The Economist,

WEEKLY COMMERCIAL TIMES

Bankers' Gazette and Railway Monitor:

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

INDEX TO VOLUME XCI.,

BEING FROM JULY TO DECEMBER, 1920, INCLUSIVE.

THE MONEY MARKET.

THE demand for money, accentuated by banks calling in special loans made until the end of the half-year, was strong up to Wednesday, though after the turn of the half-year supplies became abundant. Rumour gave the total amount borrowed from the Bank at more than 20 millions, and in consequence rates in the open market ranged from 5 to 7 per cent. While three months' bills were still September maturities, the rate therefor was $6\frac{5}{8}$ for immediate delivery, the supply being small. Business was done in September bills at $6\frac{1}{8}$ on Friday, July 2nd, when three months' bills, now due in October, were discounted at $6\frac{5}{8}$ per cent. It is believed that about one-third of the total amount of Treasury bills outstand-

ing falls due in July, and as regards the money market itself, something like two-thirds of its holding of Treasury, as distinct from commercial, bills must be due this month. The general feeling of bill buyers is one of caution, tempered by the scarcity of supply.

* * * *

As is customary at the turn of the year, the Bank return shows swollen figures. Securities ran up no less than £60 millions, and deposits were £55.4 millions higher, public declining by £2.1 millions, and other rising £57.3 millions. The stock of gold increased by £66,626, and circulation by £4,817,700, reserve consequently declining by £4,751,104. The circulation of currency notes increased by £3,344,000 to £357,356,000. A further £3,000,000 was added to the reserve of Bank of England notes, raising it to £13,400,000, so that the fiduciary issue is £315,456,000, or £5,144,000 below the maximum.

* * * *

Revenue for the quarter ended June 30, 1920, amounted to £314,986,500, which compares with £185,795,800 for the corresponding quarter in the preceding year. Expenditure for the same period totals £284,728,200 as against £401,199,100 for the quarter ended June 30, 1919. The principal contributors to Revenue were Customs and Excise, which at £71,408,000 shows an increase of £15,748,000 over the corresponding quarter last year, Property and income-tax £53,718,000, and Excess Profits Duties £56,368,000. The latter item shows a decrease of £7,423,000 over the same period. Under Miscellaneous, receipts from sales of Government surplus stores brought in £98,346,800. The balances in the Exchequer are £3,016,435 lower at £2,623,813. Sales of Treasury bonds have brought in nearly eight millions, and net sales of National Savings Certificates yielded £1,800,000. Surrenders of War Loans, Exchequer bonds, &c., under Section 34 of the Finance Act, 1917, amount to £15,811,000, while the Depreciation Fund takes £5,820,045. As will be seen from our table of Floating Debt, the total now outstanding is £1,293¾ millions, which compares with over £1,570¼ on June 30, 1919. The reduction of Floating Debt for the quarter has been nearly £18½ millions.

* * * *

There has not been much business passing in foreign exchange this week, but the closing of all banks in this country gave markets a holiday on Thursday, and most of them opened yesterday with a better tone. French francs which were fluctuating around 48 for £1 on Wednesday, were in good demand yesterday, and for cheques on Paris 46f 86c was quoted. The Amsterdam sight rate is still good, and there is some inquiry for sterling at ruling rates —11 fl 15c was about the best offering yesterday. The exchange on Berlin is not moving much, and the quotation is still 147-150 marks for £1. Italian lire are slightly better at 65¼, but exchange is not much in demand. The Scandinavian exchanges show a tendency to turn against London, and bills in Stockholm being in good supply, sterling has declined to 17k 92. The New York cable transfer rate is not so favourable, but in the absence of large operations it has not fallen below $3.96¼. China exchanges are up a little, the Hongkong rate for telegraphic transfers being 3s 8d, and that for Shanghai taels 5s 1d. Indian rupees have dropped still further, and 1s 9d is now the telegraphic transfer quotation.

A SUMMARY OF WAR-TIME FINANCE.

FINANCIAL YEAR, 1920-21 (to date) April 1 to June 30, 1920.

	£		£
Total spent	284,728,238	Raised by revenue	314,986,452
Dec. in balances	6,745,284	Net repayments	37,003,498

EVENTS OF THE WEEK.

JUNE 26TH.—Sinn Feiners kidnap General.

JUNE 28TH.—Government of Ireland Bill in Commons.

JUNE 29TH.—Revised "Normal Year" Estimates published. White Paper issued on Government railway proposals. Greeks land at the Dardanelles.

JUNE 30TH.—Conferences with Krassin broken off. Mines Bill debate in Commons.

JULY 1ST.—Banks and Stock Exchange closed. Allied conference in Brussels. Mr. Chamberlain receives deputation on excess profits duty. Debate in Commons on Transport Ministry.

JULY 2ND.—Krassin leaves London for Moscow.

THE MONETARY HALF-YEAR.

Dealers in credit have passed through a somewhat anxious period during the past half-year, because the money market has still been under official control, and its fortunes have consequently been to a great extent swayed less by actual monetary conditions, than by the view taken, in official and semi-official circles, as to what might be supposed to be to the ultimate good of the market and of the nation's industry and finance. Rightly or wrongly it was believed in Lombard street that Treasury policy, which was always supposed to be in favour of very high money rates as an assistance to war finance, was more than ever convinced of their efficacy as a remedy for the financial evils which were making the course of peace industry dangerous; and, further, that the change of governorship at the end of March brought into office a Governor of the Bank who was a convinced and determined advocate of the dear money policy. Having been startled last November by a rise in Bank rate, which was only justified on grounds which they considered as academic, discount market critics were naturally apprehensive of further surprises, and worked in a state of continued uncertainty. Their views were to some extent justified, when on April 14th the Treasury led what was believed to be its favourite suit by raising its rate for Treasury bills from 5½ to 6½ per cent., and on the next day its lead was returned by the Bank of England with a rise in Bank rate from 6 to 7 per cent. The reason for these movements appeared to be that between April 1st and the date of their occurrence holders of Treasury bills had refrained from renewing them to the extent of 63 millions, with the result that the Bank of England had had to create new Ways and Means advances to the amount of 55 millions. Critics of the movement, however, were able to point out that if the Government wanted to sell Treasury bills it was much more likely to do so by creating an impression that the rate on them was likely to go down than by putting it up. The whole market at once established itself on a higher level, and though no further advance has been made, the belief that the dear money school was not going to be satisfied until it had seen 8 per cent. caused on several occasions a reluctance on the part of the market to do its ordinary business, and kept it in a continual state of nervous discomfort. In the meantime, the taxpayer had to pay more on Treasury bills, Government financing was made more difficult and expensive (as will be seen when we come to chronicle the fate of its Treasury bond effort), and industry had to pay more for any accommodation that it needed.

On the other hand, the champions of the dear money policy have some ground for their contention that the effects of the 7 per cent. rate have justified all their arguments. Nervous discomfort in the discount market and apprehensions on the part of all who profit by cheap money that money was going to be made dearer still, may have been, as they contend, necessary steps towards the liquidation and contraction of credit, which have at last resulted in a check to the rise in prices. This liquidation and contraction were, we believe, necessary as steps to a return to normal conditions in industry and finance. Whether they could have been secured without the high rates now current it is impossible to say with certainty; all that we can be sure of is that the check to credit expansion has happened, and that the rise in prices, which was undermining the whole basis of long-time contracts, has at last been stayed. These effects may have been produced by the dear money policy, though it is at least possible that they were chiefly caused by the fact that during the March quarter Government expenditure was continually less than the revenue, and that Mr Chamberlain's Budget indicated his determination that the basis of credit, in so far as it was supplied by the Government's inability to pay its way, would be narrowed by his fiscal measures. There was always ground for belief that a balance of revenue over expenditure, combined with concerted action by the banks with a view to securing that industry rather than speculation should have the chief claim on any credit that was available, would in themselves suffice to produce the necessary check to the expansion of credit. Dear money advocates, on the contrary, maintained that rationing by the banks on the scale required was impossible under competitive conditions, and that the end to be achieved could only have been secured by the measures that were actually adopted. It is impossible to prove which of the two sides to this interesting controversy is right, and we can only express the hope that whatever policy is pursued in the future due regard will be given to the great need for caution and tactfulness that the monetary position requires. One of the worst evils of inflation is the fact that when once established the remedies for it, unless they are very carefully applied, are almost as dangerous as the disease. The ideal now to be aimed at is the cessation of all credit creation on Government account and the gradual redemption of credit so created, so that the needs of genuine industry may be met without any net addition to the total volume of credit. By this means, as production increases and credit is kept more or less stationary, it may be hoped that the ratio between goods and credit may be brought back to the equilibrium which is essential to a lower range of prices. But if too severe a restriction is dangerous, an equal danger threatens us from the arguments of those who maintain that anyone who produces any goods should necessarily have the right to raise credit against them, whatever be the state of the demand for credit and the market for goods. Such a system would evidently contain most dangerous possibilities of over-production of goods and over-expansion of credit, which might be multiplied many times against goods which had been produced and had not yet found an actual consumer.

Thanks to the apprehensions that ruled in the market of a further rise in Bank rate, and also to the caution in the purchases of bills induced by the altered aspect of the prices of and market for commodities, there has been a comfortable margin throughout the greater part of the half-year between discount rates and the price of short loans. Applications to the Bank of England, except at the end of the quarters, have not been on a large scale, and the general policy of caution has frequently expressed itself in a mass of short credit seeking employment from day to day. We subjoin our usual table showing the course of rates during the period.

The following comparisons show how the averages compare with those of the four previous years:—

Daily Average for First Half-Year.

	1916.			1917.			1918.			1919.			1920.

Government borrowing has been confined to arrangements for meeting maturing obligations. On January 20th an issue was offered of 5¾ per cent. Exchequer bonds to meet similar securities maturing during the year. This issue was distinctly successful, the Chancellor stating on March 3rd that the cash subscriptions had exceeded 60 millions, making with the conversions a total of not less

than 160 millions; from the revenue returns it appears that the total cash receipts were nearly 67 millions. On May 3rd, presumably as an answer to criticisms of the small total estimated in the Budget for the redemption of floating debt, a new issue was announced of 5 to 15-year Treasury bonds, with a minimum rate of 5 per cent. and a maximum of 7 per cent. These bonds are still on offer, and their issue has been far from successful, the total subscribed up to June 30, 1920, being only £7,930,000, in spite of the attractions offered to subscribers and appeals to reduce floating debt by applying for them. Movements in rates of foreign exchange have been violent, but have tended on the whole in the direction of a return to normal conditions. A notable feature has been the improvement of the value of sterling in New York, owing to an improvement in our trade balance, some large shipments of gold, and the good effect produced by the announcement that the dollars have already been provided for meeting our share of the Anglo-French loan due in New York in October. The following table gives the movement in the principal rates of exchange during the half-year :—

The price of gold began the year at 109s per ounce, and having touched 127s 4d on February 5th, has come down in sympathy with the improvement in the New York exchange to 104s. Silver, after beginning the year at 74d, and rising to 89½d on February 11th, has fallen with headlong rapidity, owing to the cessation of the Far Eastern demand and the measures taken by the British and other Governments to lower the silver contents of their subsidiary coinage, and is now quoted at 52d per ounce cash.

A considerable addition has been made to the Bank of England's stock of gold, chiefly owing to contributions by the other banks, this increase amounting during the half-year to 26½ millions. Against these contributions the banks have taken Bank of England notes and Treasury notes, and so have probably accounted for a considerable part of the expansion in their circulation, which has amounted to 28¾ millions and 1¼ millions respectively. The increase in the circulation of Bank of England notes, however, has been due to the extent of nearly 13½ millions to additions to the reserve held against Bradbury notes. In spite of these additions, the outstanding value of Bradbury notes is now within just over five millions of the limit imposed by the Treasury Minute of last autumn.

THE NEW RAILWAY POLICY.

The White Paper (Cmd. 787) entitled "Outline of Proposals as to the Future Organisation of Transport Undertakings in Great Britain and their Relation to the State" was published on Tuesday. In effect it deals with railways only. As to docks, the Government have no present intention of altering their status. As to canals, they are not in a position, pending the Report of Mr Chamberlain's Committee of Investigation, to formulate a policy. As to light railways, it is proposed to exclude them from the grouping arrangements applicable to the main lines, and probably to modify the Light Railway Acts so as to stimulate their development on the cheapest possible lines.

The proposed grouping of the main lines does not diverge from that which has been unofficially foreshadowed, except that the North-Eastern remains independent. The three southern companies are to be amalgamated to form one group; the three "Greats," Great Northern, Great Central, and Great Eastern, form a second; the North-Western combines with the Midland and the Lancashire and Yorkshire; the Great-Western remains separate, while all the Scotch companies form a single group. The local London lines are reserved for separate treatment later on. Each group will acquire the small lines within its territory, thus the Hull and Barnsley falls to the North-Eastern, the whole of the Welsh lines to the Great Western, and the Furness and the North Staffordshire to the North-Western group. The hope is expressed that the amalgamations and absorptions will take place voluntarily. But as the scheme depends on the amalgamations in the form laid down, failing agreements within a reasonable time, statutory powers will be taken to enforce amalgamations in accordance with the award of a Tribunal to be set up for the purpose.

To the principle laid down it is not likely that serious opposition will be offered. Indeed, the two most important amalgamations, that of the three "Greats" and that of the North-Western group, are only carrying out what the companies would long ago have done for themselves, if Parliament would have given permission without exacting too onerous concessions in return. The difficulty will be not in principle, but in the financial adjustment as between the individual companies. Personal matters also—how the new Board is to be formed, what officials will have to retire, and what places in the new hierarchy those who are retained shall occupy—will not be easy to settle. The financial basis on which the amalgamations will have to take place is not set out in the White Paper, but it is clear from the Government proposals in relation to finance and the fixing of rates hereafter what are the lines which it must follow. The pre-war situation of the respective companies, *i.e.*, in effect, their pre-war net income, must be taken as a starting point. The Government proposes that Parliament shall enact what the Americans describe as a statutory "rule of rate-making." A Tribunal, constituted presumably very much on the lines of the existing Rates Advisory Committee, is to fix and control all rates and fares, with an instruction so to fix them that they shall for each group produce a net revenue equal to the aggregate pre-war net revenue of all the companies absorbed into the group. To take a very simple instance: in 1913 the net revenue of the Brighton Railway was in round figures £1,500,000, of the Chatham and South-Eastern £2,250,000, and of the South-Western £2,200,000—a total of, say, £6,000,000. It will be the duty of the Rates Tribunal to allow the new amalgamated Great Southern to charge such rates and fares as will bring in now and in the future a net revenue of £6,000,000. The three companies in negotiating with each other will have to consider how far the net revenue shown in the accounts of each represents the true figure. It may be variable, up or down, according as a company may, on the one hand, have retained in service semi-obsolete rolling stock, or postponed necessary station reconstruction, and so forth; or, on the other hand, may have carried large sums to reserve for depreciation and renewals, or have invested capital which in 1913 had only begun to fructify. And, according as the figures work out, the total £6,000,000 will be apportioned among the three companies. Whether each company will continue to exist as a holding company, or whether there will be a capital amalgamation on the basis of the ascertained true net revenue of each, the future must determine. The White Paper is silent on the point. And more difficult questions even than these will no doubt arise. Each company is entitled to claim consideration for its potentialities. If the agriculture of Kent is developing faster than that of Hampshire, if the population of Ramsgate and Margate is growing faster or slower than that of Brighton or Bournemouth, if the suburban area of one company shows signs of more rapid growth than that of another, and the company in control of that area possesses railway accommodation either in excess, or, on the other hand, already overtaxed—all these are things possessing a definite financial value. They are, unfortunately, complex. It might take years to work them out to a final money result. But, after all, the task is not dissimilar except in magnitude from that which has to be

faced in every amalgamation scheme. Undoubtedly the persons best qualified to deal with it are those who are at present in charge of the respective properties. It is much to be hoped, in the interest not only of the public but of the shareholders themselves, that they will grapple with it promptly and boldly. It is high time from the public point of view that the railway machine, which has been working for six years under quite abnormal circumstances, should be readjusted. What suspicion and uncertainty have cost the shareholders, what it will cost them if the uncertainty continues, is sufficiently disclosed by the price to which railway securities have fallen on the Stock Exchange.

The Government, according to the White Paper, does not propose to give the companies any financial guarantee. But the proposal that Parliament shall definitely undertake that the rates and fares shall be such as—given efficient and economical management, which we may surely take for granted—will produce at least the pre-war net revenue, is in effect a guarantee. It is subject, however, to one condition, quite serious in theory, but not, we must hope, likely to be of practical importance, that any scale which can be fixed will produce the required revenue. We have heard lately, not only from the companies' side, but also from Mr J. H. Thomas, that somewhere there must be a breaking point. Higher charges might no doubt restrict traffic to such an extent as to result in actual loss of net revenue. But that point has not yet been reached. Goods rates have been put up on an average some 60 per cent. Even assuming that another 20 per cent. is imminent and necessary, an 80 per cent. increase in the charge for carriage is in the case of practically every article much less than the increase in the selling value of the articles themselves. Counting in new values, the percentage burden of railway rates to-day is much less than it was in 1913; and similarly 1½d a mile for a passenger earning £5 a week is a less tax than 1d. was to him when his wages were only £2. Of course, we cannot ignore the vicious circle. An increase of railway rates may add to the price of certain commodities and certain services. But that is inevitable.

It should be noted that shareholders are not to be restricted to their pre-war dividends. The new scheme should secure large economies, and the fruits of these economies are to be shared between the companies and the public. The pre-war dividend on the ordinary shares amounted to £17,000,000. Assuming a net economy of £10,000,000, which should surely be obtainable within a few years, and assuming the companies' share to be only one-half, this would mean an increase in the ordinary dividend of over 1 per cent. Not a great sum, perhaps; but it is an advance of 25 per cent., and the railway shareholders have never been accustomed to large returns on their money.

Proposals of the Government as to the constitution of the board of the new group companies will arouse considerable interest, and probably, seeing that they include the appointment of workmen directors, not a little opposition. The board is to consist of 21 members, of whom the majority—let us assume 12—are to represent the shareholders as heretofore. The remainder—let us call them nine—are to represent the workers; one-third are to be officials co-opted by the shareholder directors like the vice-presidents on an American railway; and the other two-thirds—say six—are to be elected from and by the workers on the railways.

It will clearly be impossible for the scheme to be brought before Parliament in the present Session. But that is perhaps just as well. Its large and far-reaching proposals need time, in order that the hundreds of thousands of ordinary shareholders, mainly small people and widely scattered, may come to understand them. When they do, we think it probable that they will be ready to accept the scheme, not, perhaps, with alacrity, but at least with thankfulness that things are not worse. They are receiving full justice. In the present position of public finance they could hardly have expected lavish generosity. They may well be satisfied to know that their pre-war income will be substantially secured; and they have good hopes that in the future their position will undergo a not inconsiderable improvement.

EXCESS PROFITS DUTY CHANGES.

It will be recalled that the Chancellor of the Exchequer, in his entirely unexpected announcement in the Budget speech that the excess profits duty would be not merely continued, but also increased in rate, endeavoured to soften down the effects by a promise of reliefs and concessions in the more anomalous cases. Of course, as the whole basis of the tax is that of pre-war profits, and we have, therefore, a charge stereotyped to altogether out-of-date conditions, the tax, however useful from a fiscal point of view, is fundamentally anomalous, and no amount of concessions in detail can improve its character. Nevertheless, the lopping off of the worst excrescences might do much to silence the critics with particular grievances, and the exact nature of the promised concessions has been eagerly awaited. Quite naturally, before each taxpayer there looms large the particular hardships of his own case, and the White Paper now published by the Government specifies four general classes of relief, and may well fail to satisfy the much wider range of particular grievances which might very reasonably have expected some redress.

We may take, for instance, the anomalous case of the rubber industry. Those concerns which were reconstructed in the "boom" years some time before the war, have not fared at all badly by the general operation of the provisions of the law reinforced by the special percentage upon capital awarded by the Board of Referees, but a considerable group of companies that did not pass through the phase of reconstruction, and whose shares may to an equal extent with the other class have changed hands, find themselves with no recognition of the actual enhancement of the value of their properties beyond the hard capital put in originally, although there is no difference between the outlay made by present shareholders in acquiring their interests. The disparity of treatment of the liability of these two classes cries aloud for remedy, but it will be extraordinarily difficult to give a remedy in general terms which will not have difficult and fiscally dangerous reactions over the remaining wider scope of the duty. Quite wisely, Parliament has hesitated to confer any favours upon particular industries in set terms in the Acts themselves, and if they had once started such a process the Lobby would have been full of sectional interests in a manner generally associated only with a protectionist tariff.

A second class of grievance for which no remedy has been afforded, is that of the concerns which had their first accounting period ending almost immediately after the outbreak of war, as, for example, at August 31, 1914. Even if the profits of that year were good they were certainly made before the war, for the month of August, 1914, was negligible from the point of view of prosperity, and the concerns suffered in two ways, for the year became an accounting period for a charge to duty, and it also formed no part of the pre-war standard, as it would have done had it ended on July 31, 1914. It is the second aspect which is continuing to hit very hard, because the businesses accidentally so placed have much lower standards than those whose accounting year ended on July 31st. Very excellent reasons guided the Government at the time in not attempting to split up the profits of the first year ending after the beginning of the war, but the disparity would seem to be, in those particularly difficult cases, now capable of some kind of remedy in the nature of a compromise. These are two of many cases which might occur to one as suitable for special treatment.

The reliefs actually to be granted by the Government relate first to new capital and to new businesses. When the excess profits duty was raised to 80 per cent., special relief was given by raising the percentage allowed on new capital by 3 per cent., so that instead of 6 per cent. for companies and 7 per cent. (afterwards altered to 8 per cent.) for firms, the rates became respectively 9 per cent. and 11 per cent. They are now to be increased to 10 per cent. and 12 per cent. respectively. These rates merely reflect the much higher interest which is being paid on commercial credit, and should go a very long way towards meeting the cry that the tax is damaging all extensions and new businesses. It leaves untouched, how-

ever, the original anomaly of the low pre-war standard. If a company had the choice between its profits standard of £6,300 and 6 per cent. on its pre-war capital—amounting, say, to £6,000—it, of course, took the profits standard. This figure now represents only half the original real value, and no attempt has been made to recognise the fact that such a pre-war standard, taken as a bedrock minimum, is becoming increasingly hard. The only remedy for this would be to increase the rate of interest for the percentage standard, and this would cut out a considerable number of profits standards by substituting for them a percentage on capital. It would probably prove rather expensive to the revenue if carried beyond an addition of 1 per cent., since the average profits of industry in the pre-war years were probably not greatly different from 9 per cent. or 10 per cent. upon capital, so that every addition would affect a considerably increasing number of businesses.

The next relief that calls for notice is what is known as "the small business relief." While in its general expression this sounds somewhat complicated, it is, in fact, very simple. It has hitherto been confined to businesses with a pre-war standard not exceeding £500, and also businesses whose profits in the accounting period did not exceed £2,000. It works like a sliding scale, so that a business with a standard of £500 making profits of £1,000 would get less relief than when its profits became £1,800. Thus, deducting the pre-war standard of £500 and the fixed allowance of £200, the excess profits would be £300. The duty would be £180 at 60 per cent., and the whole profit remaining to the taxpayer would be £820. But this original position was altered in 1917 by giving a further relief of one-fifth of the difference between profits of £1,000 and a maximum of £2,000. Thus relief in the case given would be £200, reducing the excess profits to £100, and the duty to £60, so that the taxpayer would retain £940 instead of £820. This device has now been extended to all cases where the pre-war standard is less than £2,000, and the profits are not more than £4,000. It will have the effect of giving a substantial abatement to a considerable number of businesses, and will probably cost the Revenue an appreciable sum. The White Paper gives a table from which the not too impatient reader can quickly pick out the effect upon a case approximating to his own.

The third class of relief affects, perhaps, the hardest cases of all, namely, those people whose profits were very small before the war, or those who had no business and have now gone into business with a small capital. The major part of their earnings represents their own wages or remuneration for personal effort, and very likely the most liberal rate of interest upon the actual capital involved would be a standard *pour rire*. The White Paper illustrates this with the case of a business making £200 pre-war, with a capital of £500, in the hands of two partners. It is now making a profit of £3,000 without further capital, and is liable at 60 per cent. on the whole of the profits in excess of £400. Obviously, no remedy based purely on capital can meet the case.

The Government now propose to give a substituted standard for those cases of £500 for each working partner, plus the actual statutory percentage on the capital employed, with the necessary proviso of a maximum which has been fixed at £750 per working proprietor. This limitation really means that the section of the standard which represents interest on capital cannot exceed £250, which would apply to a capital of some £3,000. This is an exceedingly important provision, and should give widespread relief. The private company which often approximates so closely to a "firm" is included, and as the interest in such a company can range from a person holding quite a small amount of stock, to a person holding the whole of it, an arbitrary limit has necessarily to be taken in defining the expression "proprietor." For the purpose of this section he falls outside the relief if he owns less than 20 per cent. of the capital, and if he does not work full time in the business. It would, obviously, be improper to allow a man to claim the relief in respect of a number of businesses in which he was interested.

The last of the reliefs is a small and quite technical matter. There are certain private limited companies which are substantially owned by their directors, and it has been necessary for these—for certain purposes relating to the remuneration of those directors—to be treated on the same lines as firms. Their treatment as firms has been extended to cover the allowance upon interest at the higher scale of 12 per cent. instead of 10 per cent., and thus a small disparity has been removed. The clauses giving effect to these reliefs do so by way of amending previous provisions, and are, therefore, not in themselves very intelligible, but it often happens that those provisions, which are most successfully drawn from the point of view of preventing doubt or litigation, are the least interesting and comprehensible from the point of view of the ordinary reader.

THE HALF-YEAR'S NEW CAPITAL.

The new capital market has continued to be very active during the past quarter, but the total of new applications at some £98 millions falls short by £37 millions of the total for the first quarter of the present year, during which period the pace was always exceptionally fast and furious. British Government borrowings this year contribute very slightly to our figures. They do not include either short-term borrowings in the form of Treasury bills or Ways and Means advances, or the proceeds of the 5¾ per cent. Exchequer bond issue, since the latter was made for the purpose of repaying existing securities. In the first half of 1919 British Government borrowings contributed no less than £324 millions to a total of £385¾ millions, but in the first half of the present year they accounted for only £17 millions out of a total of £233 millions, other purposes having absorbed £216 millions against £61¾ millions a year ago. How the totals for the first two quarters of 1920 compare with similar periods of war and pre-war years will be seen in the following table :—

New Capital Applications.

Year.	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.	Total for Whole Year.
	£	£	£	£	£
1904.....	13,905,000	50,654,000	9,547,000	42,913,000	123,019,000
1905.....	67,301,200	36,915,500	22,854,100	40,116,600	167,187,400
1906.....	30,264,800	55,059,800	10,835,800	24,012,800	120,173,200
1907.....	49,428,600	40,304,600	15,631,400	18,265,400	123,630,000
1908.....	45,287,900	64,385,600	31,541,800	50,988,400	192,203,700
1909.....	64,238,400	56,835,200	27,694,400	33,588,800	182,356,800
1910.....	99,355,600	88,721,400	28,111,600	51,250,500	267,439,100
1911.....	61,245,000	56,238,800	14,914,500	59,361,100	191,759,400
1912.....	47,965,100	62,377,500	40,687,100	59,819,300	210,850,000
1913.....	50,344,700	70,014,900	29,961,800	46,216,000	196,537,000
1914.....	97,610,200	54,739,100	20,265,200	339,908,100	512,522,600
1915.....	46,313,500	25,693,200	586,772,500	26,462,500	685,241,700
1916.....	156,251,200	131,022,500	111,578,000	186,584,700	585,436,400
1917.....	825,925,200	221,254,300	57,054,400	214,362,100	1,318,596,000
1918.....	475,258,700	220,921,500	329,674,000	367,527,200	1,393,381,400
1919.....	291,901,400	93,879,000	536,502,200	113,776,800	1,036,059,400
1920.....	135,094,500	98,011,700	..	..	..

When allowance has been made on the one hand for exceptional war borrowings in recent years, and on the other hand for the depreciation in the purchasing power of money, the figures for the past quarter and half-year are seen to be fairly high. The geographical destination of the new capital raised in the past half-year is shown below in comparison with the distribution in pre-war years :—

DESTINATION of NEW CAPITAL.

	First Half of Years.			
	1911.	1912.	1913.	1920.
	£	£	£	£
United Kingdom	16,677,000	24,159,400	20,324,400	207,742,400
British Possessions	35,576,800	27,932,200	43,002,600	21,541,100
Foreign countries.....	65,230,000	58,252,000	57,032,600	3,822,700
Total	117,483,800	110,343,600	120,359,600	233,106,200

Domestic requirements predominate in a manner contrasting sharply with pre-war experience. The purposes to which the money was applied is shown in the following analysis under 25 separate headings :—

Description.	Total First Half-year 1919.	First Quarter, 1920.	Second Quarter, 1920.	Total First Half-year 1920.
	£	£	£	£
British Government loans	324,134,700	7,460,000	9,730,000	17,190,000
Colonial Government loans	2,985,000	5,470,000	2,500,000	7,970,000
British Municipal & County loans	nil	4,750,000	20,622,500	25,372,500
Foreign railways	nil	1,116,000	nil	1,116,000
Australian mines	2,004,100	545,000	35,000	580,000
South African mines		54,700	nil	54,700
Other mines		1,603,800	195,000	1,798,800
Explorat'n, financial, & investment trust	3,663,500	4,719,900	6,472,200	11,192,100
Breweries	nil	684,700	91,000	775,700
Merchants, import'rs, &c.	568,700	1,030,000	nil	1,030,000
Manufacturing	10,075,400	39,852,600	13,175,200	53.027,800
Stores and trading	756,500	1,990,000	347,800	2,337,800
Estate and land	234,700	397,500	992,000	1,389,500
Rubber	627,900	2,834,300	1,841,300	4,675,600
Oil	293,700	3,641,200	579,900	4,221,100

Tramways and omnibus	nil	nil	34,300	34,300
Motor traction and manufacturing	4,445,300	4,937,500	1,674,000	6,611,500
Gas and water	16,000	25,000	136,700	161,700
Hotels, theatres, and entertainments	2,349,700	2,104,400	2,752,600	4,857,000
Patents and proprietary articles	393,500	645,000	100,000	745,000
Docks, harbours, and shipping	260,000	13,217,800	4,461,200	17,679,000
Banks and insurance	11,519,900	11,425,900	4,082,700	15,508,600
Miscellaneous	12,855,600	14,844,100	22,928,800	37,772,900
	385,780,400	135,094,500	98,011,700	233,106,200

The British Government borrowings included in this list comprise net receipts from Savings Certificates (sales less withdrawals) £9,260,000, and 5-15 year Treasury bonds £7,930,000. Savings Certificates brought in £7,460,000 in the first quarter, so that net receipts from this source have, owing to heavy encashments, brought in only the disappointing figure of £1,800,000 net in the June quarter. Nor is the total of £7,930,000 for Treasury bonds, in the course of practically two whole months, satisfactory. The only Colonial loan during the June quarter was that of £2,500,000 inscribed stock 1930-40 by the Government of New South Wales, on which the high yield of 6½ per cent. was offered. British Counties and Corporations have been unusually busy, nine having between them raised over £20½ millions, mainly for housing purposes, in the June quarter. A feature of these issues has been the co-operation in the case of one loan by Essex, Kent, and Middlesex, and of another by Bradford, Croydon, and Cardiff. Industrial sections have been borrowing heavily. Some of the largest individual issues to the public in the present quarter are shown below :—

Company.	Share and Amount.	Issue Price.
Lever Brothers	4,000,000 8 % Cum. "A" Pref. of £1 each	par
Waterfall (Selangor) Rubber	850,000 Ord., £1	par
Cammell, Laird	669,736 Ord. £1	par
J. Lyons and Co.	1,000,000 8% Cum. Pf.. £1	par
Anglo-Celtic Shipping	400,000 Ord., £1	par
Royal Mail Steam Packet	£900,000 Ord stock	£110%
	£900,000 Cum. Pref. stk.	par
Peek, Frean	500,000 8 % Cum. "A" Pref. £1	par
British Glues and Chemicals	666,667 Ord., £1	par
	333,334 8 % Cum. Pf., £1	par
Mann, Byars, and Co.	430,000 8 % Cum. Pf., £1	par
	215,000 Ord., £1	24/

A feature is the issue by leading industrial companies of cumulative preference shares on an 8 per cent. basis.

Banks and insurance companies figure for just over £4 millions in the past quarter. The chief issues to the public in this section were by the P. and O. Banking Corporation, who offered 250,000 £10 shares at £10 2s 6d, the London, Singapore, and Java Bank, who offered 100,000 "A" shares and 80,000 "B" shares, both of £1 each at par, and the Allied Traders' Insurance, whose issue was of 300,000 £1 shares at par.

Business Notes.

National Debt and Assets.—In a White Paper [Cmd. 780] which has just been issued the figures of dead-weight debt and various assets are brought up to March 31, 1920. Although three months after date, the delay is not so bad as it has been in past years. It is to be hoped, however, that next year the interval will be still further reduced. The total dead-weight debt on March 31, 1920, was £7,835,030,000. Other capital liabilities are recorded as £46,863,000, making the grand total of National Debt £7,881,893,000. Those who follow our table of National Debt, given on another page, will notice that though our total agrees with these figures, the items comprising the debt did not exactly correspond. This is owing to the information given in the Treasury's weekly statement of income and expenditure being insufficient to adjust the various items with complete accuracy. The value of war assets is given as £1,871,600,000. This is comprised as follows :—

ASSETS.

1. WAR ASSETS.

(*a*) Obligations of the Allies and Dominions as on March 31, 1920:—

	£	£
Obligations of Allies:—		
Russia	568,000,000	
France	514,800,000	
Italy	455,500,000	
Belgium (*a*) War	92,000,000	
(*b*) Reconstruction	5,300,000	
Serbia	20,900,000	
Portugal, Roumania, Greece, and other Allies	66,600,000	
Relief Loans	8,000,000	
		1,731,100,000
Obligations of Dominions:—		
Australia	51,600,000	
New Zealand	29,600,000	
Canada	19,400,000	
South Africa	15,800,800	
Other Dominions and Colonies	3,100,000	
		119,500,000
Outstanding obligation of India in respect of 5 per cent. War Loan		21,000,000
		1,871,600,000

The value of the Russian debt is an unknown quantity. It is a curious idea of sound finance to show this huge debt of £568 million, without comment, in the same list as the obligations of France, Italy, and other countries are recorded. As regards the claims from our late enemies, we are informed in a footnote that: "Receipts in respect of reparation from late enemy Powers are not included in these figures, and cannot be estimated until the Reparation Commission has dealt with the claims before it." In the second table of assets, which is described as "Vote of Credit and Other War Assets," an estimated value is shown of £700,000,000. This is mainly represented by surplus stores, commodities, and raw materials on hand. It is considered that out of this £700 million, £300 million will come into the Exchequer accounts as "Miscellaneous Revenue" in 1920-21. Amongst other war assets we note "Arrears of Excess Profits Duty as on March 31, 1920," amounted to £310,000,000. These items bring the aggregate of war assets up to £2,881,600,000. In addition to this sum, there are sundry other assets, amounting to £95,343,000. The principal item in the latter account is £36,500,000, the balance on Civil Contingencies Fund, which is repayable to the Exchequer.

Future Exchequer Balance-Sheet.—Our old friend the "normal year" has come into prominence again with the issue by the Treasury of a White Paper [Cmd. 779, price 1d] containing a revision of Mr Chamberlain's attempt of last autumn to estimate the revenue and expenditure in a normal year. We reprint the new estimate in full :—

TABLE I.

ESTIMATED REVENUE IN A "NORMAL" YEAR.

The following estimate is based on the scales of taxation proposed in the Budget (excluding Excess Profits Duty)—

	£
Customs and Excise	350,000,000
Motor Vehicle Duty	9,000,000
Inland Revenue (including Corporation profits tax)	590,000,000
Post Office	58,000,000
Miscellaneous	22,000,000
Total	1,029,000,000

TABLE II.

ESTIMATED EXPENDITURE IN A "NORMAL" YEAR.

	£	£
Consolidated Fund charges—		
Debt interest	320,000,000	
½ per cent. Sinking Fund	32,500,000	
Road Improvement Fund	8,400,000	
Other Consolidated Fund charges (mainly contributions in aid of local taxation)	12,000,000	
Total Consolidated Fund charges		372,900,000
Fighting Forces—	£	
Navy	60,000,000	
Army and Air Force	75,000,000	
Total Fighting Forces		135,000,000
Civil services—	£	
Class I. Buildings	9,000,000	
II. Civil administration	14,500,000	
III. Law and Justice	17,000,000	
IV. Education	73,000,000	
V. Foreign and Colonial services	3,000,000	
VI. Non-effective and miscellaneous	2,500,000	
VII. Old age pensions, Ministries of Labour and Health (including Housing subsidy)	66,000,000	
Unclassified Services. War pensions (soldiers and sailors)	120,000,000	
Total Civil services		305,000,000
Revenue services—	£	
Customs and Excise and Inland Revenue	11,000,000	
Post Office	57,000,000	
Total Revenue services		68,000,000
Total expenditure (including ½ % Sinking Fund)		880,900,000
Balance for further debt redemption		148,100,000
Total		1,029,000,000

The estimated normal yearly expenditure (£305,000,000) under the head "Civil Services" may be broadly analysed as follows :—

War pensions and allowances to disabled members of the fighting forces and their dependants	£	120,000,000
Old age pensions		28,000,000
Grants for—	Million £	
Education	70·0	
Agriculture	1·5	
Unemployment and health insurance and other health grants	17·5	
Police	10·8	
Irish land purchase	1·0	
Housing subsidies	15·0	
Mental deficiency and reformatories	1·0	
Transport development	1·0	
		117,800,000
Upkeep of museums and galleries		600,000
Scientific investigation and research		600,000
Foreign and Colonial services		3,000,000
Public buildings		9,000,000
Printing, paper, and stationery		4,000,000
Legal and Judicial Departments, Prisons, &c.		4,400,000
Superannuation allowances to retired civil servants		1,100,000
Other expenses of civil administration (excluding revenue departments)		16,500,000
Total		305,000,000

NOTE.—The supply services show an increase of £73,000,000 as compared with the figures of Command Paper 376.

The increase is accounted for as follows :—

	£
Education grants	24,100,000
Old age pensions	10,000,000
Housing subsidy	5,000,000
Unemployment and health insurance and other health grants	6,400,000
	45,500,000

The balance of £27,500,000 is mainly increased war bonus and cost of supplies.

A memorandum states that the estimates of revenue are based on the scales of taxation and Post Office charges proposed in the Budget statement, assuming that excess profits duty and abnormal receipts from war assets have ceased. The estimates of expenditure are based on the same assumptions as those of October, viz. :—That all war services will have ceased, and that trading departments (*e.g.*, food, shipping, &c.) will have been wound up; that all subsidies and unemployment donation will have been withdrawn; that no further loans will be made to Allies and Dominions; that the training schemes for ex-soldiers, &c., will have been completed, and nothing new arisen in their place; that the cost of labour and materials will not have differed materially from that now obtaining. As before, nothing is included on either side of the account for interest or sinking fund on debts due by or to Governments of Allied or associated countries; and no credit is taken for sums to be received on account of the cost of armies of occupation or for reparation. The value of these guesswork estimates is problematical. But the figures are worth studying as a record of the successive rise in contemplated expenditure in each of these Ministerial prophecies.

National Savings Report.—The fourth annual report of the National Savings Committee covers the calendar year 1919, and shows that sales of Savings Certificates in that year totalled £79,013,449, compared with £108,348,782 in 1918. Repayments in 1919 were £19,864,618, compared with £6,286,991 in 1918, the net increase in 1919 of the sum invested being £59,148,831, against £102,061,791. Considering the removal of the war stimulus the 1919 figure is quite high. It must, however, be remembered that if the report carried us right up to the present time, the record would be seriously impaired by the heavy encashments that have taken place this year. A table in the appendix to the report gives statistics of the contributions of the "small investor" to national finance between 1914 and 1919. The total of £566,631,000 is made up as follows :—Net Post Office and Trustee Savings Bank deposits, £94,671,000; Post Office issues of 4½ per cent. and 5 per cent. War Loans, £76,429,000; Post Office issues of 5 per cent. and 6 per cent. Exchequer bonds, £47,992,000; Post Office issues of 5 per cent. National War Bonds, 4 per cent. Victory Bonds, and 4 per cent. Funding Loan, £80,556,000; net sales of Savings Certificates, £266,983,000. These figures denote a remarkable achievement, and the Savings Association, in carrying on in peace time their work of nation-wide inculcation of saving and investment, will be performing yeoman service to the best interests of the nation.

Public Trustee's Report.—The twelfth report of the Public Trustee covering the 12 months ending March 31, 1920, records the heaviest accession of new business that the office has yet experienced. The total number of new cases accepted during the year was 1,950, having an aggregate value of £21,863,780, as against a previous maximum record in 1917-18 of 1,876 in number and £17,861,889 in value. At the end of the year the number of trusts under administration was 14,108, having a total nominal value of £132,320,453. The cost of the trust administration during the year exceeded the revenue from this source by £95,975. This formidable deficit follows on deficits of £3,092 in 1916-17, £23,318 in 1917-18, and £55,962 in 1918-19. The growth in the deficit emphasises the necessity for the new scale of fees, which, as will be remembered, has been authorised, but did not come into force until April 1, 1920. It is hoped that the higher scale will breach the gap, and the Public Trustee states his hope that the scale will admit of reduction if prices fall substantially. He "sees no indication that the new scale of fees is likely to prove prohibitive to the public, or even to constitute a deterrent. New work is flowing in steadily, and there are no signs whatever of any substantial diminution in new business or of any general desire to withdraw existing business." The following statement shows the business transacted since 1908 :—

The Liberty National Bank
of New York

Accepts deposits drawing interest from foreign banks, firms and individuals.
Buys and sells drafts, and cable transfers on foreign countries.
Furnishes credit and trade information to foreign firms desiring to buy or sell in the American market.
Finances foreign shipments, secures customers against loss in exchange subject to approval of the transaction.
Buys and sells American and foreign securities.

The investments of estates under administration at March 31, 1919, totalled £111,714,074, against this year's figure of £132,320,453. A special administrative staff of 255 is employed on the work of custodianship of enemy property. The Manchester office, since its opening six years ago, has accepted 1,321 cases, valued at £9,982,270.

Cotton Trade and Short Time.—Our Manchester correspondent writes:—The depression in the Lancashire cotton industry has been discussed on a considerable scale in Manchester commercial circles during the past week, and it is understood that at the ordinary monthly meeting of the general committee of the Master Spinners' Federation to be held yesterday (Friday) the state of trade would be considered. Individual members have represented to the Federation that some action is necessary in order to bring about relief, and it is possible that at yesterday's meeting a proposal would be made in favour of organising curtailment of yarn production on a definite scale. This policy has been adopted in the past by the Federation, and has often brought about the desired result. It has been used to recommend spinners to work shorter hours during a period of three months. Of course, in pre-war days the working hours were 55½ per week, whereas there is now a 48-hour week. Some firms are of opinion that the position of affairs is not quite bad enough for united action at present, but, on the other hand, certain members urge that something should be done before matters become worse. The last occasion on which the Masters' Federation adopted short time was in 1914, when it was decided that between the beginning of July and the end of September all mills engaged on American cotton should curtail output to the extent of 166½ hours, or the equivalent of three weeks. The scheme, of course, was disorganised when the war broke out.

Cost of a Small House. — Sir Kingsley Wood, at a meeting of the Parliamentary Housing Committee on Wednesday last, referring to houses built under the supervision of the Ministry of Health, stated that the average cost of houses of different types included in lump sum contracts was increasing. It was now £817, as compared with £727 up to the end of last year, whilst the average cost of parlour houses was £862, as against £789. In rural districts the respective figures were £794 and £699. At Newbury the cost of the first four houses had worked out at £761 per house, but this was before the recent increases in wages, and the cost of subsequent houses would doubtless be more. It was considered that in the present ascertained cost sufficient allowance had not been made for overhead charges.

Home Rails: a Market View.—Stock market views on Sir E. Geddes' proposals (which we discuss elsewhere) are summed up as follows by a Stock Exchange correspondent:—The Home Railway market had been keyed up to a mild degree of anticipation, on the hope that the Government's scheme for the conduct of the railways would disclose details likely to prove at least satisfactory to the proprietors of the stocks. A good deal of faith was reposed in the idea that such a practical railwayman as Sir Eric Geddes would evolve a workmanlike scheme to give the railway companies a fair amount of working profit, and at the same time enable the stockholders to look forward to improvement in dividends and prices as time went on. The appearance of the White Paper disappointed to some extent the slight optimism which had prevailed in advance. At first sight the scheme received a fair amount of commendation, and some of the jobbers in the Stock Exchange welcomed it as holding out hopes of such substantial reduction in expenses as could not fail to be reflected in net revenue. To this the critics replied that in the absence of further information, it looked as though the Government intended to come in as a participant in any improvement in earnings, while, if the companies did less well than they expected to do, the Government would shoulder none of the liability. In spite of the strong declarations which have been made against nationalisation, the White Paper is held to contain a colourable imitation of a nationalisation scheme in the way it proposes to give the men a direct interest upon the boards of the various groups. The grouping itself is regarded as anything but satisfactory, although the critics frankly admit that when the details come to be worked out more closely, such an objection may disappear. As to whether the group system will turn out well, there are divided opinions. With the large number of railways in the United Kingdom, it is maintained that the group classification will be an extremely difficult matter, while in regard to the prices at which the various stocks will be assessed under any such scheme, speculation is entirely at sea. The practical effect, therefore, upon the market has been to leave Home Railway prices a shade easier than they were before, with a lowering of values in the cases of the southern lines, while the Heavy stocks also yielded ground to some extent. Vague and indefinite a good many men call the present proposals, and until further light is obtained upon a number of complicated and difficult points, the majority of Stock Exchange autho-

rities—at any rate, so far as is at present ascertainable—prefer to suspend any judgment other than the admittedly hasty one that the scheme, as outlined at present, is not likely to prove of great benefit to the patient stockholders.

The Presidential Election in Chile.—Señor Luis Barros Borgoño (Conservative) was definitely elected President of Chile on Friday of last week for the five years' term commencing next December, by 178 votes, against 177 given for Senor Alessandri, the Liberal candidate. The majority was at first stated to be 10, but a recount was demanded, with the above result. The actual election is conducted, as it nominally is in the United States, by a body whose members are chosen by the Congressional electorate in the Departments, which are also the constituencies for the Lower House of the Legislature, and the result seems to indicate that the final stage retains some of the reality which its North American archetype has lost. As to the geographical division of opinion, no information is available. The exchanges improved on the announcement of the election, and we understand that the foreign business community is satisfied that its interests are safe in Senor Borgoño's hands.

Explosives Trades Report.—The first report of the great combine of 11 well-known companies connected with explosives manufacture, which was formed at the close of 1918, is issued this week. Net profits to December 31, 1919, are shown as £1,655,242, but it should be noticed that the receipts include the dividends received from the constituent companies out of trading profits for the year 1918 (which was before the combine began operating), as well as the dividends payable by them for the trading

THE REVENUE.

I.—An Account of the Total Revenue of the United Kingdom in the undermentioned periods of the Year ending March 31, 1921, as compared with the corresponding periods of the preceding Year.

	Quarter from April 1 to June 30, 1920, compared with the corresponding Quarter of the preceding Year.			
	Quarter ending June 30, 1920.	Quarter ending June 30, 1919.	Increase.	Decrease.
	£	£	£	£

Exchequer Receipts from Treasury Bonds to June 30	7,930,000		

*Includes £606,000, the proceeds of which were not carried to the Exchequer within the period of the account.

year 1919. Of the above sum, preference dividends take about £252,587, while the ordinary shares, which received a 9 per cent. distribution in July, 1919, receive a dividend at the rate of 10 per cent., the two distributions together absorbing £993,034. A 5 per cent. dividend is declared on the deferred shares, which takes £50,372. Preliminary expenses are written off to the tune of £127,775, and £231,473 is carried forward, while the directors state that "substantial amounts have been placed to reserve out of profits by the various constituent companies." The report further announces that: "The policy outlined at the inception of the company, involving the rapid transition from war conditions to peace industries, with general consolidation and reconstruction, and the extension of the company's interests into a wider range of activities, has been vigorously pursued, with encouraging prospects for the future." The balance-sheet shows issued and paid-up capital at £14,844,926, while on the other side of the account "cost of shares in constituent companies and other allied interests" is entered at £15,708,437. The whole of the preliminary expenses having been written off in these first accounts, the directors will presumably devote reserve allocations in the coming years to writing down these investments, which were acquired during the industrial boom.

"Shell" Transport and Trading.—In spite of its increase of capital from £10,039,791 in 1918 to £14,857,641 in the past year, the accounts of the "Shell" Transport and Trading Company, Limited, just published, show that the dividend of 35 per cent., free of income-tax, on the ordinary shares is maintained. A comparison of results for the past seven years is given below:—

	1913.	1914.	1915.	1916.	1917.	1918.	1919.
	£	£	£	£	£	£	£
Balance forward	265,194	326,564	436,796	420,302	450,384	1,239,032	1,136,877

	1,849,383	2,001,981	2,164,696	2,126,146	3,225,015	4,132,635	5,899,601
Expenses, &c.	46,124	37,935	55,378	47,948	40,702	40,659	49,354
Interest on loans	..	..	..	98,798	95,870	..	..
Balance	1,800,259	1,966,046	2,109,318	1,979,400	3,088,443	4,091,976	5,850,247
Pref. dividend	81,250	100,000	100,000	100,000	100,000	100,000	100,000
Ord. dividend	1,389,283 (35 %)	1,427,251 (35 %)	1,429,016 (35 %)	1,429,016 (35 %)	1,749,411 (35 %)	2,813,927 (35 %)	4,507,625 (35 %)
Reserve, &c.	3,162	..	160,000	..	..	41,172	..
Balance forward	326,564	436,796	420,302	450,384	1,239,032	1,136,877	1,242,622

The dividend on the ordinary shares is paid free of income-tax. During the past financial year 750,000 shares were issued in New York at a premium of £4,390,625. Of this sum the directors have placed £4,000,000 to reserve, bringing the total of reserve fund to £5,000,000. The balance of £390,625 has been placed to a securities depreciation account. Total assets now amount to £25,958,433 as compared with £15,535,863 last year, the principal increase being a big jump in "investments" from £2,764,923 to £8,112,506. The balance-sheet will be found fully analysed in another column.

Booth Steamship.—During the year the issued ordinary capital of the Booth Steamship Company, Limited, has been doubled, jumping from £500,000 to £1,000,000, and though net profits, as disclosed in the reports of the company, are lower, the rate of dividend on the ordinary shares has been maintained at 5 per cent. A summary of results for the past eleven years is appended:—

March 31.	Gross Profit.	Depreciation.	Deb. Int.	Net Profit.	Res'rv's &c.	Pref. and Ord. Div.	Ord. Rate.	Carried Forward.
	£	£	£	£	£	£	%	£
1910	236,008	126,230	18,000	89,575	50,000	41,500	10	26,324
1911	192,302	84,562	18,000	87,539	50,000	41,500	10	22,393
1912	170,450	96,522	18,000	53,724	nil	41,500	10	34,587
1913	265,299	135,647	18,000	107,452	52,000	41,500	10	50,539
1914	154,821	104,759	18,000	29,859	nil	16,500	nil	63,897
1915	225,267	131,885	18,000	38,190	nil	41,500	10	60,587
1916	328,123	128,857	18,000	179,060	100,000	41,500	10	98,147
1917	351,202	191,081	18,000	142,043	100,000	41,500	10	98,690
1918	217,358	76,867	11,304	128,291	100,000	41,500	10	86,381
1919	224,313	80,014	8,876	133,214	100,000	41,500	5	78,095
1920	..	..	8,725	125,718	50,000	66,500	5	87,313

Unfortunately, profits this year are given after allowance has been made for depreciation, and, in consequence, our table is to this extent incomplete. Amongst assets which have been written down, it is satisfactory to notice that the item, "Alfred Booth and Co., Limited," has been reduced from £801,000 to £669,000. Total assets have increased during the year from £3,059,472 to £3,236,584.

African and Eastern Trade Corporation.—The African and Eastern Trade Corporation, Limited, is probably better known to many as the African Association, Limited. The title, however, has now been changed, and in the thirtieth annual report and balance-sheet, which has just been published, figures are given which reflect the activity of the board during the past year in its policy of expansion. In 1919 controlling interests were acquired in F. and A. Swanzy, Limited, Loders and Nucoline, Limited, W. D. Woodin and Co., Limited, the Lagos Stores, Limited, the African Traders' Company, Limited, Miller Bros (of Liverpool), Limited, and Millers, Limited, of London. After allowing for income-tax, excess profits duty and other contingencies, profits for the year are £1,001,618, and to this sum must be added the balance brought forward from last year's accounts, amounting to £36,225. This gives a total available for distribution of £1,037,844. For the previous year profits were £169,876. Total assets have increased from the comparatively modest amount of £2,474,100 to £13,288,303, while reserves, which were recorded at £149,772, a year ago, are now given as £5,276,715. The authorised capital has been increased to £10,000,000, of which £4,504,216 has been issued. The biggest item amongst assets is "investments in shares and debentures of other companies" at £6,759,636. This item is divided into two parts, viz., "allied and subsidiary companies," £6,689,823, and "miscellaneous," £69,813. We think that the directors might be a little more informative on the nature and value of these investments. Are those with market quotations taken at cost or at market value?

Spiers and Pond.—The thirty-sixth annual report of the directors of Spiers and Pond, Limited, shows that this undertaking continues in the prosperous course of its new career. Including the sum of £15,355 brought forward from last year's accounts, net profits available for distribution amount to £140,301. The directors, in accordance with Clause 75 of the articles of association, take an additional £5,000, while £40,000 is added to reserves and £3,000 is placed to a staff provident fund. Ordinary shareholders receive a dividend at the rate of 12½ per cent. as compared with 10 per cent. last year, and £15,652 is carried forward to next year's accounts. During the year the nominal capital of the company was increased to £850,000. The issued capital now amounts to £692,829, being an increase of £198,317 on the year. Of this sum £98,902 was distributed as bonus shares to shareholders, and £99,415 was issued for cash. The report states that "no settlement has as yet been arrived at with the Government in respect of the occupation of various properties which were requisitioned during the war, and no credit has been taken into the accounts in respect thereof." It is to be hoped that a speedy settlement of accounts with the Government will be arrived at. The balance-sheet will be found analysed in another column.

THE National Association of Merchants and Manufacturers will be inaugurated, and a meeting of business men to call for retrenchment in public expenditure, and to protest against State control of trade, will be held in the Dover Room at the Cannon street Hotel, E.C., on Wednesday, July 7, 1920, at 3.30 p.m. The chief speaker will be the Right Hon. Lord Emmott, G.C.M.G., G.B.E., and the chair will be taken by Sir Hugh Bell, Bart., C.B. Admission will be by ticket, which can be obtained on application to the National Association of Merchants and Manufacturers, 14 Mincing lane, E.C. 3.

Oversea Correspondence.

UNITED STATES.—TREASURY CERTIFICATES AT 6 PER CENT.—NEW ISSUES—BUSINESS OUTLOOK.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 18.

WHILE events in the financial market were somewhat overshadowed by the Republican Convention at Chicago, which finally succeeded in nominating a more or less acceptable Republican candidate for Presidency, there were, nevertheless, several important announcements. Unquestionably the new issue of U.S. Treasury Certificates was of the most widespread interest. The loan consisted of two issues, both dated June 15, 1920, one lot payable January 3, 1921, bearing interest at $5\frac{3}{4}$ per cent., and the other maturing June 15, 1921, at 6 per cent. The highest previous rate on Treasury Certificates was $5\frac{1}{2}$ per cent., and while the new issue at $5\frac{3}{4}$ per cent. and 6 per cent. was readily absorbed, it was attended with the inevitable readjustment of all short-time certificates to approximately a 6 per cent. basis. This feature, indeed, has been a prominent characteristic of the entire securities market for the last year. Each new issue among rails, corporate or municipal securities has marked a new low level, and the prices on the mass of outstanding similar loans immediately shrunk to a corresponding basis.

Two new interesting railroad loans were successfully placed during the current fortnight. The Chicago and North-Western Railroad Company brought out $15,000,000 ten-year 7 per cent. secured gold bonds, maturing June 1, 1930, at par and accrued interest. The loan in addition to being a direct obligation of the company will be secured by the deposit of $15,000,000 Chicago and North-Western first and refunding gold 6's and $2,500,000 general mortgage 5's. This loan was entirely disposed of before the publicattion of the prospectus. The same good fortune was accorded to an issue of $15,000,000 Southern Pacific 7 per cent. equipment trust certificates, maturing serially in equal annual instalments from June 1, 1924 to 1935. The certificates were issued at prices ranging from par on the first maturities to 101 on the long bonds, and were very readily absorbed. The American Sumatra Tobacco Company issued $6,564,000 $7\frac{1}{2}$ per cent. sinking fund gold notes, maturing 1925, at a price to yield 8 per cent. These notes are the general obligation of the company, which has net tangible assets equal to 370 per cent., and net current assets of about 200 per cent. of the note issue. Among foreign bonds, the only new issue offered directly in United States was the 6 per cent. French Railway bonds, guaranteed by the French Republic, and payable in francs by 1954 at par. Subscriptions were called for by an international group at the rate of $40.00 for each 500 franc bond, and the issue was considered attractive at the rate. Trading in German municipal securities has fallen off considerably. After the recent rise in marks, which put the bonds up from around $15.00 a 1,000 marks to $35.00, a slump came, and issues eased off on the average of around $25.00. The acuteness of the Japanese situation has at length made itself apparent in the price of Japanese 4's and $4\frac{1}{2}$'s, and a consequent diminution in the volume of turnover has resulted at lower prices.

British issues held firm. The fact that the United Kingdom has repurchased in this market something over $200,000,000 of her share of the Anglo-French loan has held the price of this issue close to par, though the average discount at which these bonds were bought in was so substantial that a very handsome turn was made on behalf of the British Treasury. General conditions still indicate a settling of prices in commodities and labour though necessities have held up, and in some instances advanced. Labour and commodities directly involved in the production of luxuries, however, have suffered reductions of an almost panicky nature. Indications are that there will be little change in the trend until after the November elections, when the political horizon will have been made clear enough for business and industry to dare to formulate some definite policies.

FRANCE.—INTERNATIONAL CONGRESS—RESTORATION OF DEVASTATED REGIONS — FOREIGN TRADE—THE BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, June 29.

THE event of the week in Paris has been the first congress of the newly-formed International Chamber of Commerce, which met at the Sorbonne, under the presidency of M. Clementel, former Minister of Commerce. The countries represented on the new organisation include, in addition to France, Great Britain, Belgium, the United States, and Italy, all of which sent well-known leaders of industry as delegates. At the time of writing the Congress is still sitting, and its conclusions are not as yet available. Some idea of the subjects under discussion and the treatment accorded to them may be gathered, however, from a long resolution voted by the Finance Committee of the Chamber. This resolution, after urging that the governing body of the Chamber should take up with the various Governments the question of securing legislation for an agreement to be come to between the Allied Powers, "with a view to enabling private persons and companies to avoid being compelled to pay income-tax twice over on the same income," contained the following paragraphs :—

> That a special commission of the Chamber be appointed to consider the opportunity for establishing a bureau for the exchange of foreign credits on the basis of reciprocal exchange with such countries as may desire to make use of them for their exports, and for the subsequent development of their activities;
>
> That the International Chamber of Commerce is of opinion that it is the duty of vendors in all the countries that have fought side by side as allies during the war to do all that is compatible with business principles in the way of extending the greatest possible facilities for credit to buyers in the Allied countries during the period of reconstruction;
>
> That the attention of the Congress is attracted to the existing inequality of treatment accorded to foreign banks under the laws of the various countries;
>
> That this Congress consequently suggests that it is desirable to seek practical amendments with a view to ensuring such advantages as may be agreed upon by means of reciprocal privileges.

Some details of the progress of the industrial restoration of the devastated regions were laid before the Congress by M. Eugène Schneider, the head of the Creusot undertaking. He showed that on April 1st last, out of 3,363 industrial establishments employing at least 20 persons that had suffered damage by the war, 2,412, or 71.7 per cent., had resumed work, as compared with 706 on July 1st last year and 1,560 on December 1st. In 1914 these factories employed 668,000 hands; in 1920 they are employing 235,000, or 35.2 per cent. of the former total. The situation is at present best, M. Schneider stated, in the textile industry, where 43.3 per cent. of the workers have returned to work, as compared with 1914. The resumption of work has been particularly rapid in the Lille district, where 78 per cent. of the factories have restarted, employing 78,000 workers, or over 54 per cent. of the 143,000 employed in 1914. In the woollen industry in the Lille region especially high results are shown, as the factories are employing already 79 per cent. of their pre-war *personnel*. At Tourcoing the working-class population reaches as high as 83 per cent., and at Roubaix 84.3 per cent. of the pre-war number. In the metallurgical industry the results so far achieved are not so favourable, the number of employees being only $24\frac{1}{2}$ per cent. of the pre-war effective. In the chemical industries $39\frac{1}{2}$ per cent. are at work, and in the factories devoted to alimentation only 20 per cent. After quoting the figures published in the *Economist* a week or two ago showing the number of acres that have again been brought under cultivation in the devastated area, the number of houses that have been rebuilt, &c., M. Schneider pointed out that an enormous amount of work still remains to be accomplished, and that many months will be required to restore the North and East of France to its normal state, particularly in view of the present dearth of materials, labour, and money. Contrasting the situation of conquered Germany with victorious France, he drew attention to the fact that 65 per cent. of the German metallurgical establishments are already working again, while only 25 per cent. of those in France are able to work, owing to lack of the coal.

A remarkable report which was presented to the

Chamber on Saturday shows that the working of the French Food Controller's Department has so far resulted in a loss to the country of 6,000,000,000f. The report cites an opinion of the auditor of the departmental accounts, who, after pointing out various defects in its management, states that one of the most serious of these was that the national revictualment operations had contributed to raising the rate of exchange "in such a way that the revictualment department, instead of combatting the high cost of living, had tended to increase it." Irresponsible officials, the report complains, had signed contracts which they would certainly not have signed on their own account, and had accepted risks they would have refused to take personally. With such a system, the auditor states, any private enterprise that acted in a similar manner must have gone into bankruptcy.

The expected general fall in commodity prices has so far been confined almost entirely to wholesale dealers, and up to now has not reached the general public. At a mass meeting of retail tradesmen on Monday fears were expressed that unless drastic steps are taken by the Government to ensure that the large stocks which are known to exist are forced on the market serious disorders may be anticipated during the coming winter. It was also pointed out that retailers who have not restricted their purchases to the absolute minimum may find it impossible to meet their payments. Resolutions were passed calling for energetic measures to be taken to bring down the cost of living, urging all retailers to restrict their purchases, "as the sole means of bringing out the stocks that have been illegally constituted, and of facilitating the resumption of the free play of supply and demand," and insisting on manufacturers and producers of foodstuffs lending their co-operation to reducing the cost of living, "a national question closely bound up with the economic restoration of the country."

The returns of foreign trade for the first five months of 1920 compare as follows with the same period of 1919 :—

IMPORTS.

	First Five Months, 1920. Francs.		First Five Months, 1919. Francs.
Food materials	3,287,476,000	..	3,255,157,000
Materials necessary for industry	6,393,936,000	..	4,669,607,000
Manufactured articles	3,359,841,000	..	3,189,649,000
Total increase in 1920	13,041,253,000	..	11,114,413,000

EXPORTS.

Food materials	577,877,000	..	242,977,000
Materials necessary for industry	1,586,332,000	..	326,397,000
Manufactured articles	3,588,016,000	..	1,344,621,000
Parcel post	218,599,000	..	202,363,000
Total	5,970,824,000	..	2,116,358,000

The increase in the value of imports amounts to 1,926 million francs, but as against this the increase in exports amounts to 3,854 million francs. Of this increase 2,243,395,000f comes from the export of manufactured articles. This is the more significant as the strikes of last May interfered with foreign trade.

The Bourse has again had as its most striking factor the appreciation of the French franc, and there is considerable discussion as to how far this has been justified and how far it is due directly to speculation. There is a general feeling that the economic condition of France has shown very marked improvement. The effect of the depreciation of foreign currency has been to cause a fall in the value of many foreign securities, and in consequence the Bourse generally has been rather more depressed. The French 3 per cents. have been dull at 57.30, as against 58.80; the 5 per cents. are well supported at 88.20, and the 1917-18 4 per cents. are fairly sought after at 71.05 and 71.70 respectively. Banks generally have shared in the depression; Banque de France, for instance, dropped from 5,775 to 5,700, and Banque de Paris from 1,579 to 1,530. Railways and shipping are depressed, Nord being at 1,005 as against 1,050, Suez has dropped from 6,900 to 6,280, and Messageries from 508 to 495. Metallurgical undertakings have responded better than most, Longwy being rather stronger at 2,170, as against 2,070, Chantiers de France rising from 730 to 761, and Nord et Est from 2,700 to 2,800. Tintos are back from 1,750 to 1,705, and Boleo from 969 to 930.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows :—

GERMANY.—CABINET—BANKS—BOURSE—DEFICITS—BUSINESS—COAL AND IRON.

(FROM OUR CORRESPONDENT.)

BERLIN, June 24.

THE negotiations carried on by the former National Assembly President, Herr Ferenbach, for a Coalition Cabinet of German People's Party, Centre, and Democrats, which were nearly completed early this week, broke down, owing to trouble with the first-named party and the Social Democrats, and, after resumption, are not yet concluded. Last week the attempt to create a Majority Cabinet failed. The Cabinet which Herr Ferenbach is now trying to form will be a Minority Cabinet; and as the Socialists will in no case go further than accord general support, without committing themselves to particular measures, its prospects of life and fruitful activity are small.

The reports of the banks for the business year 1919 show the extraordinary extent to which the currency inflation has affected private and industrial finance. All the chief banks report tremendous increases in deposits, bill transactions, and Bourse commission work, and all report enormously increased profits, and, with one exception, increased dividends. The normal proportions between capital and deposits have been altogether upset. Here Germany differs from Austria, where last year and this, under similar conditions, the banks largely increased their capitalisation. The German capital totals are very little changed. The comparative figures (million marks) for the last two years and for before the war of the chief banks show how great is the inflation :—

	1913.		1918.		1919.	
	Capital and Reserve.	Deposits, Accepts., and Credits.	Capital and Reserve.	Deposits, Accepts., and Credits.	Capital and Reserve.	Deposits, Accepts., and Credits.
Deutsche Bank.....	315	1,580	505	6,740·1	510	13,822
Disconto-Ges.	281·3	674	444	3,649·3	450	8,191·3
Dresdner Bank.....	261	958·3	340	4,150·8	340	8,126·1
Darmstaedter Bank..	192	607·6	192	1,999·9	195	4,096
Berlin Handels-Ges..	144·5	296·8	144·5	569·6	144·5	961·6
Commerzbank	99	315·9	102	1,317·8	104·5	2,128·4

The ratio of public money to capital in the Deutsche Bank rose between 1913 and 1919 from 5 to 27, in the Disconto from 2.4 to 18, in the Dresdner from 3.6 to 24, and in the Commerz from 3 to 20. The banks' chief investments last year were in Treasury bills of the Republic and of the States. The holdings of these as compared with 1918 have greatly increased: by the Deutsche from 4,616.8 mil. m to 9,733.5 mil. m, by the Disconto from 1,975 mil. m to 4,236 mil. m, and by the Dresdner from 2,731.8 mil. m to 4,390.8 mil. m. As compared with 1913, the increases are between 12 and 17 fold. Naturally, the profits recorded from interest are very large. Further, the "Catastrophe Boom" in stocks, with enormously increased dealings (for three days a week the Berlin Bourse had to be closed to enable the banks to keep up), accompanying a great rise in quotations, yielded big commission profits, and the freeing last summer of trade in foreign exchange brought the banks further profits from the resulting widespread exchange speculation. Economically the banks' reports must be considered a melancholy record of paper unrealities.

The individual reports of the chief banks are summarised as follows (million marks) :—

	Gross Profit.		Net Profit.		Dividends.		
	1919.	Surplus Over 1918.	1919.	Surplus Over 1918.		Per Cent. 1919.	Per Cent. Over 1918.
Deutsche	213·3	77·9	62·5	14·9	33	12	..
Disconto	128·4	71·8	53·2	19·7	31	10	1
Dresdner	135·6	62	50·7	16·6	23·4	9	2
Darmstaedter	85·1	43	20·8	11·5	12·8	8	2
Berlin Handels-Ges	29·4	11·8	16·2	4·4	11	10	2
Commerz	43·3	19·1	16	7·2	7·65	9	2

The banks all report heavily increased expenditure on taxes and administration, amounting as a rule to about 50 per cent. over the figures of 1918, and the ratio of these items together to the gross profits has in all cases increased.

The Bourse continues to wait on the foreign exchanges, and as these during the last week oscillated around a point slightly above the low record of late May, no material change took place in the general stock level. The repeated failures to form a Cabinet had little effect, but to-day (24th) a rise in the exchanges induced firmness, chiefly in oil stocks. Oil stocks have shown activity in connection with a report that the Roumanian holdings of German companies would be liquidated, bringing in considerable cash sums. On this report the speculative Deutsche Erdoel yesterday rose 80 per cent. to 960, and to-day touched 1,000. German Petroleum Company rose in sympathy. There is also considerable activity in shipping shares, Hamburg-America, which lost several points yesterday, making a sharp rise to-day. Yesterday the Bourse opened weak owing to revelations of new deficits in Post and State Railway finances. The Finance Minister, Dr Wirth, reported to the Reichsrat that the railway deficit for the year, estimated two months ago at 11 milliards, would, on basis of present price conditions, reach 15 milliards, and that a further increase is inevitable. The increase will be partly due to the fact that some of the larger States have ignored the Federal Wages Law, and legalised higher wage standards for their own employees, compelling the Republican Government to follow suit. A further general wage rise seems indicated by the fact that the cost of living shows no sign of following the fallen raw material prices, which, in view of the inflation, is inevitable. The Reichsbank report for June 15th shows an increase of the note circulation by 631.8 millions to 50,648.6 millions, and decrease of the Kassenschein circulation by 6.5 millions to 13,560.7 millions. Over the high food prices serious riots took place this week in several centres; elsewhere, workmen are resisting the enforcement of the clause in the new income-tax law which requires employers to deduct the tax before paying wages; and from Munich come reports of attempts to organise a general strike all over the country.

The industrial stagnation shows signs of aggravation, although the price fall in industrial products has been checked by the stoppage of the upward movement in mark exchange. The crisis has gone so far that large numbers of firms are threatened with bankruptcy. Many are taking advantage of the war contracts law of 1916, by refusing to accept delivery of goods ordered at the high prices of three months back. This is a reversal of conditions of the late winter, when manufacturers, hit by the rise in production cost, were refusing to deliver. Many lawsuits on the latter practice, both with natives and foreigners, are pending. Norwegian papers report that the Christiania Chamber of Commerce investigated 55 such contract breaches with Norwegians only, and the Chamber of Commerce of Malmö in Sweden has drawn up a protest to Elberfeld over similar practices. The legality of refusing acceptance is also being contested. It is stated that many of the refusers have made themselves defendants in litigation known to be hopeless merely in order to gain time, in the hope that a new price rise will make it possible to sell the ordered goods without loss.

The coal situation has somewhat improved, but is far from satisfactory. The improvement is chiefly in the supply of railway cars. In the last week of report from the Ruhr there was no deficiency of cars at all. The stocks at pit's mouth have decreased. The supply of canal barges has also improved, and water-level conditions on the Rhine have favoured transport southwards. Scarcity, however, continues in South Germany. The market for certain iron products, bar-iron, sheets, and tubes has also been damaged by the stagnation, particularly in South Germany, and prompt delivery can now be had. A pessimistic report is issued as to the prospects of the machine-tool industry, the trouble here being the risen mark exchange, which continues to check export orders. One of the largest electric plant companies states that numerous planned extensions of power stations have been abandoned owing to the high prices, and that not much business can be expected as long as a single steam turbine costs more than a whole power-station, with buildings and offices, cost before the war.

SWITZERLAND.—SWISS MILK PROFITS—TWO BANK ISSUES.

(FROM OUR CORRESPONDENT.)

GENEVA, June 27.

THE Nestlé and Anglo-Swiss Condensed Milk Company, which held its shareholders' meeting yesterday, distributes for the year 1919 a dividend of 65f per share of 400f nominal. During 1919 the share capital was doubled, and now amounts to 160 million francs. The net profit amounts to 34.5 millions, as against 30.9 millions in the previous year, when the share capital was only 80 millions. The outstanding features of the balance-sheet are a considerable increase of liabilities (by 86 millions), and of goods in stock by 102 millions. After the demobilisation of the Allied armies, the factories lost the best and most promptly paying customers of the last five years. The hastened liquidation of huge American stocks of condensed milk, combined with the depreciation of most of the Continental exchanges, rather handicapped the reconstruction of the sales organisation in Europe. On the other hand the sale in some non-European countries was rather good.

The Swiss Bank Corporation and the Comptoir d'Escompte de Genève are both in the capital market, each asking for the sum of 20 million francs. Present

conditions in the Swiss capital market are uncertain, even the cantonal and communal treasuries with the best financial record having met with disagreeable failures with their last issues. First-class Swiss securities in the stock markets can now be bought to yield up to 8.5 per cent. interest. The Swiss Bank Corporation offers on its new shares a yield of not less than 9 per cent. to the old shareholders, to whom the price is par, while to the general public the price is 102 per cent. The Comptoir d'Escompte, which distributes a dividend of 10 per cent., offers its new shares to the old holders at 115 per cent. and to the public at 120 per cent. This striking difference in the terms offered by these banks proves clearly the difficulty of judging the mentality of the public in the leading financial circles of the country.

SWEDEN.—INDUSTRIAL OUTLOOK—SPIRIT DUTY—EXCHANGES—SOVIET CONTROL OF COMPANIES.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, June 21.

FOR the last month or two the depression in trade and finance in this country has been greater than ever, and stock values in all departments have gone down considerably. Taking a summary of the present total value of the share capital of 31 of the leading concerns in Sweden, one arrives at an absolutely record bottom figure, viz., 361.54 million kr, the previous lowest figure—469.8 million kr—being reached in November last year. The loss has been sustained in the manufacturing industry. The troubles which this industry has to face in, as it seems, continually increasing degree, are labour difficulties and the impossibility of getting sufficient fuel at a reasonable price. The coal question is now even worse than it was during the war, and prices have reached an unexpected high level. The inability of English coal mines to deliver anything approaching sufficient supplies has forced importers to seek other markets, preferably North America and South Africa; it is also reported that a big contract has been made with Australian shippers. Labour is still very unsettled, and as soon as one agreement is reached others have to be revised. The great strike in the mining industry has been partially settled by an agreement with the workmen at Grangesberg, Central Sweden, but in the big Lapland mines and its shipping outlets, Narvik and Lulea, work is partly idle. A rumoured threat by German sailors to declare a sympathetic strike will, if realised, have the most disastrous effects. A calculated deficit of 41 million kr in the State Budget for next year is proposed to be covered by a fresh Excise duty on spirits, which is to be collected at the rate of 25 per cent. of retail prices, and 2 kroner a litre in restaurants respectively. Amongst foreign exchange rates the widest fluctuation has been shown by Finn marks, which through the tension in the Aaland question have gone down to 21. The other Scandinavian exchanges, Norway and Denmark, have also moved in favour of Sweden, whereas pounds, francs, and marks have gone the other way, being to-day 18.20, 36.50, and 11.85 respectively.

STOCKHOLM, June 28.

The financial situation continues to be rather depressed, and money is getting scarce. The last State Bank report, in fact, gives the impression of a considerable falling away. News that representatives of the Soviet have acquired the control of the largest locomotive factory in Sweden, the Nydgirst and Holm A.B. at Trollhâtlan, by paying 4,000,000 kr for the shares in the company, and 3,000,000 kr in advance for deliveries of locomotives, caused some alarm in Swedish industrial circles. This agreement is said to cover the supply of over 1,000 engines over a period of six to seven years, and was preceded by an offer from a number of Swedish firms to deliver 300 locomotive engines at an average price of 425,000 kr a piece, which, however, was rejected. It is of interest to hear that the price for the engines now fixed in the agreement with the Soviet is only supposed to be 275,000 kr, which seems to indicate that the purchase sum is only a fictitious one. The principle, if followed by further similar deals of placing Swedish industry under foreign control, may naturally have disastrous effects for the home industry. The holiday season has now begun, and as a consequence business on the Stock Exchange has been dull. The loss in the values of leading industrial, bank, and shipping shares at the end of May last was given as 29.16,000,000 kr, but since then a rise of 79.48,000,000 kr is recorded, so that a total recovery of 50.32,000,000 kr has been made.

Letters to the Editor.

NATIONAL DEBT AND HIGH PRICES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your correspondent, Mr M. de P. Webb, asks whether our £8,000,000,000 National Debt has anything to do with the present high level of prices. May I give several reasons to show that the rise in prices is largely due to its existence? One result of the rapid increase of our debt has been to give an enormous buying power to the Government, which always resulted in increasing the value of everything required to carry on the war. This was the first stage in the rise of prices. With the large increase of the debt we have also the disbursement each year of about £400,000,000 in dividends, thereby giving greater spending power to the holders. In some cases it has only been a change of investment from, say, American securities to War Loans, but the gain to the investor on balance must have been very considerable, apart from the increasing rise in the rate of interest.

It might also, I think, be argued that the eagerness to subscribe to War Loans must have lessened the power of many in the production of commodities for the civil population. If money had not been so urgently required by the Government it would have been used in the production of goods. We have an illustration of this point in the dearth of houses. Of the sums borrowed by the nation large amounts were used in the erection of buildings for war uses, which meant the swallowing up of all available building materials; domestic building being nil all through the war, the result of this we see in the increase in the value of houses.

Then the increase in taxation necessary to meet the interest on the huge debt must be a further reason for the increased cost of everything, there is always a tendency to pass on the extra cost, and in the last resort it has invariably to come out of the pocket of the consumer.—Yours truly, H. BEAUMONT.

The Stock Exchange, London,
June 22nd, 1920.

EXCESS PROFITS DUTY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—There will, I believe, be general agreement—certainly amongst those who have not participated in increased profits—that the large sums of money made during and in consequence of the war are a fit and proper subject for taxation, and as no other acceptable plan for attaining this object has been devised, the excess profits duty holds the field.

Generally speaking, to make taxation retrospective is not desirable, but the men who in the last years of the war bent their backs to the task of providing the army with its requisites, and honestly paid 80 per cent. of their gains into the Exchequer, have a grievance, inasmuch as their competitors who entered the profit zone earlier paid only 50 and 60 per cent. I would therefore suggest that a supplementary assessment should be issued, making the charge on all profits to be 80 per cent. from the commencement of the war.

In 1917 the tax at 50 per cent. brought in 140 millions; at 80 per cent. it would presumably have reached an additional 80 millions. In 1918 the proceeds at 60 per cent. were 220 millions; the extra yield should be 70 millions. In 1919 the amount of 285 millions probably contained a good deal of arrears, and if we calculate that 50 millions would be the additional amount due, this would give the Chancellor of the Exchequer 200 millions to commence the reduction of the floating debt.

There would be cases for special consideration. Where the earlier profits had been used for the extension of plant and buildings, it might be necessary to give time for payment, and where the extended works were not now in use the tax might have to be remitted, but I believe these cases would not be numerous.

The objections to the excess profits duty are obvious. It deters enterprise, and encourages wasteful management, but the new rules should assist in remedying these faults.

It must be borne in mind that the task of funding the floating debt can only be done gradually. Probably the banks and financial houses have given all the assistance they can to the Government; they can only now depend on the quiet, steady people who habitually live within their income to improve the prospects of their children, and any funded loan should be made available for estate duty. It is a great incentive to save if by so doing the necessity of realising existing investments can be avoided.

I would also suggest for the consideration of the revenue authorities the advisability of allowing those persons who have already subscribed the full 500 war certificates to take up another 100, or even to make up the actual cash subscribed to £500.

These certificates have been largely taken up for the benefit of children, and are a very valuable help to the Government. They entail the minimum of book-keeping, and will probably be allowed to rest with the Treasury for many years.—Yours, &c., W. WILKINSON.

73, Lever street, Manchester,
June 29th, 1920.

THE DISTRICTING OF THE AMERICAN RAILROADS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—As I am not a lawyer, Mr. Acworth has an advantage over me. That gentleman, too, has closer relations with America than I enjoy, and so should know. I cannot find anything in the Act to say that consolidations shall be compulsory, so cannot accept Mr Acworth's reading of it that "The Commission is to enforce consolidation if the companies fail to consolidate voluntarily." Yet if I am in the wrong I am in very good company. Senator Cummins, for instance, speaking in the Senate on February 23rd, said:

"In so far as the Senate Bill contemplated compulsory consolidations, the Senate conferees have found it necessary to recede.....With the approval of the (Inter-State Commerce) Commission, guided solely by the public interests, consolidations are to be permitted, but they are to be voluntary, and must be consistent with, and in furtherance of, the plan adopted by the Commission."

More important still was the opinion expressed by Mr Walker D. Hines at the National Press Club as recently as May 11th. The quotation I am about to give is important in that Mr Hines was the Director-General of Railroads at the time Federal control ceased on March 1st. That gentleman said on the subject in question:

"The one leading respect in which I believe the Act falls short of the necessity of the situation is that the Act leaves the several hundred railroad companies of the country still free to operate each on its own account.....I seriously doubt whether substantial results can be accomplished in the absence of further legislative provisions which will either compel consolidations or offer such inducements to consolidations as will ensure their taking place."

The other point mentioned by Mr Acworth, *i.e.*, the number of systems into which the companies are to be consolidated, is a minor matter. The comment made in the article of June 19th related to the definiteness of Sir Eric Geddes' statement that "Provision is made for the reduction of separate companies to approximately 15 to 20." It would have been better had the Minister said, for example, that this was contemplated. As the *Economist*, in the article in question, observed, the construction most people could put upon Sir Eric's remark would be that the consolidation into from 15 to 20 systems was already ordered—a construction arrived at by such a clever man as Mr Balfour-Browne.—I remain, Sir, your obedient servant, THE WRITER OF THE ARTICLE.

THE QUESTION OF CREDIT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I am very glad you have given such prominence to the most excellent letter of Mr T. B. Johnston on the question of credit, in the last issue of your journal.

Mr Johnston is a very able and a well-known business man who has had a very varied experience in both the fields of finance and manufacture, and he may be regarded as an authority on the question of credit.

The Government have been warned for many months past of the dangers involved in the process of what is commonly termed "deflation," but unfortunately the Chancellor of the Exchequer appears to be wholly in the hands of the Treasury officials, whose knowledge of finance is as scant as that of the University professors who have been clamouring for dear money.

The recent announcement that no increase of Treasury notes would be permitted, has already had its effects in curtailing credit and depressing trade and industry. The "deflationists," if they have the slightest interest in the country's welfare, must look with some surprise on the work they have already accomplished in this direction. Orders are being cancelled wholesale, and buyers are reducing their demands to their immediate daily necessities. The present outlook is certainly disturbing in the extreme. Six months ago nearly every firm in the United Kingdom was working at full speed, and many were inundated with orders, and the prospects were very encouraging that we should have an extremely prosperous period for the next few years, but the Government have managed by their foolish financial measures to practically destroy all this, and it is certain that if no change occurs in the way of increasing credit facilities, there will be a vast amount of unemployment throughout the country this coming winter.

Unfortunately, the men who are responsible for this policy of contracting the currency and credit are not those who suffer when the smash comes. On the contrary, with the increase in the value of money, it is these salaried gentlemen who profit by the policy! The sufferers are the wealth producers, and particularly those whose enterprise is responsible for the building up of large industries.

There are two remedies for high prices; the one is the sane policy of increasing the output of commodities, so that the disproportion between purchasing power and goods is levelled up, and the other is the suicidal policy of cutting down the volume of purchasing power. The latter process means not only reducing the demand for commodities directly, but it also means reducing the supply. In other words, deflation involves starvation!

This is surely not the time that a policy of this kind should be put into operation! With the present state of labour unrest, and with the freedom that is now allowed to sedition mongers to agitate openly for revolution, this is surely not the occasion for an experiment of this nature—although it can hardly be called an "experiment" in face of the numerous instances on record where a similar policy has been tried and has always ended in social misery and trade disaster.

The "Banker's Magazine" has recently pointed out what the fall in quotations of certain of our securities has amounted to during the past few weeks—over £60,000,000!—since the Chancellor announced his policy of contraction. Whilst he is seeking on the one hand to raise enormous sums by taxation, on the other hand he is permitting his officials to throttle the sources from which such revenue might have been obtained.

Manufacturers are being asked to increase production and to find employment for the demobilised men, and yet the Government is making it impossible for the banks to supply the credit that is necessary for such output and employment.

It is to be hoped that the professors and theorists who are attempting to apply their mediæval theories to modern

conditions, will be "sat upon" before they have effected the ruin of the country.—Yours faithfully,

ARTHUR KITSON.

British Empire Club, St. James's, S.W.,
June 29, 1920.

[The only "prominence" that we gave to Mr Johnston's letter was space in our correspondence columns, which we accord, when possible, even to letters containing such questionable statements and innuendoes as Mr Kitson's.—ED., ECONOMIST.]

Books and Publications.

THE ROYAL EXCHANGE.

"The Royal Exchange." By A. E. W. Mason. London: Royal Exchange.

As we read Mr Mason's most agreeably written account of the three Royal Exchanges (two of which were burnt), of the Hanseatic merchants in their stillyard by Cannon street railway station, of the South Sea Bubble, and of pre-eighteenth century marine insurance, we seemed to hear the following (imaginary) dialogue. The secretary of the Royal Exchange Assurance Corporation, who has read Mr Mason's manuscript—the draft—murmurs diffidently: "Of course, Mr Mason, I should not dream of criticising the work of so eminent a writer. Your book is charming in every way. But don't you think that you might make some slight reference to the Royal Exchange Assurance Corporation, which is celebrating its bicentenary?" "Dear me," says Mr Mason, "now you mention it I recall that there was some word of a bicentenary. I will see if something can be squeezed into the proofs." Although, as we pointed out last week, Mr G. S. Street's volume on the London Assurance excited without satisfying our curiosity, his book is much superior to Mr Mason's parallel effort. For he did stimulate our imagination to play about those early days of the twin survivors of the South Sea Bubble. But Mr Mason has given us no more than a pleasant magazine article with the three Royal Exchanges as his subject. It may be that the unburnt records of the Royal Exchange are even scantier than those of the London, and that Mr Mason had nothing tangible to work upon. If so he was unfortunate, and so are we. There is no puzzle more intriguing in the history of the City than the incredible survival of these "bubbles" of two hundred years since. And neither Mr Mason nor Mr Street has really helped us to understand how they were preserved from bursting.

BOOKS RECEIVED.

Currencies After the War. A Survey of Conditions in Various Countries. Compiled under the auspices of the International Secretariat of the League of Nations. (London) Harrison and Sons. 7s 6d.

Bulletin of the Imperial Institute. October-December, 1919 (London) John Murray. 2s 6d net.

The above-mentioned number of the "Bulletin of the Imperial Institute" discusses in detail the possibility of utilising the large quantity of seed now being produced on rubber plantations. It was shown many years ago by investigations made at the Imperial Institute that the kernels of Para rubber seeds yield a large amount of oil similar in properties to linseed oil and that this oil can be used for paint-making and other purposes for which linseed oil is employed, whilst the cake which is left after the oil has been removed from the kernels is an excellent feeding-stuff for live stock.

The Socialist Illusion. Being a Critical Review of the Principle of State Socialism. By Reginald Tayler. (London) George Allen and Unwin, Limited. 2s 6d net.

New Zealand Official Year Book. 1919. (Wellington, N.Z.) Census and Statistics Office.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
July 13.	July 14.

The Stock Exchange having been closed on Thursday, July 1st in accordance with the rule in connection with all bank holidays and with to-day a holiday as well, it was to be supposed in advance that business would prove interrupted and patchy. Nevertheless, the tone throughout the general markets showed a fair amount of firmness. Subdued hopefulness looks forward to the next six months as likely to offer more settled conditions than those which have prevailed lately. The publication of the Government's White Paper in connection with the home railway companies aroused a good deal of interest, and provoked no little conflict of opinion. Underwriters of the New South Wales 6½ per cent. Loan were left with 55 per cent. of their obligations, and the price started off at 1¼ discount, subsequently gaining the fraction.

War stock is distinctly harder, and National War Bonds sympathised. Victory Bonds went back a trifle, on selling by the few speculators who had bought in advance of the drawing. Home Railway prior-charge stocks once more declined, due to monetary conditions, the falls having no connection with the Government suggestions in regard to the future of the companies. French Bonds have improved, and Russians were a fluctuating market. On balance, Russian prices moved upwards. Mexican Government bonds, together with prices of other Mexican securities, have been disposed to give way a trifle after their material rises, and further news is now awaited with a touch of anxiety. There is not much doing in South American bonds. Paris sold a little stock in the early part of the week, but turned round a buyer on Wednesday afternoon, and the French example was followed by professional support in various markets intimately connected with inter-bourse shares.

Home Railway stocks were better in advance of the publication of the White Paper, in anticipation of some scheme—and the details were very secretly guarded—which might possibly attract fresh investment money into the market. Upon the official announcement, however, a shade of disappointment developed. The scheme is held to be too vague for it to appeal to the ordinary man, and while it is not expected that stockholders will feel inclined to part with their securities on account of the proposals, the Stock Exchange does not look for any revival of attention to this market on the strength of the White Paper. The various Home Railway groups are accordingly easier. Canadians remain dull. The official announcement that the Treasury intend to hand back a number of American bonds, and with them Canadian Pacific preference stock, to their proprietors on October 1st caused more satisfaction than business. The Mexican Railway market is reactionary, and in Argentines there is too little business passing for it to have any noticeable effect upon quotations. Nitrate shares moved irregularly although the rise in the price of nitrate itself has strengthened the tone of the market as a whole.

Rubber shares went ahead under the influence of a little support in a few of the leaders. In the Oil market, Paris supported Mexican Eagles, and this gave a more cheerful aspect to the list as a whole. The Stock Exchange has been dealing largely in Mexican Eagle coupons, for which 2s 3d more than the banks paid has been offered by those who are shipping the coupons

(directly or indirectly) to the United States. Industrials generally took on a better appearance, on circulation of very unreliable rumours respecting the retirement of Mr Austen Chamberlain from the Chancellorship of the Exchequer, which is held to contain a hint at the Excess Profits Duty being restored to 40 per cent., if not abandoned entirely. The idle rumour did duty, however, in serving to stiffen prices which previously had been dull and heavy. Marconis proved susceptible to the fear of Government competition in connection with a wireless chain, and prices of the shares have given way. The remarkable developments in connection with Baldwins led to the price going back to 40s, instead of the 60s which shareholders were hoping to be paid in cash yesterday. The Armament group is weak, because of possible new issues from Armstrongs and Vickers. Amongst Textiles, Courtaulds have been further depressed, while in the Motor market Dunlops, after touching 6⅞, advanced to 7¼. The Insurance market has leaned to the dull side, and Shipping shares show few changes. Gas stocks are better, on the hope that the threatened strike may be averted.

The Kaffir Circus enjoyed a mild rally, partly on the French support already mentioned, partly on news of a satisfactory strike on the Randfontein Central property. Business, however, has been limited to semi-professional circles. De Beers and Jagers moved entirely in sympathy with the financial feeling prevailing at the moment in Paris. Rhodesians have been disposed to ease off. Russian mining shares made a tentative move forward, but the public decline to back up the movement. The various Tin groups are stagnant, and the improvements which occurred last week in Mexican mining shares became partially lost in sympathy with the reactions in other issues connected with Mexico. The Broken Hill market waits for strike news from the other side. Burmah Corporations were the subject of buying orders, which rushed up the price at one time to £10, and amongst West Australians, the Hampton shares hardened on a little support based upon the latest discoveries on the properties.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital. £	Cash Subscription. £	First Payment. £	Further Liability. £
ISSUES OF THE WEEK—				
Amount previously recorded.....	.. ..	227,131,824 ..	.. ..	.. ..

5-15 Year Treasury Bonds, repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. These are still on offer. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

London Housing Bonds.—Registered bonds for £5 each or multiples thereof are obtainable for terms of 5, 10, or 15 years, at applicant's choice. Six per cent. interest and full repayment when due guaranteed by the London County Council on the security of London's rates. Interest payable each September 30th and March 31st. The money will be applied solely for the purpose of housing schemes approved by the Government, and in particular to finance the housing schemes of the Metropolitan Borough Councils. We referred to these bonds in a leader in the *Economist* on June 12th, page 1282.

Low Temperature Carbonisation, Limited.—Authorised capital £1,200,000, divided into 600,000 7 per cent. participating preference shares of £1 each, of which £570,921 has been issued, and 600,000 ordinary shares of £1 each, of which £226,910 has been issued. There is also an authorised 6 per cent. first mortgage debenture stock for £150,000, of which £145,027 has been issued. The profits available for distribution in any year are divisible as follows:—The holders of the participating preference shares are first entitled to a non-cumulative preferential dividend of 7 per cent. After the holders of the ordinary shares have received a like dividend, the holders of the participating preference shares are entitled to participate *pari passu* with the holders of the ordinary shares until the aggregate amount of the fixed and further dividends so paid to them is equivalent to 30 per cent. of the profits of the company so available, the remaining profits being divisible amongst the holders of the ordinary shares. This is an issue at par of 250,000 ordinary shares of £1 each. The prospectus states that: "The principal object of Low Temperature Carbonisation, Limited, is the erection and operation of works for the carbonisation or conversion of raw coal by the special process of the company into valuable and urgently-needed commodities as follows:—Motor spirit, fuel oil, smokeless fuel, sulphate of ammonia, and gas. This method of treating coal is the outcome of extensive research over many years, and the successful development of the processes and special plant of the company (which are patented both in the United Kingdom and abroad) may now, in the opinion of the directors, be regarded as assured." During the last two preceding years 570,921 participating preference shares of £1 each and £91,277 6 per cent. first mortgage debenture stock have been issued credited as fully paid. The shares and debenture stock so issued as fully paid, represented as to 191,875 preference shares, the consideration for the undertaking of Coalite, Limited, and as to 378,599 preference shares and £91,277 debenture stock, the consideration for the undertaking of British Coalite Company, Limited. The remaining £53,750 debenture stock has been issued to secure debts owing by the company. In addition, 131,294 ordinary shares have during the same period been subscribed for by shareholders in cash. The number of ordinary shares offered on each previous allotment during that period was 4,384, 190,158, and 200,000, and the number of shares actually allotted on each occasion was—4,384, 100,000, and 26,910. The total sum paid up on these 131,294 shares is £89,397. The amount paid within the two preceding years by way of commission for subscribing or procuring subscriptions for shares is £19,036. No information is offered as to the past profits or surplus assets of either of the two above-mentioned companies. If manufacturing costs can be kept under sufficiently the company has a ready market for its productions. The information given in the prospectus is, however, insufficient for us to be able to frame an opinion as to the future prospects of the undertaking.

Hargreaves Bros. and Co., Limited.—Authorised capital £1,000,000, of which £322,000 has been issued and paid up. This is an issue at par of 200,000 8 per cent. cumulative preference shares of £1 each. It is part of an authorised issue of £500,000, and £122,000 has already been issued. The company was incorporated in 1906 to acquire the business (makers of blue and black lead) of the same name. Since 1906 some 20 other business have been bought outright. Profits are given from 1915. Excess of assets over liabilities are stated as £325,745, and this sum includes no amount for "goodwill." As the shares of this issue will have first claim amongst shareholders on the assets the issue may be said to be moderately well-secured. Voting powers of preference shareholders are limited. The offer is a fairly reasonable one of its class. The prospectus sets out the various activities of the undertaking, and with the exception that pre-war profits are omitted investors are given a comparatively informative statement of affairs.

Francis Shaw and Co., Limited. — Authorised capital £220,000, divided into 100,000 7½ per cent. cumulative participating preference shares of £1 each and 120,000 ordinary shares of £1 each, of which 62,000 preference and 88,212 ordinary shares have been issued. This is an issue of a further 60,000 of the above-mentioned preference shares at par. The preference shares are entitled to a fixed cumulative preferential dividend of 7½ per cent. per annum, and the right, after payment of a dividend of 7½ per cent. upon the ordinary shares, to receive a further dividend of ½ per cent. for every additional 1 per cent. dividend paid upon the ordinary shares, but so that the aggregate dividend on the preference shares shall not in any year exceed 10 per cent. These preference shares have priority over the ordinary shares in a winding up as regards repayment of capital, but do not confer any further right of participating in assets. The company's business, which was founded by the late Mr Francis Shaw in 1879, was incorporated into a limited company in 1908. It produces machinery for use on rubber

estates and machinery for the manufacture of motor tyres and all other classes of rubber goods. Net assets are valued at £225,666, but freehold land, buildings, machinery, &c., were revalued on May 11, 1920. Undivided profits have been capitalised to an amount of £73,150. It is stated that the directors and friends have agreed to apply for 25,000 shares of this issue. Preference shareholders have limited powers of voting. No part of the issue has been underwritten. This is an undertaking which is capitalised in accordance with trade boom conditions, but, on the other hand, it is stated that as a result of its favourable pre-war standard of profits of £16,380 the company has not been called upon to pay excess profits duty. It is remarkable perhaps that a company which has such an extraordinary favourable pre-war record should content itself with showing a table of profits from 1915. The issue is well secured, and the company should be able to pay at any rate minimum dividends without much difficulty.

A. Boake, Roberts and Co., Limited.—Authorised capital £300,000, divided into 20,000 ordinary shares of £10 each and 10,000 5 per cent. cumulative preference shares of £10 each, of which the whole has been issued and fully-paid up. An issue of 6 per cent. debentures has been authorised for £100,000, of which £50,000 has already been issued, and £50,000 is now offered for public subscription at £92 per £100. The principal will be redeemed at par by annual drawings, and it is stated "that the whole issue should be discharged by June 30, 1945, at latest." Debentures now offered will participate in the 1922 and subsequent drawings. No part of the issue has been underwritten. The company was registered in 1897 to take over the business of manufacturing chemists of the same name. Profits are given from 1912, and these show that the company has been progressively successful during this period. The prospectus states that "the value of the assets appearing in the last audited balance-sheet, dated March 31, 1920, exclusive of registered trade marks, patents, and goodwill, was £422,648." It would have been better, however, from the investor's standpoint if the prospectus had given the balance-sheet in full. The investor must ask himself (1) are these gross assets or net assets? (2) If gross assets, what is the amount of trade and other liabilities? (3) Of this £422,648 of assets how much represents floating assets, and how much freehold land, buildings, plant, machinery, &c.? As these points are not made clear in the prospectus, it is impossible to advise investors to subscribe to what may possibly be a good issue.

Cattle Trade Bank.—Authorised capital £100,000, divided into shares of £1 each. The prospectus states that "It is not intended to call up more than 10s at present on the shares," and that "the directors and their friends have already promised to apply for 20,000 shares." This is an issue of 97,000 shares at par. The company has been formed "to start a bank at Birkenhead to serve the requirements of the Irish Cattle and Meat Traders." With this object in view it is proposed "to acquire the goodwill of the business of an Exchange carried on" by Mr Charles Hodgson Reed, at 16 The Lairage, Birkenhead, under the title of E. Reed and Sons. The total purchase-price of this business is £10,000, of which £150 is for fixtures and fittings, and £9,850 represents "goodwill." The purchase-price is to be satisfied by the payment of £7,000 in cash and £3,000 in shares. Some interesting figures are given as to the landing of Irish cattle and sheep at Birkenhead, but concerning the past financial history of Messrs E. Reed and Sons the prospectus is strangely reticent. Past profits (if any) are not mentioned, and though we note that the management and staff of the business will be retained, it is somewhat unusual to ask shareholders to pay nearly £10,000 for goodwill on such scanty information. The bankers to the "Cattle Trade Bank, Limited," given on the prospectus are the London Joint City and Midland Bank, Limited, 52 Hamilton street, Birkenhead. As far as can be gathered from the memorandum of association the articles provide for undertaking all the usual banking business. Article 23 gives the bank power "to borrow, or raise, or secure the payment of money in such manner as the company shall think fit, and in particular by the issue of bonds, debentures, debenture stock (perpetual or otherwise) . . ." It may be that the company will succeed, but it has to face the keen competition of the big banks, and in addition to this it has to overcome the usual prejudices with which most new banking undertakings (especially small ones) encounter in this country. When these points and the 10s per share liability are taken into consideration, the ordinary investor will look elsewhere for an investment, unless he has personal knowledge, either of the old business or of the directors of the present bank, and has information which is denied us in the prospectus.

COMPANY MEETINGS, &c.

MARCONI'S WIRELESS TELEGRAPH COMPANY, LIMITED.

HIGHLY SATISFACTORY RESULTS.

MR GODFREY ISAACS' CRITICISMS OF THE COMMITTEE'S REPORT.

The ordinary general meeting of Marconi's Wireless Telegraph Company, Limited, was held, on the 29th ultimo, at the Connaught Rooms, Kingsway, London, Senatore G. Marconi, G.C.V.O., LL.D., D.Sc., chairman of the company, presiding.

The Chairman, in the course of his speech, said: Turning to the profit and loss account, the balance of contracts, sales, traffic and trading accounts amounts to £946,997 6s 4d, which is approximately £180,000 over and above the preceding year's figures. There is, of course, added to this the sum of £590,000 which was received as damages for breach of contract. There remains a balance to be carried forward to balance-sheet of £1,220,739. This sum, added to the balance brought forward from the previous year, results in the very substantial sum of £1,684,526. We are paying 15 per cent. on the ordinary shares. I have no doubt the figures will be regarded by you as highly satisfactory and indicative of the continuous extension of our business. It is not expedient for me to speak in much detail of the many interests which we hold abroad and the negotiations which are pending. You will perhaps be satisfied if I tell you that progress is being made each year, our interests enlarged, and our organisation extended. You will have learned from the report that there having been no settlement with any of the Government Departments in respect of any of the company's claims arising out of the war or for services rendered during the war, no sum in respect of any of these claims, therefore, figures in the year's accounts. The arbitration to which we referred at our meeting last year which has been agreed with the Admiralty in respect of the Lodge Patent has just been concluded, but Lord Moulton, who has acted as arbitrator, has not yet delivered his judgment. We may, however, confidently expect to have this very shortly, and we think there should then be no reason for any further delay in coming to an amicable settlement of our claims against the Admiralty, the War Office, and the Air Ministry. With regard to the services rendered in respect of which we have a claim pending against the Post Office, we are still hoping that this also may be settled ere long in an amicable way. In this hope we have stayed our proceedings under the Petition of Right.

THE IMPERIAL CHAIN OF WIRELESS STATIONS.

As you are aware, no decision has been taken in respect of the Imperial chain of wireless stations. In November last, however, the Secretary of State for the Colonies, as chairman of the Imperial Communications Committee, appointed a committee to prepare a complete scheme of Imperial wireless science and Imperial needs. As we object to Sir Henry Norman being on the committee, we have refused to give evidence before it. We have put forward a scheme under which we are prepared to erect for our own account, and at our own cost, a very complete chain of wireless stations throughout the whole Empire, which will not cost the country a single penny. Not only that, but we have offered that 25 per cent. of the profits derived from the service, after making proper provision for interest on capital and amortisation, shall belong to the State. In the hands of private enterprise this 25 per cent. should represent a very considerable sum indeed.

TECHNICAL PROGRESS.

With reference to technical progress, I can say that very considerable advances have been made by Captain H. J. Round in the practical application of what are termed Ionic valves, especially in regard to long-distance transmission, and also in the efficiency of the general arrangements employed at our high-power stations. Many new patents which I consider of value have been taken out or applied for, and a new device with which I first carried out tests on ships of the Italian Navy has been considerably developed by Mr C. S. Franklin. By means of this arrangement the electric waves are propagated in a beam in any desired direction only, instead of being allowed to spread out in all directions. The advantages of this system are obvious, as it absolutely prevents stations outside of a certain angle being able to receive messages or signals which are not intended for them, besides greatly reducing mutual interference. In addition, it is likely to be of inestimable value to ships and shipping as an aid to navigation during fogs and in minimising all risk of collision. In order to thoroughly test this and other similar devices under the actual conditions prevailing at sea, I have lately equipped an ocean-going yacht with all the necessary apparatus, and during a recent voyage to the Mediterranean the great value of direction-finding appliances was most clearly demonstrated. Great progress has also been made, not only in wireless telegraphy, but in wireless telephony, which must soon be turned to very considerable commercial account, in respect of our recently acquired knowledge to telephones with wires. Practical application of these new principles has already been made in America and in Germany. Before concluding, I wish to express the appreciation, not only of myself but of the board of directors, to Mr Godfrey Isaacs, whose hard and untiring work and whose zeal for the interests of the Marconi Companies, which he has so ably managed for a number of years, have been unsurpassable.

MR GODFREY ISAACS ON THE COMMITTEE'S REPORT.

Mr Godfrey C. Isaacs (deputy-chairman and managing director), who was received with cheers, said: Ladies and gentlemen, before seconding this motion, I would like in the first instance to thank our chairman for the words which he has used so complimentary to me, and you also for the way in which you have received his observations. I had not, ladies and gentlemen, contemplated saying very much to you to-day, as I think the ground has been very well covered by our illustrious chairman. The publication, however, of extracts from the committee's report seems to necessitate my saying something to you on that subject. Senatore G. Marconi has told you that we have only so far seen extracts from that report as they have appeared in the morning papers. Just as I was coming to the meeting I had a copy of the committee's report placed in my hands. It is, as you see, a very long report, and I have not even had time to read it all through yet, but I have seen some few things in it which are interesting, and about which, perhaps, I may even at this short notice say something to you which, I hope, will be of some interest, and perhaps a little consolation to you. I am sure you must feel that you want that consolation after reading this morning's papers. Well, now, first of all, I want to remind you that this committee is composed of a number of gentlemen, all of whom are purely technical gentlemen except the chairman, Sir Henry Norman, and one other member, who is an assistant secretary of the Post Office.

CRITICISM OF MR BROWN'S FIGURES.

The report, in my view, apart from the technical information which it gives—which is very interesting and which is highly satisfactory to the Marconi Company—is one which is obviously guided by the very clever hands of an experienced chairman of Parliamentary Committees, and I do not think we want a very great stretch of imagination to know how easy it would be to obtain the unanimous support of a number of technical gentlemen to the views so cleverly put forward in this report, and which would appear to technical gentlemen to be so natural, particularly when you bear in mind that all the substance which this report contains, and upon which, I might say, it is based, so far as the commercial side of the question is concerned, is based upon figures and information which were supplied by the assistant secretary of the Post Office.

The assistant secretary of the Post Office in this case was Mr F. J. Brown, and I think you will agree with me that the evidence and the immense information which Mr Brown put before the court in July, 1919, necessarily committed him to the evidence and information which he would give to this committee. There were reams of paper containing figures which were put forward to endeavour to belittle the Marconi claim which was before Mr Justice Lawrence last year, and these figures showed, according to Mr Brown, that the possible services which the Imperial stations, had they been constructed, would have resulted in such a small number of words transmitted and received, and such a small gross receipt that the total value of the whole contract, had it been carried out, would not have exceeded £47,500. (Laughter.) Well, that was a matter which, as you know, was then very fully threshed out in court, and the judge did not accept Mr Brown's views; in fact, instead of estimating the value of the contract at £47,500, he, if I remember rightly, put it approximately at £1,200,000, which, reduced to present-day value, brought it down to some £590,000.

POULSEN ARCS AND THERMIONIC VALVES.

I mention those figures only to indicate upon what sort of material this report is based. The report deals with very much the same figures as were placed before the Court, and I am inclined to think that when the matter is considered a little later by Parliament that the figures which will be looked into will be, perhaps,

very different from the figures which have formed the basis of this report, and which were put before the Court in 1919. The technical side of the report is very interesting. I cannot find the reference in the report which I have received, but I will quote from a morning newspaper :—"The three chief factors of a satisfactory commercial service are reliability, speed, and cheapness. For this reason the system of the thermionic valve, which has revolutionised wireless practice in the last five years, is recommended." Well, ladies and gentlemen, if any of you followed what took place a year ago, you will remember that the Post Office declared in Court before Mr Justice Lawrence that the Poulsen arcs, which they were then erecting, were a most efficient and up-to-date service, and that they would do all that was required, and they rqeuired no patent No Marconi patents were required for the purpose. Our evidence was to the effect that the Poulsen arcs belong to the Marconi Company, but that they were obsolete, that wireless telegraphy had made great strides, and that the thermionic or ionic valves had superseded the Poulsen arc.

THE QUESTION OF STATE OWNERSHIP.

Ladies and gentlemen, I think that was ridiculed by the Post Office a year ago. It is therefore some satisfaction to know to-day that the committee of experts who have inquired into this matter declared that great strides had been made during the past years by reason of this thermionic valve. I agree that great strides had been made, and I think that greater strides are being made daily. I have seen from this report sufficient to know that they had very little information of an up-to-date character before them, and it is perfectly natural that they should have very little up-to-date information, for the only people who had that knowledge are ourselves. There is one thing more I want to say upon that point. It it recommended here, quite cleverly, outside the terms of reference, but just what one would have expected, that these stations should be State-owned. It is true that it is put a little bit cautiously. On page 16 they say, "The question of State ownership versus private ownership of Imperial wireless communication not coming within the terms of our reference, we are restricted in our examination." I agree. It did not come within the terms of their reference, but although notwithstanding the fact that it does not come within the terms of their reference, they made quite a strong point of placing before the Government the great advantages that would accrue if they were State-owned and controlled by the Post Office.

At all events, we do know this—that Mr Brown, on behalf of the Post Office, in 1919, told the Court that the service which the Imperial chain of wireless stations would provide would necessarily be limited, even though his calculations were wrong and ours were right, because he said, "If we found that the Imperial chain of stations did more than what we say, then we should have to raise the prices of wireless telegrams in order to protect the cable companies." That is the sort of thing we have in front of us, if we are going to have an Imperial chain of stations controlled and worked by the State or by the Post Office. I do not believe we are. I am very confident that we are not, notwithstanding this very able report.

THE THERMIONIC VALVE PATENTS.

Let me assume for a moment, however, that I am wrong, and that the stations are going to be built by the State and they are going to be worked and owned by the State. What is our position? They must have the thermionic valve; the technical committee say so. Right! Beside a good many other things; but they must have that. The thermionic valve is controlled by a number of very important master patents. Some of them—most of them—are taken out by gentlemen in the Marconi Company. Some of them—some very important ones—are taken out by very able people in America; and there are others equally important which belonged to the Germans. All of us in Germany, in America, and here have devoted ourselves very much to this great development in wireless telegraphy, and it is only natural that each should have discovered something that is of value in connection with this thermionic valve. Well, ladies and gentlemen, the thermionic valve is covered by master patents taken out in America, Germany, and England. I do not care which form of thermionic valve is used. I do not care whether it is American, whether it is German, or whether it is English, because every one of these patents—every one of these master patents—is the property for the whole of the British Empire of the Marconi Wireless Telegraph Company. That being so, ladies and gentlemen, whether in this report and in the estimate of costs, does the committee deal with the 10 per cent. of the gross receipts to which the Marconi Company would be entitled, and how do they show that they are going to avoid paying to our company 10 per cent. of the gross receipts, if they carry out their own recommendations? If we do not build these stations we shall be entitled to a very substantial royalty, and I do not see how that royalty can be anything different from what the Government itself found fair a few years ago.

What was fair and proper then, I think they would be obliged to pay us in future, assuming that they have recourse to the recommendations of this committee. I fear nothing at all from this report, and when I have had more time to study it, and have had the assistance which I shall receive from others in connection with the report, I hope that we shall be able to dispose of many of the things which appear as they do as extracts in the morning papers, and which must be very alarming to many of you, but I assure you are not alarming to us. I think I have said all I need say upon this subject. At the moment you may be perfectly certain that we shall not sit still. I will now conclude by seconding the resolution which has been submitted to you, and I and the chairman will reserve to ourselves the possibility of answering any questions which touch upon the commercial side of the company which you may wish to put.

After remarks by shareholders of a complimentary character, especially with reference to Mr Godfrey Isaacs, the report was unanimously adopted and the formal business transacted.

ANGLO-ARGENTINE TRAMWAYS.

IMPROVED POSITION.

NEW TARIFF.

The thirty-sixth ordinary general meeting of the Anglo-Argentine Tramways Company, Limited, was held, on the 29th ultimo, at Winchester House, Old Broad Street, London, Sir George Touche, Bart. (chairman of the company), presiding.

The London manager and secretary (Mr W. D. Dawes) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said, I am glad to say that, while our dividends are still heavily in arrear, our position is not nearly so deplorable as it was a year ago, and there is every promise that a reasonable prosperity, without which we cannot hope to give the best service to the city, awaits us in the early future.

THE YEAR'S OPERATIONS.

Let me now invite your attention to the figures in the accounts. The redeeming feature of the year's operations was the continued and steady increase in the traffic receipts, notwithstanding an estimated loss of about £80,000, due to the labour troubles. This indicates a great revival of business activity in Buenos Ayres. The number of passengers reached the record total of 370,734,985, an increase of 6.14 per cent., although the car mileage was greater by only 1 per cent. The magnitude of the company's system will be better understood when I mention that it now consists of 395½ miles of single track. This compares with a route mileage of 348 in the London metropolitan area. There are 387 miles of surface lines constructed on the overhead system. The remaining 8½ miles of single track are underground. Our subway cars pass through four miles of underground route, coming to the surface at Caballito, where they continue the journey three miles to Velez Sarsfield. Last year we carried 937,383 passengers per mile of route. The average fare paid was 2.01d per passenger, seven passengers being carried per mile run. The seating capacity of the cars is 32 and trailers are employed.

WORKING EXPENSES.

The unpleasant feature of the year's operations is revealed when we turn to the operating expenses. Owing to the incrasing costs of all stores and materials, and the heavier wages bill, these continued to rise, and reached the high level of 78 per cent. of the gross receipts. The total expenditure for the year amounted to £2,573,742, being an increase of £198,178, or 8.35 per cent., over the working costs in 1918. Traffic expenses, in which the chief item is wages and salaries, were £825,974, an advance of £103,600. This advance is mainly represented by increased wages, £58,000, and strike expenses, £35,737.

Under the head of traction, £832,186, chiefly cost of electric current, there is a small decrease of £24,934. It is, nevertheless, an encouraging sign. It shows that the tide of ruinous prices is on the turn, although we can never hope that it will go back to the pre-war level. Our previous reports have shown that the price of fuel has been destructive of any hope of profitable working for several years.

In the year 1918, for example, when coal delivered at Buenos Ayres was little short of £10 per ton, our electric energy cost us £531,215 over the normal pre-war days, when the price of coal was 30s per ton. We have still an immense amount of leeway to make up, and the present fuel situation is none too bright. Under the head of maintenance £276,882 has been expended, principally on rolling stock, against £243,408 in 1918, although every economy compatible with efficient working has been exercised.

ROLLING STOCK.

There are now in service 1,684 motors and 869 trailer cars. In view of the delays and difficulties in obtaining deliveries of new

rolling stock from Europe, the manager is now constructing cars in our own workshops from native woods. During the first six months of 1920, however, we have been able to ship 26 subway cars, and these are being put into service immediately on arrival. General rates and taxes, at £312,316, show an increase of £25,551. This is accounted for by the greater amount of taxes paid to the municipality corresponding with the increased receipts.

The administration and general charges in Buenos Ayres and London have increased owing to the higher wages paid and the greatly increased cost of stationery, printing, &c. The amount set aside from revenue to the renewals reserve is £97,000. This sum has been agreed by our auditors as a fair provision. The balance-sheet shows that on balance the renewals reserve has been added to by £54,670. I shall be disappointed if the results of the current year do not enable us to augment considerably the transfer to this fund. You will observe that the new capital expenditure during the year was £139,832.

PROFIT AND LOSS ACCOUNT.

The net profit for the year was £92,467, and is arrived at after providing £97,000 transferred to renewals reserve, the annuity of £70,660 to the City of Buenos Ayres Tramways Company, and interest amounting to £539,239 on the three series of debenture stocks at 4 per cent., 4½ per cent., and 5 per cent. respectively. Other amounts charged, before arriving at the net profit, are: For the redemption of debenture stock, £48,581; for redemption of preference and ordinary share capital, £7,014. The amount set aside for redemption of debenture stocks is applied in the purchase of stock in the market. The total stock redeemed and cancelled in this way is £426,450 to date. The sinking fund for the redemption of the share capital is £84,620. To the year's profit of £92,467 there is to be added an undistributed balance of £83,042 from previous years, making a total of £175,509.

DIVIDENDS.

The holders of the first preference shares have not received any dividend since June 30, 1917, the arrears to December 31st last being £440,000 gross. The directors now recommend the payment of a dividend on these shares, less income tax, in satisfaction of the arrears for 12 months to June 30, 1918, absorbing £123,200. Although the amount brought into revenue from 1918 will be reduced by this payment from £83,042 to £52,309, the directors were of opinion it would be your wish that the payment of arrears should be dealt with as promptly as prudence would allow. On the second preference shares no dividend has been paid since December 31, 1915. There are thus four years of arrears, amounting to £550,000. It would be unwise to forecast any date when the payment of these arrears is likely to be commenced, but, if labour conditions remain tranquil, the further demands on the sorely-tried patience of the shareholders may not be excessive. The unfortunate ordinary shareholders have had no return on their invested capital for six years. When it is remembered that in the year 1913 a dividend of 6¾ per cent. was paid on £3,250,000 ordinary share capital, while the average of the two previous years was 8 per cent., you will realise how far we have fallen from pre-war prosperity, and how irresistible was the company's claim to a revision of tariffs. That revision has now been authorised and should have a favourable effect on future revenues.

INCREASE IN FARES.

At our general meeting last July you were informed of our application to the municipality. The situation made increased fares vital in the public interest as much as ours. You know too well how the former state of things impoverished the company.

The Government recognised the justice of the plea that new burdens should be accompanied by new tariffs. The general principle was accepted, but, both for their satisfaction and that of the public, the measure of the need had to be demonstrated.

We put all our cards on the table. Their investigations demonstrated the need for the increase. It was promulgated last January after a stubborn resistance.

The essential provision is that a tariff of 12 cents is to be applicable everywhere—on the surface lines and in the subways—where previously we charged 10 cents. Even with this increase tramway travel is still one of the cheapest commodities in Buenos Ayres. There are certain stipulations as to the payment of minimum daily wages, a maximum working day of eight hours, an increase on present salaries and contributions towards pension funds. These increases in pay are only just, and fulfilled the expressed desires and intentions of the board.

The new tariff is now working smoothly, and the effect on the receipts is already noticeable. We are trusting to the increase in fares to enable us to meet the heavy additional burdens which we now have to bear, but we look chiefly to the growth of traffic for an improvement in the margin of profit.

We grudge no effort to make your tramway system thoroughly useful to the public and a means of good employment to our men. I hope our experience in the years to come will strengthen the good relations which have made such investments possible. Britain and the Argentine are linked by very old economic bonds. In the early days of the Republic Britain gave the lead in providing funds to supply its needs, and has done more than any other country in the world to provide the capital for the development of its great resources. The President of the Republic stated, in most friendly and unqualified terms, that he welcomed British capital in the Argentine, and would afford it the greatest possible protection. If that spirit governs our relations in the future, as it has in the past (and I see no reason why it should not do so), we need have no fear that the vast sums of British capital invested in Argentine enterprises will not receive a continuation of fair and sympathetic treatment.

The resolution was seconded by Mr W. F. Hamilton, K.C., and carried unanimously.

The retiring directors and auditors were re-elected, and the proceedings terminated with a vote of thanks to the chairman.

ANTOFAGASTA (CHILI) AND BOLIVIA RAILWAY COMPANY, LIMITED.

BETTER PROSPECTS FOR NEXT YEAR.

The thirty-second ordinary general meeting of the Antofagasta (Chili) and Bolivia Railway Company, Limited, was held on June 29 at Winchester House, Old Broad street, E.C., the Hon. Charles N. Lawrence (chairman of the company) presiding.

The managing director and secretary (Mr A. W. Bolden) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the opinion as to the results of the year expressed by him at the last meeting had been borne out. It was not until October last that there had been any real revival in the nitrate traffic, and for nine months out of the twelve they had been contending not only with poor traffics but with higher costs of material and with the very insistent demand of labour. The year culminated in the lowest net profits since 1907. Everything had been done to economise in working, but, despite all efforts, it had been a very poor year. The gross receipts from the combined undertaking of railway and waterworks were £1,346,592, a decrease of £1,023,608, or just over 43 per cent. To have reduced working expenses from £1,482,287 to £881,715 was a very creditable performance, having regard to the conditions under which a large railway was worked. Having given details of the traffic receipts and the working expenses, the Chairman summarised the year's results by remarking that they were left with a balance of £858,221, including the amount brought forward from 1918. After meeting debenture interest, the dividends on the cumulative preference and preferred ordinary stocks and a 2½ per cent. dividend on the deferred ordinary stock, the board were able to recommend a final dividend of 6½ per cent. on the deferred ordinary stock, making 9 per cent. for the year. He thought they would agree that that was all that could reasonably be done. Dealing with matters of general importance to the company, the Chairman said that in June last they had been granted an increase of 15 per cent. on all rates except second-class passengers, where the increase was 5 per cent. Those new tariffs came into force on September 10th last, except in the case of nitrate and second-class passenger tariffs, which ruled only from January 1st.

The increase in tariffs granted last year was to compensate for increased expenditure generally, and had no reference to the cost of the strike which came towards the end of the year, and another application had been made for a further increase to meet the extra wages bill. That they had not been charging their customers unduly high tariffs was evidenced by the fact that they had not been called on to pay excess profits duty. Referring to the acquisition of a controlling interest in Chilian Northern Longitudinal Railway, the Chairman expressed the opinion that traffics would develop considerably in time, as there was a new nitrate district which that railway was tapping. They had laid a third rail outside their existing 2 feet 6 inches lines between Antofagasta and Baquedano, in order to have through metre-gauge connection. As to the current year, they had an increase of gross receipts compared with last year of £558,515, and of £62,280 compared with 1918. He was afraid, however, that the rate of working expenses would not be much reduced. Still, he would be extremely disappointed if, when they met this time next year, there was not a very much better showing to put before the meeting. In conclusion, the Chairman dealt with the problem of through railway connection between the North-West Province of the Argentine and the northern part of Chili.

Sir Robert Harvey seconded the motion, and it was carried unanimously.

A resolution increasing the directors' fees from £4,500 to £7,000 per annum was unanimously agreed to, and the resolutions at the extraordinary meeting of the 8th ult. were unanimously confirmed.

CROSSLEY MOTORS, LIMITED.

INCREASE OF CAPITAL SANCTIONED—THE A. V. ROE CO. DEAL.

An extraordinary general meeting of Crossley Motors, Limited, was held on June 28, at the Memorial Hall, Albert square, Manchester, for the purpose of obtaining the sanction of the shareholders to increase the capital of the company and to alter the articles of association. Sir Kenneth Crossley, Bart., chairman of the company, presided.

The secretary (Mr H. E. Shuttleworth) having read the notice convening the meeting,

The Chairman said: Ladies and gentlemen,—Although the notice convening this meeting and the circular letter in reference to it explain in more or less legal language the resolutions which your directors submit for your approval, and which if you agree we will take as read, you will no doubt wish me to emphasise the particular reasons why we consider it necessary to make a further increase in the capital of the company and to alter the articles of association.

Regarding the first point, your company was originally formed in 1910 as an offshoot from Crossley Brothers, Limited, with a nominal capital of only £140,000, increased in 1917 to £300,000, and again in 1919 to £600,000, and we now want you to agree to raise the nominal capital to £1,250,000. Against this increase of capital the turnover has risen regularly from £101,201 in 1912 to £2,489,700 in 1919, and, as a further comparison, the actual value of the works, machinery, stock, book debts, and other assets, less current liabilities, shows a proportionate increase.

NEED FOR LARGE STOCKS.

You will realise that to carry on big manufacturing business nowadays, with all the difficulties in obtaining raw materials, railway transport, fuel, and so on, it is absolutely essential to keep large stocks, so as to ensure continuity of production; and perhaps the greatest difficulty we have encountered has been to provide a number of motor-car bodies sufficient to meet our production in chassis. Up till now we have always depended on outside sources for our body work, but I regret to say that many of our contractors have dismally failed in these promised deliveries.

A few months ago it became evident that the only safe course was to provide facilities for the manufacture of our own body work, and, mainly with this object in view, we acquired a controlling interest in A. V. Roe and Co., Limited, who have excellent factories both in Manchester and at Hamble, near Southampton. Their Manchester works could hardly be better suited for our purpose, but naturally they will require a considerable working capital in order to produce the best results.

COMMERCIAL AVIATION.

I should like to make it clear in this connection that we are most anxious not to hamper in any way the future development of aeroplane manufacture in this country. Commercial aviation is certain to come on a large scale sooner or later, and no one in Great Britain did more valuable work as a pioneer, both before and during the war, than Mr A. V. Roe. His was actually the first machine to fly in England, and ever since those early days his firm has been in the front rank both in the design and manufacture of the safest and most reliable types. All we say at the moment is that we cannot afford to run the aeroplane business as a philanthropic institution. There are special difficulties, owing to the enclosed nature of our small islands, which put us on a footing very different as compared with America and France, and which necessitate a far more efficient organisation in the way of landing grounds and other facilities for safe transit in bad weather. But for these very reasons it would seem essential to the ordinary lay mind that we should obtain every possible help and encouragement from the Government. Surely in future our superiority in the air will be just as essential a safeguard as our supremacy at sea.

In the meantime, until the Government has made up its mind as to how it is going to act, the provision of a large quantity of what we hope and expect will be profitable work for the Roe Company will enable it to retain the best of its labour and to improve still further its staff and organisation.

CAPITALISATION OF RESERVES.

Then, again, at our last meeting of Crossley Motors, many of the shareholders seemed to feel that they ought to receive some direct benefit from the profit on capital account which your company made out of the sale of the magnificent works at Heaton Chapel to Willys Overland Crossley, Limited, and on further consideration your directors came to the conclusion that it was only reasonable that this should be arranged. This Overland Company, by the way, in which we hold a large portion of the deferred ordinary shares, has made an excellent start, and is already turning out from 26 to 30 cars per day, which means one complete car in every 16 or 17 minutes during working hours.

In order to carry out these objects it is proposed, first of all, to amend the articles of association in the manner indicated, so that the desired consequences may have legal sanction; and, secondly, out of the increase of capital, when agreed upon—

(1) To allot 25,000 ordinary shares in Crossley Motors, Limited, to those shareholders in A. V. Roe and Co., Limited, who have agreed to accept them.

(2) To issue at par to our own shareholders, with rights of renunciation attached, one new ordinary share for every two shares now held, which will mean 312,500 new shares, and incidentally provide us with £312,500 further cash capital.

(3) After the above allotments to issue to all the company's shareholders one new ordinary share, fully paid, for every five shares then held, which will absorb a further 187,500 shares, by capitalising part of the company's reserve.

I want to make it very clear that both the present shareholders and those who subscribe for the new shares will obtain, free of cost, one new fully paid ordinary share for every five held.

After these transactions have been completed there will remain an additional 125,000 ordinary shares unissued. There is no need to enter into any details regarding the actual alterations in the articles, as it is merely a matter of bringing them up to date to correspond with the present intricacies of company law.

The one point concerning which I feel some diffidence is the suggested increase in directors' fees, but as the old articles only provided £200 a year, free of income-tax, to each director, including the chairman, and as the present responsibilities are certainly ten times as great as when the company was first formed, you will probably not think the proposed new scale an unreasonable one.

PROSPECTS.

Reviewing the whole position, I expect the question you most desire to ask is whether we shall be able to do as well for you on the increased capital as we did before, and my answer to this would be that not only is the increase really necessary to enable us to make the best out of present manufacturing conditions, but also we do hope still further to improve the actual yield on the total amount of capital invested. Naturally, I must be guarded in expressing an opinion, because we depend chiefly on three main conditions, all variable:

(1) The prospects of trade, which in our case appear to be excellent.

(2) Labour, with regard to which I am perhaps more optimistic than most people, because I still have some confidence in the common sense of my fellow-human beings, and think that the majority of our own workpeople realise that they are extremely well off compared with any other class, and in far better circumstances than they would be if they had matters in their own hands and the so-called capitalists were either not willing or not able to find them the means to use their energy and skill.

(3) Taxation, which is, of course, deplorable. Obviously the money must be found, but it seems to me extraordinary that all the experts at Whitehall cannot invent some method fairer than the excess profits tax, which is doing and is likely to do more harm to efficient business management and enterprise than almost anything else that could be conceived.

THE R.F.C. CAR.

Subject to these qualifications, which are common to most companies and to almost every form of investment, our position is sound in every way. The 25/30 R.F.C. model car is in great demand, not only in England, but in all the various countries in which it became so well known during the war; in fact, for many months to come we can sell more than we can possibly manufacture, even at the rate of 250 per month, which is the present output.

You may have heard rumours that we are discontinuing this model, but I can assure you that this is not the case; on the contrary, the R.F.C. car has been so popular and successful that we intend to continue making it for a long time ahead, putting good quality above everything, though we are not losing sight of other branches of the motor industry. I might further mention that we concluded arrangements last week by which we have purchased a large number of the Crossley vehicles supplied to the Government during the war, and we bought them on terms which will enable us to reconstruct them and send them out in good condition with our own six months' guarantee, and at a price which cannot fail to be attractive to those requiring light commercial vehicles carrying from one to 30 cwts.

In short, ladies and gentlemen, the prospective future of your company appears to be a very bright one in spite of all difficulties, even in spite of the Chancellor of the Exchequer; and I have no hesitation in recommending you to take up your individual proportions of the new issue which you have the opportunity of acquiring on such favourable terms.

The Chairman then moved the resolutions, which were duly seconded, and both resolutions (embodying the increase in the capital of the company and the alteration of the articles of association) were carried unanimously.

BRITISH ELECTRIC TRACTION COMPANY, LIMITED.

CHAIRMAN ON THE NEW LEGISLATION.

The twenty-fourth ordinary general meeting of the British Electric Traction Company, Limited, was held, yesterday, at the Holborn Restaurant, London, Mr Emile Garcke, M.I.E.E., chairman of the company, presiding.

The secretary (Mr Thomas Bower), having read the notice convening the meeting and the auditors' report,

The Chairman, in the course of his speech, said: On previous occasions I have spoken of the restrictive legislative conditions under which the electrical industry in this country has developed. I am glad on this occasion to be able to say that during the past year Parliament has passed two Acts with a view to the amelioration of the adverse conditions.

The Electricity Bill, as introduced by Government and passed by the House of Commons last year, was not a suitable prescription for a growing but impeded industry. As a result, however, of the strenuous opposition offered by the industry, aided to some extent by the commercial community, and more especially by the independent Judgment of the House of Lords, the Bill was modified by the deletion of all the controversial clauses, and was passed in the form which we suggested the Bill should take. The Government has given us this measure of freedom, but it has made the reservation that it will enact the objectionable clauses which the House of Lords deleted. It is to be hoped that the Government will announce at an early date its abandonment of this policy, for it is undoubtedly true that further uncertainty has a serious deterrent effect on enterprise in this important key industry.

The other Act—the Tramways (Temporary Increase of Charges) Act, 1920—is of importance to the electrical tramway industry. It has been passed in consequence of the inability of tramway undertakings to charge such fares under their statutory powers as would, having regard to the great increase in the cost of working, enable them to maintain financial equilibrium. It is right that I should bear testimony to the expeditious way in which the Ministry of Transport has dealt with the serious position which was produced in the tramway industry by the general economic conditions of the country.

I will now refer to the results of our operations during the past year. I am not now speaking of the whole of our operations, but of our public utility undertakings only, and even from these figures I exclude the London companies, which have to be mentioned separately. The receipts were £2,647,000, an increase of £245,000; the expenses were £1,941,000, an increase of £339,000; the working balance was £706,000, or £94,000 less. The percentage of working expenses to gross receipts was therefore 74 per cent. in 1919, compared with 67 per cent. in 1918. We did a larger volume of work, but we made less profit, both absolutely and relatively—not a satisfactory result, but unavoidable though regrettable.

LONDON UNDERTAKINGS.

The London undertakings have produced even worse results. We have a total investment of over £700,000 in London group of tramways, omnibus and electricity supply undertakings. During the past two years we have had a net revenue of only about £8,000 per annum on the portion of this capital represented by debentures and some preference stocks. In 1913—the year before the war—we received over £25,000 on about £75,000 smaller investment, and we then had good reason to hope that the yield would improve. The falling away of the profit on the London undertakings has told heavily against us. In the case of our provincial undertakings, comparing only like with like and eliminating incomparable undertakings, the operating profits have, in the aggregate, increased since 1913. If the London companies had done approximately as well, the revenue account of the B.E.T. Company would be at least £20,000 per annum better than it is. The tramway and omnibus companies of the metropolis have increased their traffic receipts between 1914 and 1919, but their expenses have increased in a much larger ratio, and at the beginning of this year they were not earning sufficient to meet their actual expenses.

It is difficult to give a satisfactory explanation why the London results are so much worse than those of provincial undertakings—the reasons are many and complex. After stating that they proposed to pay the usual dividend of 6 per cent. for the year upon the preference stock, and a dividend of 4 per cent. on the ordinary stock for the year, the Chairman went on to say: I would now like to say a few words in regard to our general policy. This company has initiated many important services of public utility. Tramway and electric lighting investments are sound propositions on the level of the reduced market valuations, but the political environment of these industries, the increasing labour troubles, and the difficulties of making adequate charges to cover the costs of the services are discouraging to new ventures. We have come to the conclusion, therefore, that it will be more profitable to the stockholders in this company to extend the sphere of our operations.

In conclusion, the Chairman said that he intended to resign the chairmanship of the company and that his place would be taken by Mr Austen.

The report and accounts were adopted, and the formal business duly transacted.

JOHN BROWN AND CO., LIMITED.

COMPANY'S WAR WORK.

The annual meeting of shareholders of John Brown and Co., Limited, was held, on the 29th ultimo, at the Royal Victoria Hotel, Sheffield, Lord Aberconway in the chair.

Lord Aberconway, in moving the adoption of the directors' report and balance-sheet, said that although peace had come, the struggle had only been transferred to economic regions. No fewer than 6,000 of their men joined the forces of the Crown—he regretted to say 600 of those laid down their lives. With regard to the others, the company had had to meet certain difficulties. It was not to be expected that men, after three or four years' fighting in Europe, could easily settle down to industrial habits again. One of the greatest difficulties had been to see that their men were provided with work that they could do, and that they fell naturally into the place assigned to them. He was glad to see that the common sense of the British workman had helped them through that difficulty, and the great energy of the company's officers and administrators had succeeded in putting things fairly straight.

Shareholders must not forget that for the last five years previous to the year under review all the resources of the company were placed at the disposal of the Government. Practically they did no civil work. They turned out in Sheffield steel products of huge size—armour plates, turbine drums, gun forgings castings for marine engines, and, perhaps not the least important, alloy steels, of which they considered themselves to be practically the pioneers.

The armour plant was idle now, and they had practically placed it at the disposal of the Government. What would happen to it he was not in a position to say. Shareholders would understand that the results of the year's working were practically exclusive of what the armour plant would have done in days gone by. They turned out about three million shells.

At Clydebank they had been occupied entirely with war work. For three consecutive years during the war every month they launched and delivered to the Government a destroyer of the very highest class and speed—37 during those years.

If they turned to the Coventry Ordnance Works, of which John Brown's owned half the capital before the war, the outputs were extraordinarily good. There were produced guns and equipment of the greatest size, including 15-inch howitzers designed by Admiral Baker, of Coventry.

The country owed a great debt of gratitude to Mr Winston Churchill, for, before the war, it was he, as First Lord of the Admiralty, who saw the value of Coventry, and reversed the Admiralty policy of turning it down and starving it.

As to Clydebank, they had achieved a record never before reached. They had produced there the biggest battleship, the "Aquitania." He was glad to see that she had done very well on her trials on oil fuel, and he hoped she would take the premier place in the North Atlantic trade. They built the "Repulse," the "hush" ship, and they had launched a still more wonderful vessel, the "Hood," of enormous size and enormous horse-power, armoured in such a way as no other ship had been armoured, and undoubtedly the last word in battleship construction.

He was sanguine enough to hope that in spite of the enormously increased costs the trade of the country would be able to support the increased wages. The enormously increased cost of materials had affected their capacity for output to some extent. There had been a great scarcity of iron ore, a terrible scarcity of pig-iron, ingots, forgings and ship plates. The ordinary materials of the steel and shipbuilding trades and stores for collieries have increased in cost since the beginning of the war from 2½ to 5 times pre-war prices. Every business man knew that to carry these stocks required three or four times the capital required before. In addition, they had the greatest difficulty in getting the materials. They could not always get the coal of the right sort for their furnaces, and the scarcity of coke was shown in the fact that the output in spite of an increased number of furnaces being in blast, had fallen 25 per cent. since 1914. The scarcity of pig-iron was one of the most disquieting features of the steel and shipbuilding position. They were able to get a large quantity of Swedish iron from the Government which had been stored on the banks of the canal during the war. Of still greater importance had been the

output of the Carnforth Ironworks, which had proved to be a most valuable feeder for John Brown and Co.

He had noticed that some of the financial papers thought that their reserves ought to have been augmented, but he inclined to the view that they ought not to add to the reserves unnecessarily at the expense of the dividend. The shareholders were entitled to a fair return on their patriotic investments, and the board were desirous of maintaining the dividend at the same rate as previously.

Sir Charles Ellis seconded the resolution, which was carried unanimously.

BARCLAY, PERKINS, AND CO., LIMITED.

A MOST SUCCESSFUL YEAR.

The twenty-fifth ordinary general meeting of Barclay, Perkins, and Co., Limited, was held yesterday at the Cannon street Hotel, London. Mr Edward Walter Giffard (chairman and managing director of the company) presided.

The secretary (Mr E. P. Pullan, F.C.I.S.) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said: We have had a most successful year, and for the first time since 1911 the directors meet you with nothing but congratulations. We have to regret the retirement of Mr Somers Somerset, but I must congratulate the shareholders on the acquisition to the board of Admiral Hall. One of the great problems ahead of us now is the remodelling of the public-house, to bring it up to modern requirements.

In 1911 the liabilities exceeded the cash and investments by £612,839, while to-day the cash and investments exceed the liabilities by £337,053. The difference is remarkable. In the four years previous to the war—that is, up to March, 1915—the improvement in the financial position of the company amounted to, approximately, £450,000. This result goes to show that our belief that all arrears of dividend would have been paid off, war or no war, was justified, and I think it also shows that the interest of the Preference shareholders has not escaped our notice.

PROFITS AND THE DIVIDENDS.

I will now ask you to follow me whilst I refer to some figures in this year's accounts. The profits, after making full provision for bad and doubtful debts, depreciation, and other reserves, have amounted to £395,511, which, added to the balance brought forward from last year (less the additional remuneration paid to the directors of £5,000), viz., £199,972, makes a total of £595,483. Out of this sum interest on the 3½ per cent. and the 5 per cent. debenture stocks has been paid, also interim dividends on the preference and ordinary share capital, making in all a payment of £148,868, which, deducted from the above figure of £595,483, leaves a sum of £446,615, from which sum the directors recommend payment of the following dividends:—4s per share on the preference share capital takes £36,000, and £6 per share (free of tax) on the ordinary share capital, equal to 6 per cent. on the original ordinary share capital, takes £61,200, or a total of £97,200, leaving a balance of £349,415. Out of this sum the directors propose to transfer £250,000 to the general reserve fund, leaving a balance of £99,415 to carry forward to the next year's accounts.

After dealing with the balance-sheet, the chairman, continuing, said: Turning to the profit and loss account, you will notice that the depreciation of buildings, machinery, furniture, freehold, and leasehold public-houses is increased by £6,569. Licence compensation levies are practically the same, the maximum levy being again imposed last year. There is a slight decrease in publicans' licence duties, and a provision of £50,000 is made on account of Government taxation. The gross profit on trading is increased by £75,918. On the other side of the account, interest on investments is increased by £7,359—due to the larger amount of the investments—and the net profit brought out amounts, as per the profit and loss account, to £339,043, an increase of £29,027 over last year.

INCREASING EXPENSES.

With regard to the future of the business, I must point out that we cannot hope to continue to make such large profits as we have done during the past year. The prices of materials have been, I believe, the highest ever recorded—at any rate, the highest we have ever paid. Malt, which is the chief item, touched 150s a quarter. I am glad to say, however, that by prudent buying we did not have to pay so much as this. The controlled price of hops has ranged from £17 10s to £22, whilst before the war we used to pay about £6. All this must be reflected in the current year's profits.

As you know, the American campaign for making the world teetotal has been going on in this country for some time. They are not at present working so much on the surface—their methods are thoroughly un-English, but they are proceeding on the same lines as they did in America. I do not myself believe they have much prospect of success. Circumstances are quite different here from what they are in the United States.

THE IMPROVED PUBLIC HOUSE.

We have heard a great deal of late, and are sure to hear more in the future, of the improved public house. Many brewers are to-day turning out improved types of houses in various parts of the country in spite of the disadvantages under which they labour, and some houses are as good as anything the Control Board can show, and there is every reason to believe they will shortly be much better. We, I think I may claim, were one of the earliest companies to go in for the improved house.

Mr A. F. Perkins seconded the resolution, which was passed unanimously, and the usual formal business terminated the proceedings.

THE DINNINGTON MAIN COAL COMPANY, LIMITED.

CHAIRMAN ON THE NEW MINES BILL.

The annual general meeting of the Dinnington Main Coal Company, Limited, was held at Sheffield, on the 28th ultimo, Mr Maurice Deacon presiding.

The Chairman moved the adoption of the report, and referred to the fact that no balance-sheet was presented in consequence of the difficulty of ascertaining the liabilities as between the Coal Mines Department and the company. The directors and auditors were satisfied, however, that from such figures as were available a final dividend of 7½ per cent., making a total of 12½ per cent. for the year, could be paid.

During the past twelve months they had been working under great difficulties. Large advances in wages had been given to the men, without any consultation with the coal owners, and control of the sale of coal had been entirely taken out of their hands. Before Government control began, the company sent a large proportion of its output to Liverpool for bunkering purposes, but that had been stopped by the Coal Controller, and Liverpool ship owners were paying twice as much for coal from South Wales as they would have to pay from Dinnington.

Discussing the new Mines Bill, he explained the system of committees proposed to be set up, and asked with such a prospect before them, how could they expect to manage their pits properly? It would be impossible for the directors to have any real control at all, and would rob the people who are most interested in the management of any decided voice in the carrying on of the pits belonging to them.

The matter was most deplorable, because it would mean that under such a regime nothing but delay, increased cost, and lack of economy would result, and in the end the public would have to pay.

The report was adopted.

The retiring directors, Mr W. D. Gainsford, Mr W. H. McConnel, and Mr A. Wightman, were re-elected, and the auditors, Messrs Alfred Tongue and Co., of Manchester, were re-appointed.

THE MALTBY MAIN COLLIERY COMPANY, LIMITED

INCREASED OUTPUT.

The annual general meeting of the Maltby Main Colliery Company, Limited, was held at Sheffield, on the 28th ultimo, Mr Maurice Deacon presiding.

The Chairman, in moving the adoption of the report, referred to the impossibility of preparing a balance-sheet for the past 12 months, until the figures had been agreed with the Coal Controller.

It was, however, sufficiently clear that a dividend of 7½ per cent. could be paid, and this was recommended by the directors.

In spite of the difficulties of the past year, the output had increased by 46,000 tons. It was still necessary to proceed with the building of houses in order to obtain men, and thereby increase the output of the colliery.

Unfortunately, the increased wages in some cases had had the effect of reducing the regularity of the men's attendance at work.

He referred to the Ministry of Mines Bill now before the House of Commons, and protested strongly against the system of committees proposed, which, in his opinion, would lead to great confusion, and deprive the colliery owners of the power to manage their own properties.

The dividend was approved, and the report adopted.

The retiring directors—the Right Hon. Lord Aberconway, P.C., and Mr W. B. M. Jackson—were re-elected, and Messrs Alfred Tongue and Co., of Manchester, were re-appointed auditors of the company.

BANK OF ADELAIDE.

The fifty-fourth annual meeting of shareholders of the Bank of Adelaide was held, on May 5th, in the board-room, Adelaide. Mr Arthur Waterhouse (chairman of directors) presided.

The annual report stated that the balance of profit and loss for the year ended March 29th totalled £87,694, out of which £25,000 had been paid in November last as an interim dividend at the rate of 10 per cent. That left £62,694, from which it was proposed to pay £25,000 in dividends, to transfer £30,000 to the reserve fund, and to pay £5,000 in respect to the bank's premises account. The balance, £2,694, added to £13,877, balance of profit and loss for last year, would be carried forward.

Mr Waterhouse, in moving the adoption of the report and balance-sheet, congratulated the shareholders on the successful result of the year's operations. The establishment of a branch in Sydney, he said, had proved a success, and since the last meeting they had been able to purchase a business in Melbourne, with premises in an excellent position. Those steps had been necessary to conserve and expand their exchange connections. To provide for the demands on their resources which might reasonably be expected from those extensions, the board had decided to increase the capital of the bank by calling up £1 a share on the 125,000 shares already issued, making them fully paid up. The figures of the ordinary business on both sides of the account showed a considerable increase compared with the previous year, and the volume of liquid assets revealed in the balance-sheet bore the very high proportion of 65 per cent. to their liabilities to the public.

The Hon. D. J. Gordon, who seconded the motion, said the year's record would compare favourably with that of any other banking institution in Australia.

The motion was carried.

WESTERN AUSTRALIAN BANK.

The 157th half-yearly meeting of the shareholders of the Western Australian Bank was held, on May 5th, at the Banking House, St George's terrace, Perth, W.A. Sir E. H. Wittenoom (chairman of directors) presided.

The report for the half-year ended March 29, 1920, showed net profit £30,535 12s 6d, which, with the balance from previous half-year, £32,970 18s 6d, gave a total of £63,506 11s. From this the directors resolved to pay a dividend of £1 per share (free of dividend duty), absorbing £25,000, and to carry forward £38,506 11s. The reserve fund amounted to £700,000, and the reserve profits to £38,506 11s. During the half-year sub-branches of Perth and Merredin were opened at Armadale and Nungarin respectively.

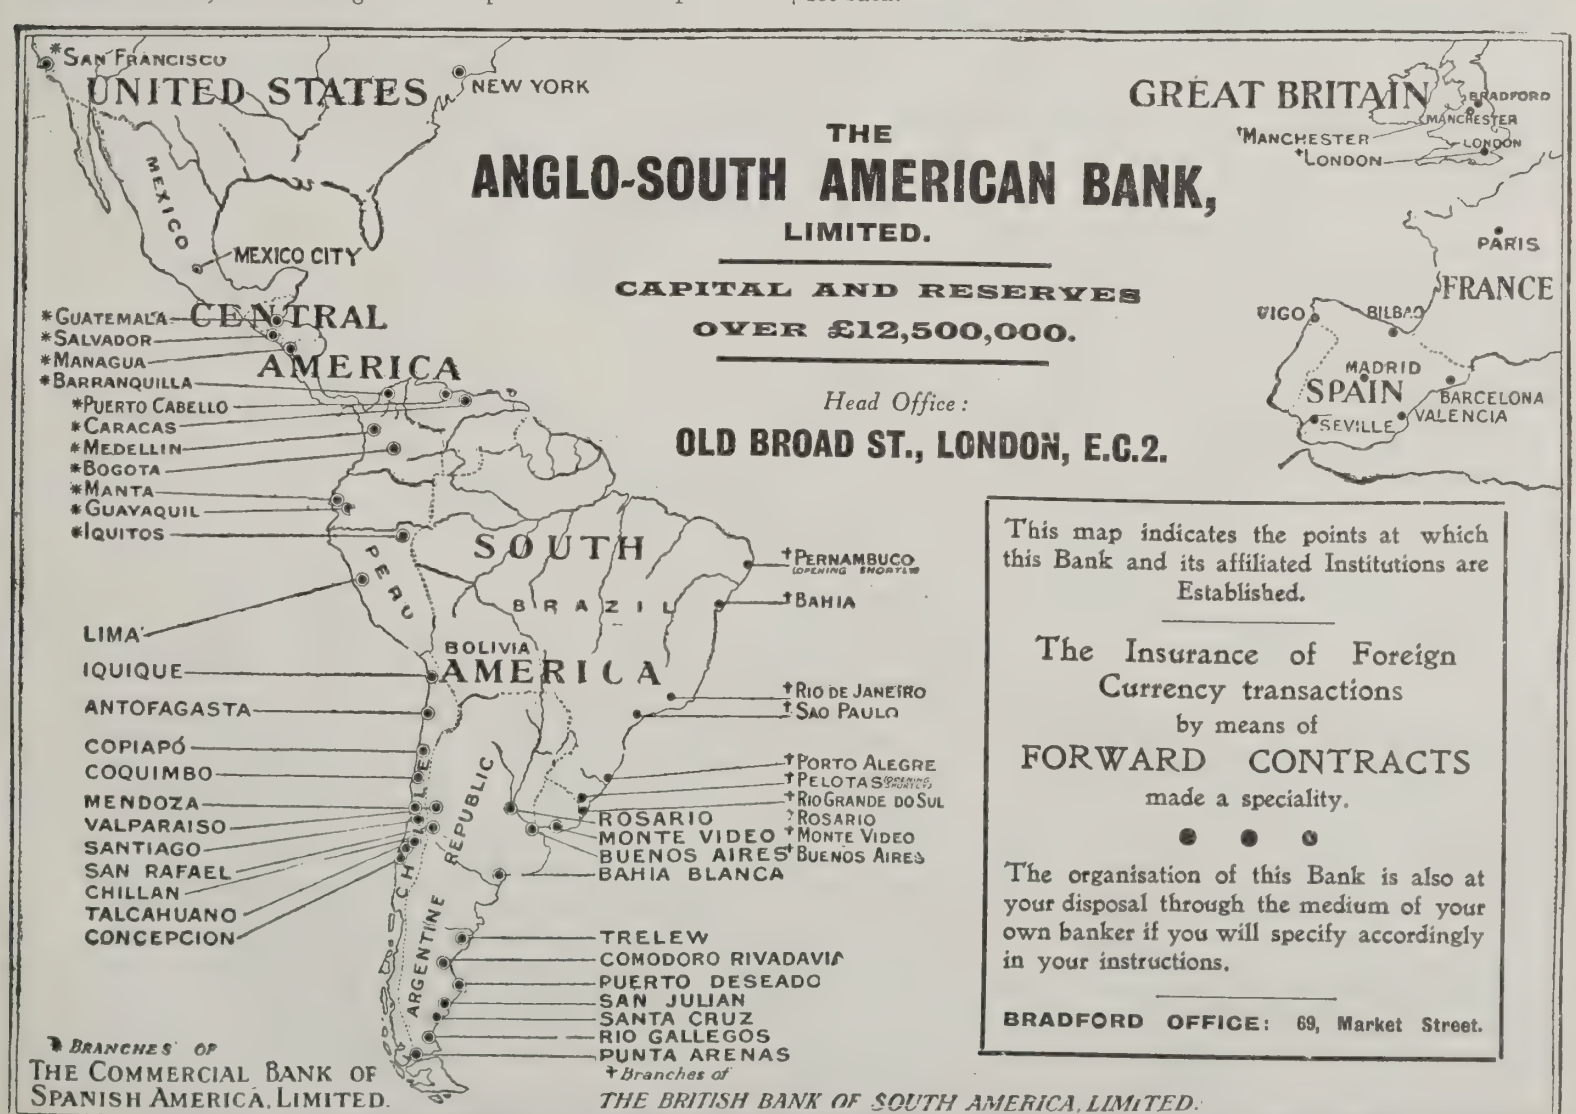
The Chairman, in moving the adoption of the report and balance-sheet for the half-year, said he thought the shareholders would agree that the operations of the bank for the six months had been satisfactory. The volume of business had been fully maintained, and it was proposed to pay the usual dividend, leaving a substantial amount to be carried forward. The confidence which the public had in the bank was confirmed and emphasised by the increase which had taken place in deposits, in spite of the numerous calls on customers for taxation purposes, increased cost of living, &c. The net profits had been more than maintained, and the amount carried forward showed an increase of £5,536 over the figures for September, 1919. Deposits showed an increase of £462,000 over the figures for March, 1919, and of £478,000 over those of September last.

Mr G. A. Lefroy seconded the motion, which was carried.

A ballot was taken for the election of a director in the place of the late Sir E. A. Stone, and resulted in the election of Mr J. MacCallum Smith.

THE NATIONAL BANK OF SOUTH AFRICA, LIMITED.

The annual general meeting of this bank was held at Pretoria on June 23, 1920, J. Emrys Evans, Esq., C.M.G. (vice-chairman of the board), presiding in the absence of the Hon. Hugh Crawford.



Reviewing the balance-sheet figures of March 31, 1920, the Chairman stated that the paid-up capital now amounts to £2,965,000, deposits £61,323,000, notes in circulation £4,327,000, cash assets £13,761,000, investments £12,185,000, all gilt-edged, and written down to or below market quotations; bills of exchange £14,429,000, while the liquid assets amount to £40,375,000, representing 58 per cent. of the bank's liabilities to the public. Bills discounted, loans, &c., amount to £32,961,000.

The Chairman referred to the very substantial increases shown in all departments, and stated that the net available profit, including the amount brought forward, was £538,683, after allocating £50,000 in reduction of bank premises, which now stand at £768,600, and making full provision for bad and doubtful debts.

The board recommended a dividend of 7 per cent. and a bonus of 1 per cent., absorbing, with the interim dividend already paid, £235,483, and also recommended the allocation of £60,000 to officers' pension fund and £200,000 to reserve fund (making the latter £1,250,000), leaving £43,200 to be carried forward.

All these recommendations were adopted, and the capital and reserve fund now amount to over £4,200,000.

The Chairman, in the course of his remarks, surveyed the mining, farming, and commercial industries, making particular reference to the continued progress of the latter, and also spoke hopefully of the country's advancement, notwithstanding a possible temporary set-back.

MALACCA RUBBER PLANTATIONS, LIMITED.

CROP PROSPECTS FOR CURRENT YEAR.

The fourteenth annual general meeting of the Malacca Rubber Plantations, Limited, was held, on the 30th ultimo, at Winchester House, London, Mr George B. Dodwell presiding.

The Chairman, in moving the adoption of the report and accounts, said that any comparison of the figures disclosed with those of the previous year must be illusory, because the whole way through 1918 the company were working under the scheme for restricting output, and, generally speaking, at almost every possible disadvantage. It was, however, interesting to note that their debenture indebtedness had now been reduced to £201,260. The output for the year considerably exceeded the estimate, and it would seem that the current year's estimate of 4,500,000 lbs was a reasonably conservative one, as they had harvested 1,577,382 lbs to the end of May, and had the most fruitful months of the year before them. The position in Malacca was now considerably easier than it was a year ago. The European staff was almost up to strength again, and as a result the condition of the plantations was improving and would continue to improve. As to native labour, he wished he could sound a similar encouraging note, but, like other undertakings of a similar nature, they found considerable difficulty in obtaining and maintaining an adequate force. The shortage of rice and the question of the Indian exchange had given the directors considerable anxiety, but the recent and rapid fall in the price of silver had afforded the employers of Indian labour in the Malay Peninsula appreciable relief. He wished that the problem presented by the shortage of rice were as susceptible to treatment by Government as that of the rupee exchange, but better crops alone would help them, and those it was beyond the province or capacity of Government to provide.

As to the position of the rubber industry at large, whereas everything they had to buy had advanced in price, and in many cases enormously, there had been no compensating rise in the price of the commodity they marketed; in fact, the tendency had been the other way, and they were selling at prices which were, if anything, lower than those prevailing before the war. That was, he imagined, the penalty of largely increased production, but he was not sure this might not turn to their advantage in the long run, because a large volume of cheap rubber meant that it was put to uses for which, were it priced higher, it might not be employed.

Mr Charles Emerson seconded the motion, which was carried unanimously, and a dividend of 30 per cent., free of income-tax, was declared for the year 1919 on the ordinary and preference shares.

DJEMBER RUBBER ESTATES, LIMITED.

FINE CONDITION OF THE ESTATES.

The eleventh ordinary general meeting of the Djember Rubber Estates, Limited, was held, on the 2nd instant, at Winchester House, E.C., Mr H. C. Hadfield (the chairman) presiding.

The secretary (Mr Graham H. Sanders) having read the notice and the report of the auditors,

The Chairman, in moving the adoption of the report, said that the shareholders would have noticed a considerable increase in the realisation of products, viz., £66,938, as compared with £28,172 in the previous year. To a great extent that was due to the high prices they obtained for their coffee, and their profits had gone up from £1,814 in 1918 to £36,185 in 1919. As usual, they had charged all expenditure on both productive and non-productive areas to revenue. The report stated that there were 1,641 acres of rubber in production. That was somewhat misleading, as on a considerable part of that area only a percentage of their trees were being tapped. As a matter of fact, only one-half of their trees were yet in bearing, and they were producing half a million pounds of rubber from one-half of their trees, therefore their ultimate output from the old estates was likely to be doubled in the course of time. The average price obtained for their rubber was about 1s 8d a lb. This seemed low, but the shareholders must bear in mind these were guilder sales obtained in Java, and the exchange was against them all the year. Had the rubber been sold in London the price would have been higher, but the costs would also have been considerably more.

Mr Jacobson, their general manager, who had been the means of bringing the estate to its present excellence, was, he regretted to say, leaving them, after nine years. His contract was up, and he was coming to Europe. The directors were hopeful that he would decide to return to Java after a holiday, and act as visiting agent to both the old estate and the new. They had appointed as manager Mr. Stanley Miller, who had been for nine years with them under Mr. Jacobson. The board recommended a dividend of 25 per cent., less tax, making 32½ per cent. for the year, with a carry forward of £32,610, out of which provision had to be made for taxes.

Mr W. O. Burt, in seconding the motion, said that he had just returned from Java, where he had thoroughly inspected their estates. He congratulated the shareholders on the possession of such a fine property in such first-rate condition. The soil was a fine sandy loam of great depth, and at no part of the estate could he find any trace of poor soil. The upkeep of the field was all that could be desired.

The resolution was carried unanimously, the dividend as recommended approved, the retiring director and auditors re-elected, and a resolution passed increasing the remuneration of the directors.

J. G. WHITE AND CO., LIMITED.

COMPANY'S SOUND AND CAUTIOUS POLICY.

The twenty-first ordinary general meeting of J. G. White and Co., Limited, was held, on the 29th ultimo, at 9 Cloak lane, London, Mr George Macaulay Booth (the chairman) presided, and, in the course of his speech, said: We are satisfied that the results are as good as can be expected, and we are glad to be able to report that our general position for future business is entirely satisfactory. A year ago I ventured upon a word of warning. We are determined to pursue a policy of extreme care. We are doing everything that is possible to consolidate our position and our resources. Consequently the year's trading has been quiet and our profit moderate, and the year in front of us is likely to find us less aggressive, and satisfied if we hold our own without loss.

Your directors are convinced that it would be a mistake to embark on any large enterprise at this juncture about the completion of which, on financial grounds, they do not feel entirely independent of money market conditions. The period of readjustment after the war has begun. It will certainly last some years, and in the earlier stages some acute moments of distress are, I believe, bound to occur, and in my opinion the year 1920 is bound to contain perhaps the most acute of these crises. The best we can look forward to is that we shall emerge from the storm stronger and fitter by reason of the hard work we are doing, endeavouring to improve our technique and our organisation and our judgment of the work that will be most suited to us when once again enterprise can be allowed freer scope.

Apart from new work the year has been valuable. The distant properties which we manage have been visited. Mr Julius has been able to report extremely favourably as to the upkeep and maintenance and general efficiency he found prevailing everywhere. Plans have been made for additions and improvements, which are being gradually carried out, and we can, I think, congratulate ourselves on having come through the war period with conspicuous success. The general trading business which we now conduct under the name of J. G. White Commercial Company has been working under particularly difficult conditions. We are progressing satisfactorily. As with the engineering business, we are pursuing a conservative course. Our new branch offices are gaining in experience and we have great confidence in the organisation.

You will have noticed reference in our report to the Consolidated Construction Company. The result of the amalgamation of our own construction department with that of Messrs Dick, Kerr and Co., Limited, is entirely satisfactory.

The report and accounts were adopted.

HOVIS, LIMITED.

CONTROL OF THE MILLING TRADE.

The ordinary general meeting of Hovis, Limited, was held, on the 30th ultimo, at Caxton Hall, London. Mr J. Browne-Martin (chairman of the company) was present, but, not being well, requested Mr A. H. Dence to conduct the meeting.

Mr Dence said that the accounts referred to the year ended March 31, 1919, and the directors' report was in respect of the year ended March 31, 1920. The reason for the delay in the accounts was that they were still controlled by the Food Controller. They continued to conduct their business in the ordinary way, so far as the regulations of the Food Controller would permit, but, instead of making a profit, they were paid a remuneration by the Ministry of Food based on their pre-war standard of profit, in like manner as calculated for the purpose of excess profits duty. Such remuneration was not adequate, seeing that the value of money was now only one-third what it had been in the pre-war period. The millers, through their association, had applied for an increase. The matter was being put before the authorities, and the directors awaited their decision with interest, as it did not seem probable that it would be practicable for mills to be decontrolled at an early date, in view of the situation of wheat throughout the world. As an example of the way in which control was affecting them, the amount which they spent on general advertising every year had been reduced by an order of the Ministry to 50 per cent. of the average in pre-war periods.

They had therefore met with difficulty in maintaining the name of Hovis before the public as it should be. When the final day of reckoning came with the Ministry of Food, that was a matter which would require their most careful attention, because the State, whose duty it was to treat all with the same degree of equity, ought not to penalise one trade more than another. The additions to capital during the year included the purchase of a mill at Andover, from which they trusted that when the control was over they would reap due benefit. Allowance for depreciation was about the same as usual, and was on the conservative side. They would remember that when last they met they had devoted the sum of £4,500 to paying the final dividend for the year ended March 31, 1919, placed £10,000 to reserve and carried forward £19,660. With regard to the report, the directors felt that an increase in the rate of dividend was justified, but that it was their duty to adopt a conservative attitude with regard to finance as the best means of maintaining and strengthening their position and making provision for the time when control would be finished with.

The report and accounts were unanimously adopted.

LIEBIG'S EXTRACT OF MEAT COMPANY, LIMITED.

SUCCESSFUL RESULT OF THE PAST YEAR.

The fifty-fifth ordinary general meeting of Liebig's Extract of Meat Company, Limited, was held, on the 1st instant, at the Cannon street Hotel, London, Mr Maurice G. C. Glyn presiding.

The accounts showed a balance profit, including the amount brought forward, of £575,083. A final dividend of 10 per cent. (making 20 per cent. for the year) and a bonus of 5s per share, both free of income-tax, were declared.

The Chairman explained that Mr C. E. Gunther, the chairman and managing director, was at present on a visit to South America, along with Mr Follett Holt, with the object of inspecting the company's properties and looking into the business generally.

Dealing with the past year's working, he stated that notwithstanding the disturbed conditions which had to be met in the change over to peace conditions, the directors were able to show a successful result. The killings at the company's River Plate factories, while on a smaller scale than those of the war years, were more or less normal compared with the immediate pre-war standard. Both the factories, which had been working without intermission during the four preceding years, had been subjected to a thorough overhaul, all necessary repairs and renewals being effected.

The prices realised for their hides, tallow and other by-products were satisfactory. The shipping position, although at times rather difficult, was not such as to affect seriously the movement of the company's produce, and now showed signs of becoming easier.

RIVER PLATE ESTANCIA BUSINESS.

The River Plate estancias had once more enjoyed a good year, and showed favourable results. The period was one of steadily rising cattle prices, although some reaction had since set in, particularly for cattle suitable for canning, the demand for which had for the time being fallen off. The sale of pure-bred bulls had been developed until it was now a most important and remunerative part of the estancia business, affording a valuable source of revenue. The company's interests in Paraguay were being developed in a manner that augured well for the future, although progress there must necessarily be slow.

In Rhodesia further section camps had been established to deal with the increasing stocks of cattle, and there were now nine section camps besides the main camp. Satisfactory prices were realised for the surplus cattle.

The company's properties in South-West Africa had been recently placed under new management, and the work of reorganisation was actively proceeding. It was hoped that, as the country settled down and development proceeded, competition for cattle would become keener and that prices would tend to improve.

The sales in the United Kingdom had been well maintained, and they had been able gradually to resume business in some of the Continental countries, where they were regaining markets which could not be adequately supplied during the war.

One of the most important matters engaging the attention of the chairman of the company and Mr Follett Holt at the present time in the River Plate was the question of refrigeration, the object of which was to utilise to the best advantage the good supplies of cattle which they now had available, and which were fully up to refrigeration standard. If it were decided to proceed with this undertaking, which would entail considerable fresh plant, it would be necessary to raise additional capital.

The report and accounts were unanimously adopted.

† Rates lowered ½% on Jan. 2, 1918, and lowered ½% on Feb. 14, 1918, but raised ½% on Oct. 6, 1919, and ½% on Nov. 6, 1919, and 1% to 5% on April 15, 1920. ‖ Lowered from 3½% to 3% on June 5, 1918, but was raised to 3½% on July 31, 1919, to 3¾% on Oct. 6, 1919, to 4½% on Nov. 6, 1919, and 5½% on April 15, 1920. * Changed from 4½% to 4% on Dec. 27, 1917, and from 4% to 3½% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3⅜% (July 14 to August 15, 1919, period of daily sales); three months, 3½%; six months, 4%. On October 6, 1919, the three months' Treasury bill rate was raised 1% to 4½%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4½% to 5½%, and the six months' rate from 5% to 5½%. On March 19, 1920, daily sales of six months Treasury bills at 5½% were replaced by twelve months' Treasury bills at 5½%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5½% to 6½%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

New South Wales	4,599	West Coast of Africa	1,741
		United States	580,000
		Straits Settlements	123,190
		Egypt	107,750
		Bombay *via* Other Ports	2,238,060
Total value of imports of gold	941,153	Total declared value of exports registered in the week	3,054,212

Messrs Samuel Montagu and Co. write on June 30th as follows :—"Gold : Only a small amount of gold was available this week ; it was taken for America. Silver : The market has been of a steady character since we last addressed you, mainly on account of speculative purchases and the scantiness of supplies from the Continent. On the 28th inst. there was quite a sharp rise of 2½d in the price for prompt delivery owing to bear covering. The tendency at the moment is rather uncertain, as the apparent steadiness has not been the outcome of strength imported from India or from China. In the case of the former, exchange has been extremely weak—a factor against purchases for the Indian bazaars — whilst in the case of the latter, Chinese exports are still almost immobile. A certain amount of selling from New York has been elicited at the higher rates current the last few days.

INDIAN CURRENCY RETURNS.—(In Lacs of Rupees.)

	June 7, 1920.	June 15, 1920.	June 22, 1920.

NOTICES.

At a board meeting of the Swiss Bank Corporation, held at Basle on the 28th ult., Mr Leopold Dubois, hitherto managing director, was elected president of the corporation, and Mr Charles Schlumberger a second vice-president. Mr F. Zahn-Geigy continues to act as first vice-president.

Advice received from Montreal that the branch of the Bank of Montreal, at Williams Lake, B.C., formerly a sub-agency to 150 Mile House, is now giving a daily service.

The Standard Bank of South Africa, Limited, announce the opening of an agency at Gordon's Bay, near Somerset West, in the Cape Province.

The London Joint City and Midland Bank, Limited, announce that offices are now open at 2 Cheapside, High road, Wood Green, London, N. 22, under the management of Mr William H. Salter, of the Harringay branch, and at the corner of Collindale avenue, Edgware road, Hendon, London, N.W. 9, under the management of Mr A. C. Foreman, of the Willesden Junction branch.

The Guaranty Trust Company of New York will open on July 5th an additional office at No. 50 Pall Mall. This office has been designed to meet the needs of the section for an American Bank, and to remove some of the congestion brought about by the growth of the company's business at its office at 32 Lombard street. R. E. Randolph, assistant-manager of the London office, will have charge of the Pall Mall office, and will be assisted by W. E. Hitchcock, assistant-secretary.

Branches of the Merchants' Bank of Canada have been opened at Toronto, Ontario (Broadview and Danforth), Kagawong, Ontario.

The London office of the Union Bank of Canada announces that a branch of the bank has been opened at Oshawa, Ontario.

Reports and Notices.

We are informed that Messrs Wm. F. Malcolm and Co. have admitted Mr Ernest Wilson, who for many years has been the manager of their flax business in Russia, into partnership in the firm.

The directors of the Ocean Accident and Guarantee Corporation, Limited, have appointed Mr William Singleton Hooper, who has held the position of assistant-manager for the past ten years, to be manager and secretary, Mr William Langton Cavers to be assistant-manager, and Mr Christmas Evans to be assistant-secretary, as from July 1st.

Sir Alexander Hargreaves Brown, Bart., having retired from the board of the London Scottish-American Trust, Limited, Mr Walter Hargreaves Brown, of Messrs Brown, Shipley, and Co., has been appointed a director to fill the vacancy.

It is announced that Mr A. J. Cruickshank has been elected a director of the Leopoldina Railway Company, Limited, and of the Leopoldina Terminal Company, Limited.

We are informed that Mr Emil Teichmann has retired from the firm of C. M. Lampson and Co., of which he has been a partner for more than forty years. They have taken into partnership Mr Robert William Fraser, youngest son of their late partner, Mr Alfred Fraser, who has for many years past been associated with the firm in New York.

GOVERNMENT STOCKS, &c.

COLONY OF THE CAPE OF GOOD HOPE, CITY OF CAPE TOWN.—5 per cent. municipal loan £150,000, second issue of £100,000. Notice is hereby given that the City of Cape Town Corporation is prepared to repay at par during the month of July, plus accrued interest, all outstanding bonds of the above-mentioned issue. Holders who are desirous of availing themselves of the Corporation's offer should present their bonds for payment at the office of the Standard Bank of South Africa, Limited, London, E.C. 4. Bonds should be left three clear days for examination at the bank's coupon office, 27 Nicholas lane, E.C. 4.

BANKS.

BANCO NACIONAL DO COMMERCIO.—The twenty-fifth annual report of the Banco Nacional do Commercio (Porto Alegre, 1920) is of public interest in view of the increasing commercial importance of the temperate regions of Brazil. The bank, started very modestly in 1895, established its first branch in 1900, and two more in 1910; it now has 51 in the four States of Rio Grande do Sul, Santa Catharina, Parana, and Matto Grosso, 15 being housed in handsome premises of its own. It has a host of correspondents in all four States, and is represented in every State of the Union, and in many commercial centres abroad. Its figures show a sudden and rapid expansion of business shortly before and during the war, and it claims with reason to have done a public service in familiarising the up-country public with bills of exchange. It maintains an information office in order to increase the "current of cereals and chilled meat" from Southern, Brazil to Europe.

BANK OF ADELAIDE.—The report of the year ended March 29 1920, shows profits of £87,694. A sum of £35,000 is allocated to depreciation and reserve, and the 10 per cent. dividend absorbs £50,000. The balance of £2,694, added to the amount of £13,877 brought in, leaves £13,877 to be carried forward. The report states: "During the year we have purchased on favourable terms the business of the Australian Deposit and Mortgage Bank, Limited, including that bank's premises at 267 Collins street, Melbourne, where a branch was opened on January 2nd last." Deposits at March 29th last are shown as £6,380,056.

NATIONAL BANK OF SOUTH AFRICA.—The report for the year ended March 31, 1920, states that, after making full provision for bad and doubtful debts and applying £50,000 in reduction of bank premises account, the net profits are £538,683, inclusive of £23,206 brought forward. The bank's investments stand at or under the present market prices. The directors recommend that the profits be apportioned as follows:—Dividend of 7 per cent. (of which the interim dividend paid for the six months ended September 30, 1919, absorbed £102,058), plus a bonus of 1 per cent., £235,483; reserve fund (raising it to £1,250,000) £200,000; pension fund, £60,000; balance to be carried forward, £43,200.

THE BRITISH AND NORTH EUROPEAN BANK, LIMITED, announce that "the bank will commence business on July 1st next," and that "members of the board of the Russian and English Bank and its staff will be employed by, and will work for, our institution."

WESTERN AUSTRALIAN BANK.—The report for the half-year ended March 29, 1920, shows net profits of £30,535, to which has to be added £32,971 brought forward, making £63,506. A dividend of £1 per share, free of duty, is recommended, and £38,507 carried forward. The reserve fund is now £700,000. Deposits are shown in the balance-sheet as £3,383,009 at March 29th.

ASSURANCE.

LIFE ASSOCIATION OF SCOTLAND.—The report for the year to April 5th shows that the boom in life assurance continues. The net new assurances were for £1,117,920 at premiums of £52,923, the largest amount transacted in any one year, and practically double the average annual amount during the five years before the war. The claims were 76.7 per cent. in number and 84.8 per cent. in amount of those expected by the mortality tables. The funds increased by £68,520, to £5,920,942, and the net rate of interest received, after deducting tax, was £4 0s 2d per cent. Cash bonuses to policyholders in Class A (old series) were allocated at the previous rates. The dividend to shareholders for the year was £1 1s per share, less tax.

MISCELLANEOUS.

LONDON SOCIETY OF CHARTERED ACCOUNTANTS.—A company, limited by guarantee, has been formed under the title of "L. S. C. A., Limited," for the purpose of establishing a society of chartered accountants for London, and a committee has been appointed, of which Mr Charles Comins, F.C.A., is the chairman.

LOBITOS OILFIELDS.—The report for 1919 states that the net profit, after deduction of all charges and depreciation, amounts to £107,265, which, with £36,547 brought forward, gives total amount at credit of profit and loss £143,812. The directors recommend dealing with this as follows:—Interim dividend of 5 per cent., less tax (paid), £14,000; to reserve, £50,000; final dividend of 15 per cent., less tax, £42,000; and carry forward (subject to excess profit duty, if any), £37,812. The production for 1919 was 91,460 tons, as against 85,213 tons in 1918.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions continue favourable for growing crops, which generally give favourable promise, and there is every indication of an earlier harvest than usual. Farmers are busily occupied getting in the hay crop, which is of fair extent in the Home Counties, while very heavy in other parts of the country. Small supplies of native wheat are readily absorbed at the maximum price of 90s per qr, 504 lbs, delivered. Imported descriptions are moderately offered at official fixed prices. Shipments were on a fairly liberal scale, comprising North American, Argentine, and Australian qualities. Crop news from the principal exporting countries continues favourable, the bulk of the winter wheat crop in the United States is practically assured, while spring sowings, both in the United States and Canada, are making satisfactory progress. Further beneficial rains are reported in Australia, and it has been officially stated that the acreage under wheat in the Western State totals 3,000,000 acres, against 1,000,000 last year. Prospects on the near Continent are also maintained. On c.i.f. terms, fair quantities have been allocated at official prices, including North and South American, Pacific Coast, and Australian grades. The demand for home-milled flour continues steady, while the limited quantity of imported released was readily absorbed, and quality of the latter shows some improvement. There was a moderate inquiry for low grades at unchanged prices. English C.R. grade quoted at 63s 6d per sack, ex mill, and imported descriptions 65s 9d per 280 lbs ex store. Mill offals were officially raised 30s per ton. Liberal shipments occurred from North America, both on U.K. and Continental account. Maize dull and weaker, in sympathy with lower c.i.f. offers, and Plate ex ship quoted 66s; ditto landed, 68s. 6d. The forward market was depressed, and values declined sharply, owing to increased offers of new crop by shippers and lower Argentine freights. Steamer cargoes, July-August and August-September, offer at 68s, which, however, appears to be above the market, while parcels of ditto May-June sold, 68s to 67s; June-July, 67s 6d to 65s; July-August, 67s 9d to 65s 6d; August-September, 68s to 66s and 66s 3d. For No. 3 mixed American, July-August, 100s is asked. Government allocations of Plate were made to Ireland at 70s, quay terms. Barley trade quiet on the spot, with limited offerings, and native varieties quoted at 90s to 115s per 448 lbs, according to quality. Imported descriptions largely nominal, in absence of offers. Plate nominally 80s, landed, per 400 lbs. On c.i.f. terms. rates are easier, with a slow demand. Morocco, f.a.q., July-August, sold at 74s per 400 lbs; Californian, superior, August-October, done, to Liverpool, at 101s per 448 lbs. Shipments from North America are on a light scale, and considerably below the quantity at this time last year. Crops in the American North-West and Canada show good condition under favourable weather, while European prospects are maintained. Oats are in slow request, and values weak for imported, owing to liberal and cheaper offers by Plate shippers. Native descriptions, however, are very sparingly offered, and bring full rates—up to 80s per qr, 336 lbs. Plate, landed, 56s, and Amerincan white clipped 59s per 320 lbs ex store. On c.i.f, terms, Plate, f.a.q., June-July, sold from 51s to 47s 9d per 320 lbs. Beans and peas quiet, and prices tend easier. Oatmeal also weak in value. Lentils quiet, unaltered. Homeward freight markets have ruled quiet for grain, and rates generally easier, with tonnage supplies plentiful. From Montreal, heavy grain quotes 12s 6d to 13s per qr, with 12s 6d from northern range ports U.K. and 13s

THE IRON AND COAL TRADES.

Our Glasgow correspondent (writing on Thursday) says :—There is no slackening off, nor sign thereof, this week in the pressure for deliveries, on contract, of raw and manufactured iron and steel material. As regards Scotch pig-iron, makers report that though the furnaces are working better than of late, they are still two to three months behind in their deliveries, and that several are declining to book until the adverse balances are somewhat reduced. Export demand is keen, and buyers are offering from 5s to 10s a ton on current terms, £16 5s to £16 10s a ton for supplies. But nothing is going through to the Continent, and only about 10 per cent. of the outputs to our colonies, which producers are anxious to retain as far as they can. Shipbuilders keep exceedingly busy, and admit that, while many negotiations for new boats have been suspended, they have well-filled books to look ahead to. Steel makers are turning out an enormous tonnage in plates, especially angles and sections, and yet consumers' claims are not nearly met, and this though large quantities are being brought into the Clyde from English districts. Some lots of American steel have also come to hand, but the fact carries, after all, no great significance, for U.S. shipments have always formed a factor on the Clyde in prosperous times. Boiler plates are not obtainable locally under £30 10s; ship plates, £26 to £33; and angles, £25 10s. Bar iron makers are still naming £30 per ton for Crown quality, but this week they have been confronted with offers from Belgium of ordinary bars at £5 per ton lower. Inquiries for steel sheets are as active as ever, with deliveries far behind, and quotations strong at from £38 10s to £44 a ton. English makers of steel sections are selling large quantities for roof and bridge building at considerably under Scotch quotations. Tube makers have been booking more export orders, while home needs are above the average. The one drawback in all engineering departments is the inadequacy of supplies to requirements. Export business in coals practically nil, but all production is readily absorbed by the home industrial market.

Our Sheffield correspondent writes :—There is a noticeable decline in the volume of business being booked in Sheffield, and a feeling of pessimism with regard to the future of the iron and steel trade is spreading. July is always one of the quietest months of the year, because most firms are taking stock and balancing up, and it is necessary to keep down deliveries to the minimum before that operation. The Japanese market has ceased to count, and foreign business is being held back owing to the inflated level of prices. The United States is underquoting this country for certain classes of steel in overseas markets. Although British prices are not coming down, sellers cannot command the premiums on those which have been paid until lately. The mills have plenty of work for the present, and deliveries of mild steel are still considerable. Things seem very bad, however, in the tool steel department, owing to a paucity of orders from the engineering and many other branches of industry. Outputs at the collieries are being maintained, and the stoppage of exports enables works to obtain supplies of fuel more easily, but there is no considerable surplus tonnage at present. The scarcity of small fuels is less marked than formerly. The demand for house coal is quiet, as the public show no desire to get in supplies for the winter. Current quotations per ton at pits are : Best South Yorkshire hards, 33s 2d to 33s 8d; do Derbyshire, 22s 8d to 33s 2d; best Tyne steams, 140s; steam cobbles and nuts, 31s 2d to 32s 2d; washed smalls, 28s 8d to 30s 2d; small slacks, 23s 2d to 24s 2d; branch, 37s 2d to 37s 8d; best Silkstone, 33s 8d to 34s 8d.

Our Middlesbro' correspondent's report, dated July 1, 1920, is as follows :—Pig-iron.—Business is difficult, as there is so little iron for sale. We can barely supply local needs, and only a portion of the iron required by Scotch foundries. There has been no change in quotations this week, and prices are 217s 6d for No. 3 and No. 4 Cleveland G.M.B. foundry pig-iron, and 260s for mixed numbers East Coast hematite pig-iron. Manufactured iron and steel.—The second half of the year commences with a very strong inquiry for steel of all classes. There is certainly no falling off in the demand for steel. Steel ship plates, home, £23; steel ship angles, £23; iron ship angles, £30 15s; iron bars, £30; steel rails, £23. Iron ore.—Business is very quiet. Consumers' stocks of Swedish ore are getting low owing to the strike at the Swedish mines.

THE COTTON TRADE.

MANCHESTER, July 1.

The amount of business passing in the market has not shown any improvement, and sellers have reported a very dull state of affairs. It is quite evident buyers are not yet ready to operate on a freer scale, and, of course, the longer the waiting policy continues, the greater will be the fall in prices, as spinners and manufacturers are losing ground from day to day. A fair amount of inquiry has been met with in cloth from India, and prices have been mailed on a considerable scale to Calcutta, Bombay, and Madras. Any immediate revival of buying is not expected. Merchants are determined that China customers shall carry out their obligations, and requests to cancel contracts are being refused. No news of any importance has been received from the Near-East, and the political situation is against any trade development. Very few orders have been booked in home trade fabrics. More manufacturers have been prepared to grant price concessions. American yarns have been in slack request, and there has been increased irregularity in quotations. Export bundles may be described as inactive. Prices in Egyptian spinnings continue to give way, and trade has been very slow.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—A good deal of interest has been aroused in the wool trade this week by reports of a big deal in Colonial wool. It has been stated that a Bradford syndicate purchased from the Government about 100,000 bales of Colonial wool which had been withdrawn from recent auctions, the purchase price being estimated at about £4,000,000. It was suggested that this wool had been purchased in order to reclothe the German textile machinery, the inference being that a group of men in this country would finance the raw material. Inquiries, however, have failed to reveal anything of a definite nature to substantiate the alleged deal. As a matter of fact, Sir Arthur Goldfinch (Director-General of Raw Materials) states in an official announcement that no important sale of Government wool outside the auctions has been made for some months past, neither do any arrangements exist, nor are they under contemplation, for selling wool to Germany through individual firms. Sir Arthur points out that it is open to all buyers of Government wool to send wool to Germany on their own account and at their own risk, if they care to do so. Wool which is not sold at public auction on account of the reserve price not being reached, may be purchased privately from the Government at not less than the reserve price. Sir Arthur Goldfinch adds that transactions of this character were frequent, and on a fairly large scale, during the early months of this year, especially in regard to low crossbred wool, but during June few inquiries of this sort have been dealt with. Owing to the large withdrawals at recent auctions, an exceptional number of lots is available for sale on these terms at present.

Trade in the Bradford market is still very restricted, and prices generally show a declining tendency. There is only a small turnover in tops, but as several forced sales are being made on account of financial stringency, topmakers' quotations show rather wide discrepancies. The absence of new business in yarns is causing yarn prices to ease, especially in botanies, and some cheap secondhand lots are still being offered. Manufacturers are still well employed, but there is practically no new business either on home or foreign account. It is indicative of the state of trade that at the sale of Government-owned wool at Hull yesterday, about 70 per cent. of the offerings was withdrawn. For the lots sold, prices were practically unchanged from those ruling at Liverpool last week, and at the close of the last series of London auctions.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

A rumour has been circulated during the past week to the effect that a Bradford syndicate has purchased 100,000 bales of Colonial wool for shipment to the Continent, but in well-informed quarters it has been received with a considerable amount of reserve. It seems improbable for such a statement to be made without having some foundation. If this weight of wool has been bought, it represents a deal amounting to about four million sterling, the purchase probably being the wool withdrawn at the last London sales. If so, the Government will have been greatly relieved, for they were carrying a heavy responsibility. It has been known for weeks that negotiations were proceeding with one or two associations representing a combination of spinners and manufacturers in Czecho-Slovakia. Negotiations have also been proceeding with both Germany and Poland. The above purchase, if actually made, will help to re-establish the industry, and pave the way for further purchases. Travellers recently returned from the Continent state that Germany is in dire need of textiles, two Bradford merchants and topmakers who have been in the country being unable to purchase any wool underclothing at any price during the past fortnight. It is to-day being recognised more than ever that the sooner Germany can be brought back into commerce the better it will be for the entire trade. The wool will probably have been sold at Government reserve prices, and if so, even though the level will be lower than what was expected at the last sales, the authorities have taken the right course in allowing the wool to go. It should now be the policy of those responsible for selling the nation's wool to let it go if a decent market price can be obtained. There is no chance of anything like decent values obtaining for the raw material; in fact, they are not wanted. The maintenance of prices on the recent high basis is of infinitely less importance than that the Continental trade should be re-established. The sooner this is done the better it will be not only for the Continental countries themselves, but also for the British textile industry. It is understood that German firms have done well in combing and spinning the wool recently sent to them to be put through on commission. The work done is spoken of by Bradford manufacturers as being highly satisfactory.

Next Tuesday another series of London sales will commence, when 105,000 bales will be catalogued. It is very doubtful whether the clearance of the wool mentioned above will help to stop the downward tendency of prices. The entire textile industry of Great Britain, France, and America has received such a blow through cancellations and the absence of new business, that there is little likelihood of any advance in prices compared with last series, or any marked improvement in demand. Buyers will do well if they absorb all the wool catalogued, and the Department will be wisely advised not to be too particular about adhering to their reserves. If there is the least buying spirit, the market should be met, for this will be the means of establishing a more reliable basis of values than exists at present. This is really what the home trade are waiting for, and if it is afforded at the forthcoming sales great help will be given to the establishment of confidence and the stimulation of trade generally.

OILSEEDS AND VEGETABLE OILS.

An active demand for linseed oil, both for home consumption and for export, led to a good trade being done, and an appreciation of value, £78 10s being paid for raw oil, ex mill Hull, for spot and near delivery, the same figure being quoted for August-December. Realisation at the close of the month, however, had the effect of depressing the market, re-sellers on Tuesday taking down to £74 15s. Otherwise the market has shown steadiness, prices generally being such as to invite at times a strong demand. A good trade has also been done in cotton oils of all descriptions round last week's values. Rapeseed oil has ruled consistently dull. Palm kernel oil is well inquired for for forward delivery, and a fair business is doing in deodorised soya bean oil on Continental account. Values of vegetable oils, taken all round, do not, however, show signs of a marked revival, supplies being fully ample to meet all demands, and crushers content to do a steady business on more or less normal lines.

The seed market has followed pretty closely the fluctuations in oil, though so far as linseed is concerned shippers' quotations are still too high to stimulate anything like a substantial demand. Oil moving off rather more freely has, nevertheless, caused more interest to be taken in seed, without, however, much direct buying having been done. On balance, prices of both Indian and Plate linseed are perhaps a shade lower on the week, more particularly for shipment. At reduced figures a good business has been done in Egyptian cottonseed for shipment, and the same may be said of Bombay, new crop being purchasable at £13 spot and August-September. Palm kernels have rallied to the extent of £3 on the week.

Linseed continues to arrive in large quantities, in addition to which there is on passage to the United Kingdom 47,500 tons, and to the Continent 32,400 tons; and of cottonseed to the United Kingdom 14,900, and the Continent nil.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The recent resolution passed by the members of the United Tanners' Federation, by which the input of hides was to be reduced by 50 per cent. as from the 1st of July, appears to have a steadying effect on the position of hides, and prices at the local auction held here in Bermondsey on Thursday last did not have the upward tendency noticeable for the past two or three weeks. Only the three top weights in ox and heifers advanced in price, while cows, bulls and casualty hides changed hands at last week's figures to a decline. Kips in all classes were 1d down, and calf skins slightly firmer on the whole. Sheepskins continue to depreciate in value, the declines recorded this week ranging from 1s to 3d per skin. Foreign hides have been dealt in a trifle better during the week, but this has been due more than anything to the upward trend of market hides, and any set-back in the latter is expected to be reflected in the position of imported goods.

The demand for leather of all descriptions continues dull, and although small sales are being made at prices which in some cases show a reduction, nothing in the way of bulk business is being done. As a matter of fact, large buyers are still of the opinion that the bottom in regard to prices has not yet been reached, and it is therefore useless to try and push business, as more often than not this is taken as a further sign of the weakening tendency of the market. Sole leathers only find buyers who are in actual need of stuff for immediate requirements, and then only in the better grades, while the demand for dressing leathers is practically non-existent at the moment, buyers apparently having covered themselves for some considerable time ahead.

In the upper leather section the position is very much about the same, as shoe manufacturers have very few orders on their books with plenty of finished boots on their shelves, and are not prepared to commit themselves further in regard to leather in view of the difficulty in disposing of their manufactures.

An interesting recent event in the City is the opening of the Guildhall Rooms, 20 and 22 Wool Exchange, E.C. (close to the Basinghall street entrance) for the sale of Antique Furniture. The Proprietor, Mr Arthur Meakin, informed the writer that his object is to provide in a part of London hitherto neglected a place of interest for lovers of the antique, and he also pointed out that, owing to the high price of modern furniture, it is possible to obtain genuine old pieces which compare favourably in price with those of modern make. Among many attractive things were a fine oyster walnut chest, a Georgian dining table from Baker's Chop House, a Sheraton side table and a genuine period Adams mirror. The rooms are situated centrally, a stone's throw from the Guildhall, and a short time could be spent there profitably by collectors.—[ADVT.]

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, July 2.

General trading was again carried on quietly, buyers showing no disposition to exceed pressing requirements, and transactions in forward shipments were reduced to a minimum. As regards sugar, it was announced that West India descriptions were free of official restrictions as far as trading on manufacturing account was concerned, and prices receded, especially for crystallised. Fibres keep very quiet, with a downward tendency in prices, and all brush descriptions are still very neglected.

SUGAR.—Unaltered for grocery purposes, with fair allotments. Only small sales were effected for manufacturing account, including American granulated at 160s; crystallised West India, 140s to 141s. Honey sold slowly at previous quotations. American syrup difficult of sale.

COFFEE.—Market generally dull, export demand being still found wanting, and buyers claim the advantage respecting any alteration in prices. Moderate supplies submitted to auction were only partially disposed of. The future delivery market remains steady but slow.

COCOA.—At auction this week 11,754 bags were offered, and, with scarcely any demand, these were virtually all bought in.

TEA.—Market steady for all the finer qualities, and which sold well, but rough picked and common parcels again proved slow, with rates showing weakness. Some 38,700 packages Indian and 17,500 packages Ceylon were auctioned.

RICE steady, with a fair inquiry. Rangoon bran dull at £13, to arrive. Beans and peas ruled quiet, and prices in favour of buyers.

SPICE.—Pepper dull, but sellers were quite steady in their demands. Fair black Singapore, spot, sold, 6¼d to 6⅜d, as to quality; ditto, May-July, 6⅜d to 6⅝d; July-September, 6¼d to 6½d; August-October, 6⅜d; Lampong, spot, sold, 7d; Aleppy, quoted 7¼d; Tellicherry, 8d; white Singapore, 11¼d; Muntok, 11⅜d. Zanzibar cloves, spot, 1s 5d. Pimento, sold, 5d. Flake tapioca, fair, on spot, 2¼d; ditto, July-September, steamer, 21s 6d; Penang seed pearl, ditto, 25s; small sago, 32s; sago flour, July-September, sold, 19s 6d. Farina, August-October, 26s. Desiccated coconut, fine cut, spot, sold, 67s 6d; and medium, 70s.

JUTE.—Prices steadily declined under pressure to sell, and reserve shown on the part of buyers as crop prospects are now more favourable. Native firsts assortment, actuals, June-July, steamer, sold from £48 to £45; subs, £43 to £40; new crop, actuals, August-September, £51 to £47; and lightning, actuals, August-September, £43; with old crop ditto, June-July, £34. Calcutta hessians and twills steady in value, but only limited support accorded.

(Continued on page 39.)

FREDRIKSSTAD PRIVATBANK.

Fredriksstad (Norway).

Paid-up Capital and Reserves: about £1,300,000.

The Bank's *Savings Bank Department* receives deposits at notice (at present at 5%) and for fixed periods at favourable rates. Interest allowed from date of deposit to date of withdrawal.

Attention is drawn to the present favourable exchange for purchase of Norwegian Crowns.

(Par value £1 = Crowns, 18·16).

Sterling bought at the best rate of the day.

Commercial Times.—Weekly Price Current.

The prices in the following list are revised with the assistance of an eminent firm in each department.

HEMP opened the week quietly, but became steadier. J grade, July-September, sold, £62 to £63; August-October, £62 to £62 10s and £63 10s; L, due steamer, £50. Fair New Zealand, dock, sold, £51. Italian firm in local markets, but there is no interest shown in the London centre. Russian largely nominal

SHELLAC.—Market disclosed slight irregularity, and trade moved quietly. Fair free T.N., standard, spot, sold, 650s; August, 690s to 680s and 685s, then 675s; October, 625s to 600s.

COPRA.—Market very quiet, and sales this week include F.M. Straits, August-October, London, sold, £47 10s to £48 5s; ditto to Antwerp and Rotterdam, quoted £46 10s; F.M. Straits, July-September, Marseilles, sold, £46 to £48. Palm kernels quiet, and July-September, sold, £33 to £32 15s and £32 5s.

MENTHOL.—Kob-Suzuki, spot, sellers, 30s; Yazawa, 27s; peppermint oil, 9s 6d and 9s respectively; aniseed, 4s; slab camphor, 6s; crude, 3s 9d; and crude, August-October, sold, 3s per lb.

EGG PRODUCTS dull. Liquid yolk, spot, sold, 70s up to 75s for prime quality; liquid whole egg, spot, sold, 70s per cwt. Dried yolk, spot, 9d; native dried whole egg, spot, 10d; spray, 1s 10d; and albumen, 4s 2d per lb.

RUBBER steady, though trade moved rather quietly. Plantation crepe, spot, sold, 1s 11d to 1s 11½d; July-September, 1s 11¼d to 1s 11½d; October-December, 2s 1⅝d to 2s 1¾d; January-June, 2s 3½d. Sheet, spot, sold, 1s 10¼d to 1s 10¾d; and fine hard Para, spot, 1s 11½d.

TALLOW.—Messrs Colchesters and Woolner write on 30th June as follows:—The tallow market has been quiet during the week, with prices 5s lower to-day. The home trade is still dormant. For export there has been some inquiry, but it has not led to much business so far. At auction to-day 1,099 casks tallow were offered, and 220 were sold. Quotations are: — Australian mutton: Fine, 75s; good to fair, 73s to 70s; dull to dark, 65s to 62s; hard, 75s. Australian beef: Fine, 75s; good to fair, 70s to 68s to 62s; dull to dark, 65s to 62s; sweet, 77s 6d. Present shipment from Australasia: Mutton, fair coloured, 48 degs. none; and mixed, 43½, c.i.f., London, 70s. The market letter is lower, tallow 3s, stuff 2s. Town tallow, 67s per cwt. Rough fat per 8 lbs, 8½d to 1s 4⅛d; melted stuff, 50s per cwt. Quotations are:—Town: 65s net cash, naked, ex works. Country: Frail casks, 63s; home melted, shipping casks, net f.o.b., good coloured, none; fair to dull, 67s to 64s. Bone fat: white, none; pale, 60s; benzine, 56s; melted stuff, 56s, f.o.b.

THE NATIONAL BANK OF SOUTH AFRICA, LIMITED.

(With which are Incorporated the Bank of Africa, Limited, Established 1879, the National Bank of the Orange River Colony, Limited, Established 1877, and the Natal Bank, Limited, Established 1854.)

Bankers to the Union Government in the Transvaal, the Orange Free State and Natal, and to the Imperial Government.

AUTHORISED CAPITAL .. .. **£4,000,000** | SUBSCRIBED AND PAID-UP CAPITAL **£2,965,000**
RESERVE FUND **£1,250,000**

Head Office:—PRETORIA. **LONDON OFFICES:—Circus Place, London Wall, E.C.2; 18, St. Swithin's Lane, E.C.4 and 25, Cockspur Street, S.W.1.** **NEW YORK OFFICE:—10, Wall Street.** **BOMBAY OFFICE:—Taj Buildings, Hornby Road.**
Also Branches at: ANTWERP (Belgium), JAMESTOWN (St. Helena), PORT LOUIS (Mauritius).
ROTTERDAM:—In Offices of Rotterdamsche Bankvereeniging. Address: Boompjes, Rotterdam. **AMSTERDAM:—In Offices of Rotterdamsche Bankvereeniging.** Address: Rokin, Amsterdam.
FRANCE.—This Bank is affiliated with Messrs Cox & Coy. (France), Ltd., with Offices at Algiers, Amiens, Boulogne, Cologne, Havre, Lyons, Marseilles, Paris and Rouen. Agents in British West Africa, The Belgian Congo, Madagascar, etc., and the principal Cities of the World.

Report of the Directors to be presented to Shareholders at the Ordinary General Meeting to be held at Pretoria on the 23rd June, 1920.

The Directors beg to submit the Balance Sheet of the Bank for the year ended 31st March, 1920. After making full provision for bad and doubtful debts and applying £50,000 in reduction of Bank Premises Account, the net profits for the year are £538,683 12s 9d, inclusive of the balance of £23,206 9s 11d brought forward from 31st March, 1919. The Bank's investments stand at or under the present market prices.

They recommend that the profits be apportioned as follows:—

To Dividend of 7 per cent. (of which the Interim Dividend paid for the six months ended 30th September, 1919, absorbed £102,058 11s 1d), plus a bonus of 1 per cent.	£235,483 11 1
,, Reserve Fund (raising it to £1,250,000)	200,000 0 0
,, Pension Fund	60,000 0 0
,, Balance to be carried forward	43,200 1 8
	£538,683 12 9

Branches.—103 New Branches have been opened during the year, namely, 1 in Basutoland, 1 in Belgium, 1 in India, 1 in Mauritius, 1 in Portuguese East Africa, 2 in Rhodesia, 1 in St. Helena, 3 in South West Protectorate, 1 in Swaziland and 91 in the Union of South Africa.

Directors.—You will be asked to confirm the appointments by the Board of Mr J. R. Leisk, C.M.G., and Mr E. C. Reynolds as Directors of the Bank.

In terms of the Trust Deed, the Hon. Hugh Crawford and Messrs J. B. Taylor and J. Emrys Evans, C.M.G., retire by rotation, but, being eligible, offer themselves for re-election.

The Directors, in virtue of the power conferred upon them by the Articles of Association, have appointed Mr Edward Charles Reynolds to be Managing Director in addition to his position of General Manager.

Auditors.—You will be asked to fix the remuneration for the past audit, and to appoint Auditors for the ensuing year. Mr Robert Baikie and Messrs Dougall, Lance and Webber offer themselves for re-appointment.

Pretoria,
21st May, 1920.

H. CRAWFORD, *Chairman.*
EMRYS EVANS, *Vice-Chairman.*
C. P. MATHEWS, *Secretary.*

£1,000,000		£322,000

ISSUE AT PAR OF

200,000 8 per cent. Cumulative Preference Shares

of £1 each, payable as follows:

2s. per Share on Application; 8s. per Share on Allotment; 10s. per Share on the 1st day of September, 1920.
Payment may be made in full on Allotment.

The Preference Shares will carry the right to a fixed cumulative preferential dividend at the rate of 8 per cent. per annum on the capital for the time being paid up or credited as paid up thereon and will rank both as regards dividend and capital in priority to all other shares, but without any further right to participate in profits or assets. The fixed dividend on the Preference Shares will be payable quarterly on the 1st January, April, July, and October in each year, the first dividend on the shares now issued being payable on the 1st October, 1920, and calculated on the amounts paid up from the date of payment.

DIRECTORS.

GEORGE POWELL HARGREAVES, The Chesnuts, Hessle, E. Yorks (Chairman and Managing Director).

SECRETARY AND REGISTERED OFFICES.

JOHN GUY HEWITT, "Gipsyville," Hull.

ABRIDGED PROSPECTUS.

The Company was incorporated on 8th March, 1906, to acquire the business of Hargreaves Bros. and Co., Makers of Blue and Black Lead, established in Hull in the year 1868. The business of John Johnson and Co., Ltd., St. Anne's Works, Liverpool, manufacturers of Blue, Black Lead, Floor Polish, Furniture Polish and Metal Polish, founded in 1818, had been taken over during the previous year, and was included in the sale to the Company.

Since 1906 some 20 other businesses have been bought outright, while in several others a controlling interest has been purchased. Many of these have been continued under their old names as separate Companies, and are operated in harmony with the policy of this Company. They are an important source of revenue, and have in many ways strengthened the position of Hargreaves Bros. & Co., Ltd. Amongst the Associated Companies referred to are the following:—

W. G. Nixey, Ltd., Black Lead Makers to H.M. the King, London.

Day and Martin, Ltd., Stratford.	**Zetterquist & Harvey, Ltd., London.**
Radium Polishes, Ltd., Broadheath Manchester.	**Mitre Polish Co., Ltd., Liverpool.**
Aladdin Polish Co., Ltd., London.	**Midas Polishes, Ltd., Liverpool.**
Zog, Ltd., London	**King, Sons & Co., Ltd., Bristol.**
Hargreaves (Canada), Ltd., Toronto.	**Sultana, Ltd., Montreal.**

The specialities of the Company and its Associated Companies consist principally of Laundry Blue, Black Lead, and Household Polishes of every kind. It owns a large number of Trade Marks, many of which have become household words and are of great value, e.g.:—

GIPSY BLACK LEAD,

Linoleo Floor Polish.	**Zog.**	**Nixey's Black Lead.**
Glosso Metal Polish.	**Pyn-ka.**	**Aladdin Metal Polish.**
Tiger Boot Polish.	**Ocean Blue.**	**Nixey's Boot Polish.**

Goods under these and many other brands are not only sold throughout the British Isles, but are exported in considerable quantities to almost every part of the civilised world. Branch Offices or agencies have been established in the following Colonial and Foreign Cities:—

Toronto, Ontario.	Johannesburg.	Alexandria,
Montreal, P. Q.	Paris.	Bombay.
Vancouver, B.C.	Brussels.	New York.
Melbourne, Victoria.	Rotterdam.	Beunos Aires.
Sydney, N.S.W.	Copenhagen.	San Paulo.
Auckland, N.Z.	Madrid.	Hong Kong.
Cape Town.	Constantinople.	

The books of the Company have been examined by Messrs. Deloitte, Plender, Griffiths & Co., and by Messrs. Buckley & Hall, of Hull (the latter firm having acted as Auditors to the Company since its incorporation). The joint Certificate of these firms is as follows:—

To the Chairman and Directors of
HARGREAVES BROS. & Co., LTD., "Gipsyville," Hull.
21st June, 1920.

Gentlemen,—We have examined the books and the audited accounts of your Company for the five years ended 31st December, 1919, and we find that the Assets and Liabilities at 31st December, 1919, in accordance with the Balance Sheet of that date, but after making provision for the liability to Excess Profits Duty and for dividends earned to that date and subsequently paid, were as follows:—

Freehold Land and Buildings	£116,279
Fixed and Loose Plant, Machinery and Equipment	45,246
Investments in, and Loans to, Associated Companies	178,047
Stocks in Trade	118,586
Book Debts, Payment in advance, &c.	39 561
Cash	2,128
	£499,847
Deduct Loans, Advances, &c., Trade and other Creditors, and provision for Excess Profits Duty and for dividends subsequently declared	174,102
Excess of Assets over Trade and other Liabilities	£325,745

No item appears in the Company's Balance Sheet in respect of goodwill.

We find that the profits for the five years ended 31st December, 1919, after providing for Directors' Remuneration and Depreciation of Plant, Machinery and Equipment, but before charging Income Tax, and Interest on Loans and Bank Overdrafts, were as follows:—

Year ended 31st December.	Profits before charging Excess Profits Duty.	Excess Profits Duty.	Profits after charging Excess Profits Duty.
1915	£14,262	£4,215	£10,047
1916	20,392	4,702	15,690
1917	17,559	1,434	16,125
1918	20,714	3,354	17,360
1919	54,041	14,500 (estimated)	39,541

We are, Yours faithfully,
DELOITTE, PLENDER, GRIFFITHS & CO.
BUCKLEY & HALL.

It will be observed that according to the Accountants' certificate there was an excess of Assets over Liabilities at 31st December, 1919, after providing for all dividends earned to that date but subsequently distributed, of ... £325,745 0 0
to which will fall to be added the anticipated
proceeds of the Share Capital now to be issued £200,000 0 0
Less Stamp Duty additional Authorised Capital, 1920 ... £7,500 0 0
And Expenses of present issue, say 7,500 0 0
15,000 0 0
185,000 0 0
making, on the above basis, a total Excess of £510,745 0 0

The Freehold Land and Buildings and the Plant, Machinery, &c., stand in the books at a figure which, in the opinion of the Directors, represents less than their present worth; and the same remark applies to the Investments in Associated Companies.

The Stocks in Trade were valued at prices which in no case exceeded cost. The market value of such Stocks at the date of the Balance Sheet was **materially in excess of the cost.**

Without taking credit, therefore, for any amount by which the real value of the assets exceeds the total at which they appear in the Company's books, **and also without taking anything into account in respect of the Goodwill of the Company's business, which is of very considerable value,** the excess of Assets over Liabilities would be sufficient to cover the Cumulative Preference Capital including the shares subscribed in response to this offer, more than one and a half times over.

The financial policy of the Company has been a conservative one. For a number of years the whole of the profits in excess of the amount required to pay the fixed dividends on the Preference Capital were retained in the business; and when subsequently dividend distributions on the Ordinary Capital were made, substantial sums continued to be allocated out of the profits for the purpose of developing the business. A portion of the reserve created by this and other means has now been capitalised and a distribution made in the form of Deferred Ordinary Shares, thus strengthening the security for the Preference Capital.

The Directors who are all Experts in one or other Branch of the business devote the whole of their time to the interest of Company and its Associated Companies.

The object of the present issue is to pay off existing loans, and provide funds for the further extension of the Company's business. Additional working Capital is necessitated by the continually increasing demand for the Company's specialities and the present unique opportunity for expansion in overseas markets.

The Directors anticipate that the Trade Profit for 1920 will, by reason of the increase of business since the beginning of the year, and by the employment of the additional Capital it is now intended to raise, exceed that of any previous year.

Copies of the full Prospectus and forms of application may be obtained from the Bankers, Solicitors and Auditors of the Company; the Brokers to the Company; the Secretary at the Company's Registered Offices, "Gipsyville," Hull; and the Offices of W. G. Nixey, Ltd., 12, Soho Square, London, W.1.

THE MONEY MARKET.

MONEY was extremely plentiful in the early part of the week, but as the huge mass of bookkeeping credit created at the end of the half-year was rapidly extinguished by repayments to the Bank of England, the old conditions reasserted themselves, and balances were less easy to obtain at low rates. Discount business was extremely quiet, and the general uncertainty of the position, offsetting the scarcity of bills, left rates steady. The further expansion of currency notes was generally regarded as being due to withdrawals against contributions of gold by the other banks to the Bank of England's stock, and it is hoped that an end will soon come to this somewhat questionable process, which results in making the currency position look worse than it need.

* * * *

The Bank return showed increases of £2,856,000 in the stock of gold, £2,686,000 in the note "circulation" (owing to the transfer of £2,700,000 to the Bradbury reserve), and £170,000 in the Reserve. Government securities declined by nearly 37¾ millions, and Other by 19¼, marking the cancelling of the credit created for half-yearly purposes. There was thus a decrease of 56¾ millions in the total deposits, Other declining by nearly 59, while Public rose by 2. There was a further addition of £2,766,000 to the circulation of Currency Notes, which now stands at £360,122,200, the highest total yet recorded. The reserve of Bank of England notes was raised by £2,700,000 to £16,100,000, so that the fiduciary issue works out at £315,522,200, or £5,077,800 below the maximum.

* * * *

Political sentiment has played a large part in exchange fluctuations this week, and the value of the currencies of Continental countries has moved up and down in sympathy with the more or less favourable trend of events at Spa. Some dealers, too, are inclined to ascribe the movements in French exchange to the influences arising out of the rumoured sale of the French Tobacco Monopoly to the U.S.A. and another foreign Power. As a matter of fact, French cheques were in demand on Monday and Tuesday, but after touching 45f 95c to the £1 francs depreciated, and the Paris rate is now back to 46f 80c. The Brussels rate has also weakened sensibly, and the quotation mid-day yesterday was 43f 70c. The New York cable transfer rate is dull and hesitating, and the price of both sterling and francs in America continues to be affected by the arrangements for the repayment of the Anglo-French Loan in New York. The present quotation on London is $3.95¼. Dutch exchange has also moved against London, but there are sufficient buyers of sterling on the Amsterdam market to keep the rate up to 11 fl 15c. Among the Scandinavian group, the Stockholm Bourse is the only weak spot for our currency, and the rate has now dropped back to 17k.85. Berlin exchange is feeling the effects of the uncertain political situation, and marks have depreciated to 151 for £1. Italian lire are also a dull market. The Eastern exchanges have, as usual, responded to the movements in the price of silver; Hong Kong dollars and Shanghai taels are quoted at 3s 8d and 5s 1d respectively, but the Indian rupee is a little higher at 1s 10d; Japanese yen are not so firm at 2s 7d.

EVENTS OF THE WEEK.

JULY 3RD.—Further improvements in foreign exchanges.

JULY 5TH.—Allies and Germans in conference at Spa. Control of British livestock and meat ended. Slesvig restored to Denmark. Memorial to W. T. Stead unveiled.

JULY 6TH.—Governor Cox, of Ohio, chosen by Democrats as candidate for the Presidency of United States. Duty on champagne to be reduced to 33⅓ per cent. New demands by miners.

JULY 7TH.—Government defeated in House of Lords on economy in National Expenditure. Finance Bill in Commons. Inaugural meeting of National Association of Merchants and Manufacturers.

JULY 8TH.—Debate on General Dyer's case in Commons. Polish army retires before Russians. Miners, in conference, refuse to operate Ministry of Mines Bill. Silver higher.

THE CLOTH AND THE COAT.

A HOPEFUL sign of a return to economic sanity is the seriousness with which the country is now discussing the question of the weight of the burden of taxation, and of the extent to which economies might and must be carried out by the Government. In the House of Lords last Wednesday, the case for retrenchment was very forcibly put by Lord Midleton, Lord Inchcape, and Lord Buckmaster. Lord Midleton urged that what was really handicapping industry at this moment was the immense pressure of ordinary taxation, and pointed out that within five miles of that House there were 77,000 Civil Servants as compared with 30,000 before the war. Lord Inchcape, in a strongly worded speech, urged that short work should be made of the new war-born bureaucracy, that we ought to recognise that the sense of prosperity engendered by our borrowing and spending lavishly for the war was never anything but a mere hallucination, and that the salvation

of the country and its commerce depended on a rigid and relentless economy. After some amusing and effective criticism of the new Ministry of Transport and its head, and of the Government's disastrous handling of the coal industry and of the housing business, Lord Inchcape said that he had complete confidence in the recuperative capacity of these islands, but unless we got the industries of the country free from the sterilising and damaging effects of bureaucratic control and interference we would never recover that prosperity which enabled us to forge ahead and to build up the wealth of the people, which was the wealth of the country, and which provided us with the Empire's first line of defence—and that was solvency.* An able but unconvincing reply was made by the Lord Chancellor, who began with a spirited and welcome defence of the much-abused Mr Chamberlain, describing him as having, during the last twelve months, been "always resisting proposals for expenditure made by his colleagues in the Cabinet." Lord Birkenhead had, of course, some ground for his contention that the staffs of Government offices were still necessarily increased by the effect of work left by the war which had to be done now. But he would not even have hoodwinked an average jury when he "marvelled that anybody with Lord Midleton's experience should believe that any Government was either so wicked or so stupid as to want to increase the staff of the Navy or to retain a larger staff than was necessary." No one accuses the Government of any such wickedness or stupidity, but there is a general impression in the public mind that the Government has no time to go with fulness into this matter, and that, especially in the new or war-swollen departments, a large number of officials are still kept and paid whose work might well be dispensed with, and that something like the Commission suggested by Lord Midleton to investigate this question might do a very useful work. But though it is certainly highly desirable that redundant officials should be dispensed with, it need hardly be said that this is a comparatively small item in the bill, and that a revision of our whole spending policy is urgently called for, if it be true, as is now urged by high authority, that the nation is being taxed beyond the point that it can bear with safety.

Opportunely enough the Government has this week issued in a White Paper (Cmd. 802, price 1d) a Memorandum on present and pre-war expenditure, and particulars of Government staffs at certain dates. On the whole, it would seem from these figures that at least in the old departments the cost of the increased work now being done by our officials is by no means excessive. For example, the Revenue Departments, Customs and Excise, Inland Revenue, and Post Office, which cost in the original pre-war estimates nearly £31,000,000, are, according to the 1920-1 estimates, to cost £60,000,000, an increase of less than 100 per cent. In view of the much greater revenue collected by our tax gatherers, and the new and complicated taxes which the war has called into being, and in view, also, of the increased business of the Post Office, including the payment of war pensions and allowances, handling the Post Office issues of War Loan and all the troublesome and detailed work that the war savings movement has imposed, with the increased cost of carriage and engineering, these figures would seem to show that the old-fashioned Government departments are still being worked with a keen eye to economy. Probably there are not many businesses in the country which can show that they are doing a very much greater amount of work than before the war with an increase in charges of less than the extent to which our currency has been debased. But, as has been said, the question is a very much larger one than the actual cost of our officials. What we want to know is whether the Government is spending more than the nation can afford, and we want to know this quickly, because if the Government is doing so, the effects of this policy upon the future of our industry, and the prosperity of the country as a whole, is certain to be disastrous, though it may take some time before these evil effects check themselves by the decline in revenue which will finally compel economy, in spite even of the present Government's love of prodigality. An interesting suggestion to secure this end is made in a letter from the Federation of British Industries, addressed to the Prime Minister on the subject of Government economy. Several of the points put forward by the Federation are open to question—for example, its assertion that the raising of loans for the funding of short-time obligations reduces the country's capital fund. But they propose "that the Government should appoint an independent committee composed of leading financial and economic experts, together with men of wide business experience, and that this committee should be charged with the investigation of the national income, and asked to name a sum which in their opinion it is safe to raise by taxation without so diminishing the national income as to imperil the future of industry and commerce." We certainly need more definite information as to what the present income of the nation really is. Even when we have got this information it will be a very difficult question to settle what proportion of the income can safely be handed over to be spent by the Government. But in view of the loose talk that is now frequently indulged in on this question, it seems highly desirable we should have an authoritative investigation which could at least tell us, with some approach to accuracy, how the nation's present income compares with the pre-war estimates, and can also investigate the question, which seems to need elucidation, as to how far money taken by the Government must be treated as a gross deduction from the nation's income as a whole. It seems to be generally assumed that whatever the Government takes is gone. We lately ventured to question this assumption, at least with regard to the debt charge, when it was expressed or implied by Mr McKenna.* Now Lord Midleton has plumped for it by saying that "£130,000,000 more has been taken out of the pockets of the taxpayers in the last three months, and as a result, the capacity of buyers in this country has been reduced by that sum." Is this altogether true?

* *Times*, July 8th.

OUR INDEX NUMBER.

THE movement in wholesale prices during June has resulted in a substantial decline in our Index Number, the total of which now stands at 7847, or 352 points lower than at the end of May, while the percentage figure has fallen from 372.7 to 356.7. This large fall follows smaller declines in each of the two previous months, and brings the total almost down to the end of January level. But it is still 26 per cent. higher than at the cessation of hostilities, as may be seen from the table below, which shows the monthly movements since the Armistice, the figure at that date being taken as 100 :—

1918—November	100	1919—September	106
December	98	October	109
1919—January	94	November	112
February	93	December	118
March	92	1920—January	125
April	93	February	131
May	96	March	134
June	99	April	132
July	104	May	132
August	105	June	126

It will be observed that the movement during the past three months has been reversed as compared with the

Primary foodstuffs alone show an increase for the month of June, which is mainly due to a rise in home-grown oats. In the second group of foodstuffs the principal decline is shown by tea, supplies being still in excess of trade requirements, but according to the report of the Tea Brokers' Association of London the lower scale of prices has not apparently so far resulted in appreciably widening the retail outlet. The best quality tea is selling well, but the margin between fine and common kinds is steadily widening, and stocks of the latter are increasing. Coffee is also a little lower, and butter shows a considerable drop.

With the exception of flax, which has risen during the month, textiles have moved down considerably. With regard to the cotton market, Messrs Robert Barbour and Brother, Limited, report as follows :—" The present stagnation appears to emanate more from political and financial causes than from an over supply of goods. All reports seem to show that stocks are low in India and not too high in China, and there is still in some quarters a confident feeling that buying, especially for India, provided the present favourable monsoon prospects materialise, cannot be much longer delayed, and revival in that market would be almost sure to bring in business from other centres. In the meantime, everyone is adopting a waiting attitude, and in no hurry to undertake further commitments. In spite of the downward trend of cotton, combined with the absence of business, there is nothing in the nature of a slump, and it is not a little surprising that yarns and cloth maintain their quotations to the extent they have done." Wool prices are still inclined to fall, owing to the smaller demand for the raw material, both on home and foreign account. Silk has again fallen heavily, and is now at less than half the quotations recorded three months ago. Jute and hemp are also lower.

In the minerals group, iron bars are quoted higher, but the minor metals have declined again, a substantial fall being shown by lead. In the miscellaneous section, the principal decline occurs under oilseeds, but oils, tallow, and rubber have also moved downward.

We may conclude with a comparative table of prices at the close of the first half of each of the past five years and at June 30, 1914 :—

Prices at End of June Half-Year.

As compared with 1919, the most important movement is the advance in iron and steel prices. Tin shows a striking decline, while rubber is well below the pre-war level.

OVERSEAS TRADE IN JUNE.

June contained one more working day, on paper, than May, and probably more in actual practice, because of the elasticity of the Whitsuntide holiday in certain quarters. Therefore a decline of nearly £3 millions in British exports in June, as compared with May, is somewhat disappointing. Imports at the same time rose by over £4 millions, and re-exports were a shade lower. Presumably some effect must have been produced upon the trade figures by the violent exchange movements recently witnessed. Imports at £170.5 millions and total exports at £136.5 millions leave the import excess on the published figures at £34 millions for June as against less than £26 millions for June. Nevertheless, in spite of this slight set-back, current estimates of invisible exports, to which we have frequently referred, show that in all probability June gave us a comfortable margin on the right side in our international trade. The general financial position, however, still demands unremitting effort in the direction of sparing home consumption and increased production. A summary of the value figures for June and for the first six months of 1920 and 1919 reads as follows :—

Month of June.

	1919.	1920.	Increase or Decrease in June, 1920.	
	£	£	£	%
Imports	122,874,390	170,491,230	+ 47,616,840	+ 37·0
British exports	64,562,465	116,352,350	+ 51,789,885	+ 80·0
Re-exports	11,963,960	20,123,928	+ 8,159,968	+ 68·2
Total exports	76,526,425	136,476,278	+ 59,949853	+ 78·1
Excess of imports over total exports	46,347,975	34,014,952	— 12,333,023	— 26·6

FIRST HALF-YEAR.

	1919.	1920.	Inc. or Dec. in 1920.	
	£	£	£	%
Imports	716,787,426	1.033,334,684	+316.547,258	+ 44·0
British exports	334,756,132	637,466,884	+302,710,752	+ 90·3
Re-exports	55,434,295	135,841,048	+ 80,456,753	+ 145·1
Total exports	390,190,427	773,357,932	+383.167,505	+ 98·1
Excess of imports over total exports	326,596,999	259.956,752	— 66,640.247	— 20·4

For the half-year the increase in imports is very formidable, and if British exports had not shown a substantial expansion during the last two months the improvement shown in 1920 to date would have been unsatisfactorily meagre. In reading these figures, also, we have to remember that an important (but unascertainable) proportion of our export trade is done with war-worn countries on terms of long credit, the effect on the exchanges being thereby impaired and delayed.

Still, looking at the half-year's figures, we find cotton playing a predominant part on both sides of the account. Imports of raw cotton show a value increase of no less than £108.9 millions, and exports of cotton goods a value increase of over £91 millions. The quantity and value figures of raw cotton imports read as follows :—

FIRST SIX MONTHS.

1919.		1920.	
Centals.	£	Centals.	£
8,204,195 ..	75,012,160 ..	12,758,131 ..	182,358,806

Similar figures for cotton yarn and piece goods exports are as follows :—

FIRST SIX MONTHS.

	1919.		1920.	
	Lbs.	£	Lbs.	£
Yarn	78,117,000	16,319,061	78.614,700	23,912,824
	Yards.		Yards.	
Piece goods	1,477,944,800	76,609,913	2.396,798,000	153,347,097

In quantity yarn exports were little better than stationary, while price advances also play a big part in the piece goods value figures. Wool imports in the half-year declined by £4 millions, but woollen exports rose by £28 millions. Coal exports in the half-year, though nearly £20 millions higher in value, were actually more than 4,000,000 tons less than in the first half of 1919. Of the total increase of £302 millions shown in the first table for British exports in the half-year, "Articles wholly or mainly manufactured," account for £250 millions. Apart from cotton and wool, already mentioned, the chief contributors to this aggregate increase were "iron and steel and manufactures thereof" (+£30.3 millions), machinery (+£11.9 millions), textile manufactures other than wool, cotton, and silk (+£12.5 millions), chemicals, drugs, dyes, and colours (+£11.9 millions), and vehicles (+£14.3 millions). Gold and silver imports and exports in the half-year were as follows :—

	Imports.		Exports.
	£		£
Gold	22,839,839	....	42,685,926
Silver	4,797,987	....	5,528,171

The June figures show, as compared with a year ago, a rise of £4.4 millions in cotton imports and of £17.3 millions in exports of cotton yarn and manufactures. Other important changes may be seen from the tables appended to this article. The features of the account of stocks of dutiable commodities in bonded warehouses are the larger supplies of wine, tobacco, tea, and home-made spirits. Wine stocks are 14,220,000 gallons against 8,683,000 a year ago, manufactured tobacco 329,601,000 lbs against 202,753,000 lbs, tea 224,102,000 lbs against 161,561,000 lbs, and home-made spirits 128,349,000 proof gallons against 117,697,000. Sugar supplies are a trifle better than at June 30, 1919. The six months' figures of shipping (foreign trade) compare as follows with those for the first six months of 1919 and 1913 :—

	Entered with Cargoes. Tons.		Cleared with Cargoes. Tons.
1920	16,857,884	....	18,206.626
1919	12,565.000	....	16,362.056
1913	23,133,126	....	32,896.245

The 1920 figures are still a very long way below 1913. The following tables classify imports and exports for June and the first half of 1920 and 1919 under a large number of heads :—

IMPORTS (Value C.I.F.)

	Month Ended June 30.		Six Months Ended June 30.	
	1919.	1920.	1919.	1920.

THE GOVERNMENT AND RAW MATERIALS.

The trading accounts of the various raw materials schemes of the War Office and Ministry of Munitions up to March 31, 1919 (Cmd. 788), show an excess of expenditure over receipts to that date of £60,785,468. The accounts for the year 1919-20, however, which are subject to audit, show expenditure to date of £100,465,200, and receipts of £179,412,640, so that the net result of the schemes from their inception up to March 31st last is an excess of receipts over expenditure amounting to £18,161,971. But, as Sir Arthur Goldfinch, Director-General of Raw Materials, points out in an exhaustive memorandum included in the report, the profits shown are only a very small part of the economic benefits obtained from the Government's operations, some idea of the extent of which may be gathered from the following list of purchases from the inception of control until March 31, 1919, in each case:—Home wool, 170,000 tons; colonial and foreign wool, over one million tons; tops, over 16 million lbs; East India kips, 19 millions; English sole leather, 48½ million lbs; American sole leather, 23 million lbs; American upper leather, 82 million feet; raw jute, 315,000 tons. The total purchases involved an expenditure of £277 millions, of which no less than £184 millions was for colonial wool alone, while the profits amounted to £38¾ millions, of which £25½ millions was realised from colonial wool, subject to rebates and profit-sharing arrangements. The total cash benefits accruing to the Exchequer to March 31, 1919, after making various adjustments, are £34¾ millions. In view of the large amounts involved, it is satisfactory to find that the percentage of administration expenses to total sales is exceptionally small, amounting in the case of colonial wool to 0.2 per cent., of jute to 0.12 per cent., of kips and raw hides to 0.48 per cent., and in the case of all materials to 0.33 per cent. If expenses are compared with the total turnover, the ratio works out at 0.147 per cent.

The accounts do not extend beyond March 31, 1919, in detail, but the report touches on the operations of the raw materials section in the past financial year, and states that:—"It was decided, after full consideration, that the Government stocks of raw materials should in no case be sold during the transition period at any price higher than the lowest estimate of replacement value, and that where it seemed to be necessary for the maintenance of employment and the re-establishment of trade on a sound basis, issues to manufacturers should be made at still lower prices. In pursuance of this policy, our stocks in this country of jute and Manila hemp were realised at the lowest point touched during a temporary slump after the Armistice, and in flax and other commodities, the issue prices, if raised at all, moved very slowly behind the open market, which in general advanced sharply in proportion as controls were relaxed. There is room for legitimate difference of opinion as to whether the attempt to keep down prices was not carried too far. The revival of trade certainly took place, and unemployment was much less than expected, but the evidence clearly points to manufacturers and traders having reserved to themselves, in the shape of abnormal increases of profit, the greater part of, if not all, the benefit of the cheap prices at which Government stocks of raw materials were sold. It must go on record, however, that in this matter, at least, the Government used every means in its power, so long as the issue was in doubt, to prevent, or to moderate, the inflation of prices, which has, unfortunately, since become the most conspicuous feature of the trading situation. After the middle months of 1919, this policy could no longer be pursued with any prospect of success, and the Department has since fixed the selling prices on commercial lines, obtaining the full market value so far as consistent with the rapid realisation of its stocks." During the financial year ending March 31, 1920, the following were the cash receipts against sales of raw materials:—

	£
Home wool.....	7,640,000
Colonial wool.....	144,166,000
Kips and raw hides	9,198,830
Tanning materials	220,990
Leather	7,834,200
Flax and flax seed	4,166,000
Raw jute.....	2,772,000
Manila hemp.....	1,190,600
Cotton and cotton fabric.....	1,294,220
Chemicals and drugs	609,000
Food containers	321,000
	179,412,640

The stocks brought forward into the present financial year consisted almost exclusively of Australian and New Zealand wool, East Indian kips, and certain grades of leather. All the trades dealt with in the report have long since been freed from control, and importation of their raw materials is entirely free, the Department, as seller, being, therefore, in exactly the same position as any ordinary dealer.

Business Notes.

The Railway Deficit.—The financial results of working the railways in April and May show a net Government liability of about 3½ millions for each month. For April revenue amounted to £18,773,900 and expenditure to £18,531,200. The Government guarantee was £3,702,000, making the net liability £3,541,600. In May revenue brought in £19,650,300, and expenditure was £19,014,300. The guarantee was £3,868,000, and the liability £3,351,600. The Ministry of Transport has announced that it is now estimated that the financial result of working the British railways (including Ireland) will show a deficiency, as from April 1, 1920, at the rate of £54½ millions per annum, which includes increases of £4,400,000 in salaries and wages which came into force on July 1st under the provisions of the sliding scale. The new railway statistics for the four weeks ended April 25th, which covered the Easter holiday, show a decline of 3,027,000 tons, or 10.8 per cent. in the total tonnage carried in Great Britain. The average length of haul remains about the same, and the average train load shows a decrease of 3.25 tons, owing partly to the decreased proportion of coal and coke carried. The receipts (less cost of collection and delivery) per ton mile for the controlled railways in Great Britain work out at 1.576d, as compared with 1.529d for the preceding four weeks.

Home Railway Dividend Dates. — Publication of the dates upon which the home railway companies will announce their dividends has failed to rouse the market for the stocks. Fresh uncertainties as regards the grouping system and increased freight charges proposed by the Government are causing the investor to leave the stocks alone. For reference sake, however, this table shows the dates upon which the dividends will be announced, and

we add the yields available at present prices on the basis of the last year's dividends :—

Company.	Dividend Date.	A Year Ago.	Price.	Yield. £ s d
Lancs. and Yorks	July 15	3¼	60½	7 8 9
Midland	„ 16	3¼	52	9 1 8
Great Eastern	„ 20	1	32¼	8 10 7
South-Western	„ 22	4	67	8 19 2
Great Northern	„ 23	2¾ (for year)	30	9 3 4
North-Eastern	„ 23	6½	86¾	8 12 10
Brighton	„ 28	2½	57	9 4 2
North-Western	„ 30	5½	83	9 0 8
Great Western	„ 30	5	79	9 3 6

Calculations in the final column take no account of accrued dividend in current prices. The Underground companies' results are little criterion of what the other lines may do, but Stock Exchange estimates look for repetition of the amounts set out in the third column of the table, declared this time last year.

The Underground Dividends.—The Underground dividends have been announced this week, and do not make very cheerful reading, being in every instance lower than a year ago. The dividends on the Underground income bonds and the London General ordinary are passed altogether :—

	Interim Dividends. 1917.	1918.	1919.	1920.
	Rate per Cent. per Annum.			
City and South London, Ord.	1½	1½	2	½
London Electric, Ord.	1½	1½	2	¼
Metropolitan District, 2nd Pref.	3	3	5	2½
Underground Electric Railways of London, Income Bonds	4	4	6	nil
Central London	3½	4	4	½
London General Omnibus	8	.. ..	8	nil

The Underground Electric Railways Company of London states that interest on the 6 per cent. first cumulative income debenture stock will be paid on September 1st next at 3 per cent., less income-tax. Subject to final audit, the profits for the half-year ended June 30, 1920, after paying the full interest on the 6 per cent. first cumulative income debenture stock for such half-year, amount to £42. This does not allow of any payment on the 6 per cent. income bonds, and the amount of £42, together with the amount of £22,938 brought forward from the previous half-year, has been carried to the special reserve for equalisation of interest.

Bank Dividends.—Most of the midsummer interim dividends of the leading joint-stock banks have been announced this week, and few changes are shown as compared with last year. The dividends for a number of years are shown below :—

	Per Cent. per Annum. 1913	1914	1915	1916	1917	1918	1919	1920
Bank of Liverpool and Martin's	16*	16*	16*	16*	16*	16*	16	16

Union Discount	12	13	13	13	13	13	14	14

* Final dividend. † On old capital.

Amongst the banks the only change is shown by Barclays. The interim dividend of 14 per cent. is the first distribution on the "B" shares in their new form, and is equivalent to 21 per cent. on the former "B" shares. For at the end of last year the "B" shares of £2 each with £1 paid were converted into fully-paid £1 shares, shareholders retaining three-fourths of their holding, the balance being used for the acquisition of shares in the British Linen Bank and in the Union Bank of Manchester, so that a former holding of "B" shares was increased by 50 per cent. The past half-year has no doubt again been a good one for the banks so far as gross profits are concerned, for the demand for accommodation has been heavy in spite of high rates. But there has been no slackening in the rise in expenses and in investment depreciation, the decline in Government securities and in some of the War Loans, which are taken in some balance-sheets at cost, having been pronounced. It is also doubtful whether deposits have been increasing at the same rate as in recent years, when Government expenditure was on a much larger scale. The first statement to be issued, namely, that of Williams Deacon's Bank, shows deposits of £37,839,800, as against £37,001,400 at the end of 1919. Alexander's Discount Company raises the rate from 13 to 14. The balance-sheet, the first to be issued by the discount houses, shows bills discounted at £17,781,000, as against £12,233,800 a year ago. Bills rediscounted have risen from £925,750 to £2,430,800. Deposits, including profit and loss balance, are £2,041,000 higher at £15,966,800.

Empire Cotton Growing.—One of the chief recommendations contained in the report of the Empire Cotton Growing Committee was that the Lancashire industry should agree to a voluntary levy of 6d a bale on all imported cotton, the money raised being for the purpose of carrying out the extension proposals of the Committee. The suggestion was considered by the leading organisations in Lancashire, and it was decided unanimously to agree to the recommendation. It is estimated that the levy will produce about £100,000 per annum. Recently representations have been made to the Government, writes our Manchester correspondent, in favour of a similar amount being granted by his Majesty's Treasury. This week Sir Robert Horne, the President of the Board of Trade, has informed Sir Henry Birchenough, chairman of the Empire Cotton Growing Committee, that the Government is prepared to recommend to Parliament a vote of £50,000 a year, for the next five years, to enable the Empire Cotton Growing Committee to carry out its projects. This decision has been received in Lancashire with satisfaction, but there is some disappointment that the Government cannot see its way to make a grant equal to the amount raised by the voluntary levy. It is realised, however, that if the cotton industry is to be specially favoured other trades will make demands upon the Government, and naturally the Treasury has to exercise a policy of caution. Nothing has recently been heard in Lancashire of the scheme for growing cotton in some part of the British Empire on a commercial basis, and there is no probability of such a proposal being successful unless the trade is willing to provide some millions of money.

American Cotton Crop.—Our Manchester correspondent writes :—At the end of last week the Agricultural Bureau of the United States Government published important reports relating to the cotton crop for the season 1920-21. It was stated that on June 25th the condition of the growth was 70.7 per cent., against 62.4 per cent. on May 25th and 70 per cent. in June last year. The improvement in the condition since a month ago has been very marked, and for the time of the year is a record. The Bureau also published an estimate of the acreage for next

season, the amount given being 35,504,000 acres, as compared with the revised forecast of twelve months ago of 35,135,000 acres. The two reports indicate a yield of about 11,500,000 bales, not including linters, and if linters are added there seems to be every promise of a growth of over 12,000,000 bales. The crop for the season which ends this month should be about 11,800,000 bales. It is rather difficult at a time like the present, when the industrial outlook is so uncertain, to estimate the consumption of American cotton during the next twelve months, but leading authorities forecast the requirements of users at about 13,500,000 bales. It will, therefore, be noticed that consumption is still larger than supply. At the beginning of this week prices in Liverpool and New York only gave way slightly in face of the 'bearish" information from official sources, and since then the decline has been regained.

Southern Pacific Report.—The report of the Southern Pacific Company for 1919 covers a period during which the railroads of the United States were still under Government control. Operating revenue increased by over 8 per cent., but expenses were nearly 15 per cent. higher, so that there was a decline of 10½ per cent. in net operating revenue, the ratio of expenses to receipts having risen from 73.43 to 78.0 per cent. Wages, fuel, and materials were responsible for an increase of nearly $19 millions in expenses. The increase in the previous year from the same causes being nearly $34½ millions. With the aid of the Government guarantee, which is based on the average annual income for the three test years ended June 30, 1917, the company's net income is higher than in the previous year, as may be seen from the following table, which is compiled on the lines adopted before the lines were controlled :—

	1918.	1919.	Inc. or Dec. in 1919. Amount.	%
	$	$	$	
Operating revenue.....	221,611,206	239,657,272	+ 18,046,066	+ 8·1
Operating expenses	162,722,372	186,927,482	+ 24,205,110	+ 14·9
Net operating revenue ..	58,888,834	52,729,790	— 6,159,044	— 10·5
Deduct railway tax, &c..	9,458,356	9,530,072	+ 71,716	+ 0·1
Operating income	49,430,478	43,199,718	— 6,230,760	— 12·6
Other income	11,043,803	18,149,610	+ 7,105,807	+ 64·0
Gross income	60,474,281	61,349,328	+ 875,047	+ 1·5
Deductions for rent, taxes, and interest....	31,789,365	29,800,721	— 1,988,644	— 6·3
Net income	28,684,916	31,548,607	+ 2,863,691	+ 10·0
Deduct income applied to sinking & reserve funds	997,111	1,022,864	+ 25,753	+ 2·6
Available balance	27,687,805	30,525,743	+ 2,838,938	+ 10·2

The increase in revenue is ascribed to the fact that passenger and freight rates were not increased until June, 1918, so that the effect was only felt in the second half of the year. The "Standard Return" amounted to $48,244,660, or $4,334,355 more than the Federal income for the year. The income figures do not include certain amounts due from the Government for interest and additional compensation, which are estimated to be in excess of the amounts due to the Government. The balance-sheet shows a balance of $34¾ millions still due from the Government on account of "standard returns" of the two years of control. Dividends to the amount of $17,478,459 are to be paid, leaving $13,047,284 to be transferred to profit and loss account, which stands in the balance-sheet at $236,185,415.

Japanese Trade and Finance.—Advices from Tokyo state that at the close of the half-year trade was dull and new transactions scarce. Industry is stated to be working at about half its capacity, following on the recent financial collapse. In the silk industry the production of cocoons has decreased and producers are refraining from selling at prevailing quotations. On account of this trend of conditions the money market negotiated the turn of the year smoothly, the demands for money for settlement being on a small scale. Money at call was quoted at 5½ per cent. per annum at the close of June, the discount rate being 10 per cent. Banknotes in circulation and advances by the Bank of Japan were 1,349,000,000 yen and 660,000,000 yen respectively at the end of June. The stock market monthly settlement, which involved 567,000 shares of the value of 36,000,000 yen, was passed easily, and after the settlement an improved tone prevailed. There was some temporary revival of buying in the silk market at Yokohama, but this soon subsided, leaving business quiet. Standard silk closed the month at 1,400 yen. The Nippon Kogyo Ginko (the Industrial Bank of Japan) is co-operating with the leading banks in Tokyo, Osaka, and Nagaya to supply non-speculative industry with necessary funds.

Anglo-German Debts.—The Controller of the British Clearing Office desires to notify persons who may claim to be creditors against German nationals that they should prove their claims through the Clearing Office before July 12, 1920, notwithstanding the fact that they hold, or believe that they hold, security in respect of such claims. Inquiries should be addressed to the Secretary of the Clearing Office, Cornwall House, S.E. 1.

Finland's Foreign Trade.—The Department of Overseas Trade furnishes figures of the foreign trade of Finland, extracted from the official statistics, which show that for the first quarter of the current year imports totalled 721¾ million Finnish marks and exports 196½ millions. The principal exports were :—Paper pulp and paper, 133 million marks; skins, furs, and leather, 26 millions; and meat, 9½ millions. The principal imports were :—Colonial goods and spices, 127¾ million marks; cereals and flour, 95 millions; raw material for spinning, 62¾ millions; cloth, 68 millions; and metals and manufactures thereof, 64½ millions. Re-exports amounted to 4¼ million marks.

Swiss Tourist Restrictions.—On Friday, June 25th, the Lower House of the Swiss Legislature, in spite of opposition from the Federal executive, passed, by 69 votes to 46, a resolution condemning the local restrictions on the movement of tourists, and demanding that the inspection of passports should only take place at the frontiers. The frontier formalities are supremely vexatious, as well as somewhat costly, to visitors, but the Federal authorities fear that their removal would flood the country with Bolshevist "undesirables," and the resolution does not bind the cantonal authorities, and has still to be accepted by the Upper House, in which the "tourist industries" are probably less powerful. It was stated that 60,000 demands for admission into the country are received every month from tourists and others, and that the capital invested in the "tourist industries"—including, presumably, hotels, Alpine railways, lake steamers, and the manufacture and sale of souvenirs—amounted to the equivalent of £200,000,000, and gave employment to 43,000 persons; but no official statistics are obtainable. We are informed by the London agency of the Swiss Federal Railways that it is expected that all passport restrictions in the interior will shortly be withdrawn in deference to the resolution of the Lower House, and are reminded by the same authority, in reference to a paragraph in a recent issue, that passengers' baggage was examined before the war. It was—after the introduction of a Protective tariff in the 'nineties of the last century; but before that time the examination was purely nominal.

The Presidential Election in Chile.—The official figures of the final vote in the Electoral College, published in the London evening papers on Friday of last week, reverse the previous result. They give Señor Alessandri, the Liberal candidate, a majority of two votes—178 against 176 obtained by Señor Borgoño, his Conservative rival. The final pronouncement rests with Congress; but under the Constitution it is bound to elect the candidate who has obtained an absolute majority. As apparently there were at least two recounts, it is evident that the contest was keen; and it is believed that an attempt will be made to upset Señor Alessandri's election, though in well-in-

ALL the functions of a commercial bank center on the facilitating of business operations. The Irving organization groups its functional activities and lodges responsibility for conducting each group in a distinctive department. Whether the department has to do with import and export transactions or with domestic affairs, the result is a highly specialized and responsive service for Irving correspondents and customers everywhere.

formed quarters its success is thought to be improbable. Apparently it can only be done by invalidating a sufficient number of electoral votes to give Señor Borgoño a majority, or reduce the figures to a tie, in which case Congress decides. But it is stated that the majority in that body are in favour of Señor Borgoño.

Swan, Hunter's Report.—Another substantial rise in profits is shown by the report of Swan, Hunter, and Wigham Richardson for the year 1919. After allowing for depreciation, income-tax, and excess profits duty, profits for 1919 were £447,748, against £388,907 in 1918. Recent years' results are compared in the following table :—

	1913.	1915.	1916.	1917.	1918.	1919.
	£	£	£	£	£	£
Profits	280,717	321,676	313,753	331,784	388,907	447,748
Brought forward	24,833	32,427	43,576	47,082	37,375	45,404
	305,550	354,103	357,329	378,866	426,282	493,152

Rate	(10%)	(12½ %)	(12½ %)	(15%)	(12½ %)	(10%*)
Carried forward...	32,262	43,576	47,082	37,375	45,404	52,801

* Free of tax.

During the year reserves amounting to £855,532 were capitalised and bonus shares issued to ordinary shareholders. On the ordinary capital, which was thus doubled, a dividend of 10 per cent., tax free, was paid, as compared with 12½ per cent. for 1918 on the smaller capital. The balance-sheet, which is analysed in the usual column of this issue, shows a decline of £434,474 in work in progress and a rise of £676,919 to the large figure of £1,095,715 in "cash and bills." Last March the company acquired half the share capital of the Glasgow Iron and Steel Co., and the report states that this purchase will ensure more regular deliveries of steel material, particularly at the Clyde yards. In April the nominal capital of the company was increased to £9,000,000 by the creation of 5,000,000 additional ordinary shares.

The Outlook in Guatemala.—It is announced that the United States Government has decided to recognise the Provisional President, Señor Carlos Herrera, who succeeded President Estrada Cabrera as the result of the revolution in April last. The regular Presidential election takes place shortly, and, though several candidates are said to be likely to present themselves, little doubt is entertained that Señor Herrera will be confirmed in his office. He is a prominent sugar and coffee planter, and before the revolution had taken no part in politics. The ex-President is now in prison, and probably is no longer dangerous; it is to be hoped that the victorious party, which is said to include the best elements in the nation, will take into consideration the substantial services he rendered to the country in his 22 chequered years of rule. The revolution seems to have involved little damage to property and few casualties, and the army and the masses, on whose support Cabrera had relied, turned against him. The export of coffee, the staple product of the country, is proceeding satisfactorily, though it is somewhat affected by the fall in price, and direct trade with Europe has been resumed. The country seems likely to make a rapid recovery. Since the rearrangement of the Foreign Debt under diplomatic pressure in 1913, the interest has been duly met, and sometimes remitted well in advance of the due date, and last year £30,000 was also remitted on account of the sinking fund payments, which should have been resumed in 1917. Nothing, however, has been done towards payment of the arrears of interest as provided under the scheme of rearrangement. It would be well for the new Government to give the matter its attention.

Distillers' Company.—A further large increase is shown in the profits of the Distillers' Company for the year ended May 15th last. Gross profits at £669,464 show an increase of £167,085, and as income-tax and administrative charges absorb practically the same amount as last year the net profit is higher by a similar amount. The following table gives results for the past five years and for the year preceding the war :—

YEAR ENDED MAY 15th.

	1914.	1916.	1917.	1918.	1919.	1920.
	£	£	£	£	£	£

Ordinary div..	130,000 (10 %)	130,000 (10 %)	130,000 (10 %)	195,000 (10 %)	195,000 (10 %)	204,989 (10 %)
Carried forward	21,025	60,602	61,873	65,357	70,435	100,526

The reserve appropriations consist of £200,000 to the reserve fund, £5,000 to the fire insurance fund, and £50,000 to the superannuation and provident fund. The dividends remain unchanged, the ordinary distribution being made free of tax. The directors point out that in-

stead of paying a higher dividend, for which the profits are sufficient, it is necessary to retain the extra profits in the business, "owing to the larger capital required to finance a business at present values." They are also asking powers to increase the capital by £1,500,000 to £4,000,000, part of which is to be issued shortly. The balance-sheet shows an increase of £422,600 in loans from subsidiaries, and an overdraft from the bank for £170,800 appears. On the assets side loans to subsidiary companies stand at £655,800 as against nothing a year ago, stocks are £847,050 higher at £2,002,000, and cash has fallen by £473,700 to £179,900.

It is announced by the Department of Scientific and Industrial Research that Dr J. S. Flett, F.R.S., at present Assistant to the Director in Scotland, has been appointed Director of the Geological Survey and Museum. Dr Flett succeeds Sir Aubrey Strahan, K.B.E., F.R.S., who retires this month, when Mr G. W. Lamplugh, F.R.S., Assistant to the Director in England, also retires.

Oversea Correspondence.

UNITED STATES.—THE POLISH LOAN—"FIRST FEDERAL FOREIGN."

(FROM OUR CORRESPONDENT.)

New York, June 29.

Something more than the ordinary summer dulness has pervaded the security market during the last two weeks, with the volume of turnover on the Stock Exchange gradually contracting daily until the abnormally low average of 400,000 shares was reached. New issues and old are treated with the same indifference, and nothing meets with any spontaneous demand outside of the prime 60 and 90-day paper that can be had in volume all the way from 6 to 7 per cent. During the fortnight both the regular quotas of British and French Treasury bills were issued at a 6 and 6½ per cent. basis respectively, although the floating supply of British Treasury bills is being gradually and quietly reduced by order of the Exchequer; that is, each new issue is slightly less than the amount of bills redeemed, which is, doubtless, a part of the courageous British scheme of getting the books to balance again as soon as possible regardless of how high taxes are forced in the effort.

New announcements were exceedingly scanty, although the opening campaign designed to place $50,000,000 20-year 6 per cent. Polish bonds at par was looked upon with interest. No bank or group of banks is standing sponsor for this issue, although the National City Bank is acting as depositary for the loan while it is in the process of being sold by various organisations among the patriotic Polish citizens of the United States. The response according to the managers has been very gratifying, although it is amusing to note that the greater portion of sales so far have been made through exchanges for United States Liberty bonds, subscribed for by the same Poles during the big drives of the war.

On June 21st the "First Federal Foreign Banking Association" opened for business with a capital of $2,100,000 and a surplus of $105,000. This is the first bank to be oragnised under the Edge Bill, and is controlled through stock ownership by a wide group of representative national banks and banking houses. Under the law this institution will be under the supervision of the Federal Reserve Bank, and will engage in the business of extending long time credits to foreign purchasers of American manufactured goods. When the original capital has been exhausted in loans of this character, the acceptances or commercial paper received by the institution on these transactions will be used as collateral as the basis for a note issue, which will probably take the form of 6 per cent. 90-day notes similar to Government certificates, which will be sold to the public to replenish the Treasury. Under the law the Edge Banks may issue ten times their capital stock in such notes, and when they have reached the maximum may increase the capital. The success of this system depends upon the ability of the market to absorb this new security, although when once known the paper should be popular.

Among the new issues of the week was a $12,000,000 loan to Miller and Lux, Inc., secured by ten-year first mortgage 7's. This company is one of the largest owners of land and cattle in the State of California, and shows net quick assets in excess of $15,000,000, and total assets in excess of $50,000,000. $5,000,000 Cleveland Electric Illuminating Company 15-year first mortgage 7's were brought out on a 7½ per cent. basis, and $4,000,000 Shawinigan Water and Power Company six-year 7½'s on an 8 per cent. yield. The latter issue is collaterally secured by $5,344,000 of the company's first and refunding 6's. This company is one of the largest producers of hydro-electric power in the world, serving a population of about a million and a-half in and about Montreal and Quebec. The majority of these loans found comparatively hard sledding, although the prices were considered attractive.

FRANCE.—INTERNATIONAL CHAMBER OF COMMERCE—WAR LOSS ESTIMATES—BOURSE.

(FROM OUR CORRESPONDENT.)

Paris, July 6.

The first Congress of the newly-formed International Chamber of Commerce, after sittings that have lasted for a fortnight, was brought to a close in Paris yesterday by an informal luncheon. The sittings of the Congress have been conducted to a large extent in private, and very little reference has been made to them in the French Press, although full recognition has been paid to the fact that this first Congress is without precedent in the commercial history of the world. The new Chamber owes its origin to the insistence of American business men on the necessity for the immediate creation of a permanent organisation of all the economic forces of the Allies. The Americans showed their faith in their idea by sending no fewer than 160 delegates, representing 1,400 Chambers of Commerce in the United States; in other words, the greater part of the industrial, financial, and commercial power of the New World.

The work accomplished by the Congress during its initial sessions may be summed up by stating that it recommended immediate action should be taken by the Allied nations:—

1. Above all things, to reconstruct the devastated regions of France.
2. To assure the disarmament of Germany.
3. To hasten the development of the hydro-electric forces of the world, in order to meet the general shortage of coal.
4. To utilise the existing coal on a rational and economic basis.
5. To augment as soon as possible the world's production of coal and petroleum.
6. To establish an equitable *régime* in regard to the distribution of raw materials.
7. To take into immediate consideration the measures that should be taken to stabilise international exchange.
8. To unify Customs terminology.

All these questions have formed the subjects of detailed discussion, the record of which will doubtless be available very shortly to all interested.

The French case at Brussels and at Spa as regards the amount of reparations to be made by Germany is based upon an important report that has been drawn up by M. Dubois, the president of the Allied Reparations Commission, and his collaborators. This report has not yet been made public, but I have been able to obtain certain bulk figures which set forth the official estimate of the amount of loss sustained by France under some twelve or more categories. It may be interesting to print these side by side with the German estimates of the total

damage under the same headings for which France seeks reparation. The German estimates are also official, and have been extracted from the report drawn up by the German Indemnity Commission (Reichsentschadigungskommission), which was appointed by the Government to arrive at an estimate of the amount of damage done. Both series of estimates are based on pre-war values :—

	French Estimates in Francs.	German Estimates in Marks.
Industrial establishments	7,260,269,456	775,250,000
Mines (included with industries by French)	..	427,252,000
*Habitations and monuments	29,000,000,000	1,459,579,008 / 1,301,000,000
Agriculture	16,249,000,000	674,716,000
Agricultural drainage, &c.	46,000,000	
Hunting and fishing	88,000,000	209,000,000
Woods and forests	1,400,000,000	
Railways (main lines)	3,156,000,000	405,320,000
Do (narrow gauge, trams, &c.)	468,000,000	
Posts, telegraphs and telephones	295,000,000	
Roads and bridges	1,218,000,000	97,100,000
Navigable rivers and canals	276,000,000	
Maritime ports	78,000,000	
Taxes and war contributions	2,500,000,000	nil
Portable property confiscated	(Unclassified)	1,878,625,000
	62,043,269,456	7,228,622,000

* Classified by Germans as "buildings and furniture and objets d'art.

The asterisks denote items in regard to which the German Commission has made reduction on the ground that a certain proportion of the damage was made good by the German Government during and after the war. These deductions amount to a total of 215,000,000 marks, bringing the net total of the German official estimates down to 7,213,000,000 marks. Transforming this amount into francs, at the normal rates of exchange, it results that, in round figures, the French estimate the damage done to civilian property in the invaded districts at 62,000,000,000f, while the German Commission places it at only 9,000,000,000f. In other words, expressed in sterling, the French estimate their losses at 2,480 millions sterling, while the Germans place it at little over 360½ millions. Both parties, as I have stated, base their estimates on pre-war prices, so that, if taken at present-day values, the French estimate of their losses would be in the neighbourhood of 10,000 millions sterling. These figures do not, of course, include the cost of military pensions and allowances for widows and orphans, which must also, under the terms of the Peace Treaty, be met by Germany. The amount claimed by France under this heading is a capital sum of 58,000 million francs.

The June settlement passed off easily, and as a result there has been a notable wave of optimism on the Bourse. The *Situation Economique et Financière,* however, in a long introductory notice to its Bourse quotations emphasises the importance of the American factor, which is one that has long been causing anxiety both to French and British bankers here. It points out further that no improvement of any serious character can be expected for some time to come, on the ground that all available American funds will be occupied in financing the American harvest, an operation that used to be effected largely through the mediation of European banks. Consequently, it states, the New York market is bound to remain hesitating, and this hesitancy will be more or less accurately reflected in France. French Rentes have generally been in demand, the 3 per cents. at 58.30 having gained a franc. Banks have recovered much of their previous decline, Banque de l'Algérie rising from 4,190 to 4,275 and Banque de Paris from 1,530 to 1,555. Transport is, on the whole, better. Suez, for instance, is at 6,400 as against 6,200, Transatlantique at 455 to 437, and Chargeurs Réunis at 2,770 to 2,300. Affréteurs, however, are back from 1,100 to 990. There is a general mild slump in metallurgical undertakings, Aciéries de France, for instance, being at 970 as against 1,030, Chantiers de Sainte Nazaire at 2,000 as against 2,050, and others similarly. Petrol shares are again somewhat in advance, Royal Dutch moving forward from 27,700 to 30,575, Shell from 439 to 463, and Mexican Eagle from 420 to 436.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows :—

GERMANY. — REICHSTAG — FINANCES — ECONOMIC COUNCIL—EXCHANGE AND BOURSE—PRICES—FOREIGN CAPITAL.

(FROM OUR CORRESPONDENT.)

BERLIN, July 1.

THE first Republican Reichstag was received this week by the expected Minority Cabinet, under the leadership of Dr Ferenbach, President of the now dissolved National Assembly, and a member of the Centre Party. The Cabinet is composed exclusively of men from the German People's Party, the Centre, and the Democrats, with a critical, but not on principle, oppositional Social-Democratic Party outside. An attack on the Independent Socialists in the opening debate by the former Social-Democratic Chancellor, Herr Scheidemann, seems to indicate that the Government will have a fair measure of Social-Democratic support. The Cabinet's first work was to present emergency estimates for the months July-October, this being made necessary by delay in getting through the estimates for the whole financial year 1920. The estimates contain 450 million marks for encouraging house building. The Minister of Finance declared the Public Debts of all Germany to be now 265 milliards. After suspension since 1914, publication has been resumed of the current revenue receipts. The total receipts from duties, taxes, and stamps between April 1, 1919, and January 31, 1920, were 6,025,226,960 marks, out of the 13,541,600,000 marks estimated for the whole financial year (ending March 31st). The largest receipts were :—

	Marks.
Extraordinary War Tax of 1919 (on increase of income)	1,011,436,571
Coal Tax	1,007.457.932
Customs Duties	652,213,728
Tax on sales	589,220.255
Tobacco Tax	582,088,817
Railway Freight and Passenger Tax	364,692,032
Wine Tax	311,367,353

The Department of Posts and Telegraphs received in the ten months 1,404,230,279 marks, as against 1,335,881,500 marks estimated for the whole financial year. The disparity between total estimates and receipts is mainly due to the fact that much of the Erzberger taxes had not been got in, the cause partly being that the new centralised collection organisation, which for direct taxes largely supersedes the organisations of the States, is not yet at work.

The inaugural meeting yesterday of the Federal Economical Council (Reichswirtschaftsrat), described as "the world's first Parliament of Business," is perhaps more important than the Reichstag meeting. The Council's competence extends over every branch of finance, industry, and trade, and over all social and labour questions connected therewith. Its 320 members have Parliamentary immunity, and are paid salaries. They are elected, mainly by private associations of the respective interests, in eight groups, which represent agriculture, forestry, gardening and fisheries industry, trade banking and insurance, communications, handwork, consumers (house-owners, tenants, housekeepers, domestic servants, restaurant keepers, and the Communes), officialdom and the Liberal professions, and there are two other groups, one chosen by the Reichsrat to represent specific local interests, the other by the Government from among citizens qualified to serve the national economic cause. The Council is, therefore, an assembly of experts and interests. Its creation was provided for by the Constitution, but it has come into being only after sharp controversies over its constitution and power. The more radical-minded demanded that each of the interests (industry, trade, &c.) should have a number of representatives proportionately to the number of its employees; this would have produced a Council composed much like the Reichstag. The more conservative accepted the Government's plan (which was adopted) that the representation should be apportioned according to importance of the interests, but demanded that the Council's decisions should be binding on the Government; this would have almost entirely superseded the Reichstag, and substituted a class Parliament somewhat resembling the former European Etats-Généraux. (The Conservatives in 1918 planned to reform the Prussian Diet on these lines.)

The Council has therefore only an advisory voice; but until its opinion is given no Bill may be passed by the Reichstag; and the Reichstag must consider the Council's Bills. Further, Ministers must hear the views of the Council's Committee before taking non-legislative measures on economical matters. In the Economical Council will ultimately meet representatives of all the subordinate Councils governing the new compulsory trusts, also of the proposed All-German Councils of Employers and Employed, and probably, later, of special chambers of Consumers. This, at least, is a feature of the "Plan Industry" scheme for creating an integral, homogeneous organisation of production, trade, finance, and social issues, which was launched by the former Ministry of Industry, Wissell, in May, 1919, and was planned by his Under-Secretary, Wichard von Moellendorff.

The Foreign Exchanges, and with them the Bourse, moved very little during the past week, but the tendency was upward, and the Bourse was accordingly inclined to firmness. The month of June witnessed the stablest Reichsmark exchange since the freeing of trade in foreign currency last September caused a rapid mark fall. The pound and dollar rates are almost exactly as they were at the end of May. As against other exchanges, the mark also moved little, so indicating all-round improved stability. Detailed calculations in a Berlin newspaper put the mark's real value at 10 pfennigs gold, which is near its present selling price; this estimate is probably true, as far as commercial purchases are concerned; but the mark's buying power in the items that make up the cost of living is, owing to restriction of rent, maximum food prices, and slowness in getting in taxes, very considerably higher; and living in Germany is still cheaper than in England. Adjustment of prices to the foreign level is, however, proceeding by the worst possible means—inflation; the Reichsbank report for the third week of June shows an increase of the note circulation by 847.9 mil. marks, as against a decline in Kassenchein circulation of 53.7 mil. marks, the total circulations of the two currencies being 51,658.5 mil. marks and 13,285 mil. marks. The liabilities of the Bank, however, show a drop for the week of 3,492.2 mil. marks, to 37,529.5 mil. marks. On the bourse some of the oil, colonial, and shipping stocks were most sought, owing to fresh reports of favourable compensation conditions for property lost under the Peace settlement; but threats of a new general strike, the continuing food riots, and uncertainty as regards Spa, prevented general bull activity. In addition, bourse experts take it as a permanent principle that no pronounced movement one way or the other can start until the politically-governed foreign exchanges give a lead; and the dominant curiosity is as to the effect of Spa on the exchanges, and not immediately upon the bourse.

Commodity prices are, also, in accord with the exchange stagnation, moving little. Raw textiles fell slightly during the past month, cotton fetching 45 marks a kilo on June 4th and 40 marks on 26th. Cotton yarns in the same period fell from 75-95 marks to 63-75; and cloth per metre from 11-15 marks to 9.50-13 marks. The prices of raw chemicals during the last three weeks of the month varied little, but were on the whole downward. Hides and leather fell rather more; and boots, owing to the continuing "buyers' strike," fell heavily. Since late April the average retail price of boots in Berlin has fallen from 395 to 180 marks. The official iron prices fixed by the Iron Industry Union for June and July, have not been altered; the effective prices have fallen somewhat owing to the smaller demand, and to weakening of the grip of illicit dealers. Scrap iron, which these dealers had cornered, and which in March, even in legitimate sale, fetched 2,800 marks a ton, was quoted at 600 marks on the 26th. The prices of legumes, which are important owing to their almost universal use in bread, fell slightly during the month; and are at present, according to kind, between half and a quarter of the maximum prices in the beginning of March, and as a rule lower than a year ago. The movements of other retail food prices since January 1st, and their approximate maximum prices are (in metric pounds) :—

In Free Sale.

	Jan. 1.	Maximum Price and Date.	June 26.
Rice	2.80	12.50 (1/3)	5.50
Oatmeal	2.20	4.30 (15/4)	2.25
Lard	17	24 (15/4)	18
Condensed milk	7.5	10.75 (1/5)	8.75
Coffee (best)	17	30 (15/4)	28
Cocoa	16	28 (1/3)	20
Eggs (each)	1.80	2 (1/3)	1.90
	In Rationed Sale.		
Potatoes (Native)	0.22	0.40 (1/5)	0.50
Sugar	1.20	2.38 (1/6)	2.38
Bread	2.20	3.90 (1/6)	3.90

Imported foods have not fallen as much as the supplying countries' exchanges. Much of the imported food now being retailed was bought when the mark was at its lowest. Rationed goods have mostly not fallen at all, or have even risen, the reason being injudicious buying in a panic by the municipalities, which feared shortage and a further rise in the produce market rates. Municipalities are now being obliged to sell inferior canned or frozen foreign meat dearer than the best native meat; and this has given a fresh handle to the agitation against the "Zwangswirtschaft."

Participation by foreigners in German industrial, trading, and shipping undertakings is increasing. In addition to the American agreement with the Hamburg-Amerika Line, and to plans for a similar deal with the Norddeutsche Lloyd, foreign capital, with more or less foreign control, is now in the Allgemeine Elektricitaets-Gesellschaft, the Felten and Guilleaume A.G., of Carlswerk, the Continental Caoutchouc Co., of Hanover, the Faunwerke Automobile Co., the Seefahrt Transport (Insurance) A.G., the Helios Insurance Co., of Cologne, the Nordstern Transport Insurance Co., of Berlin, and a large number of less important concerns. The American investment in such companies, and in municipal bonds, is estimated at 15 milliard marks. The mark's recent ex-

change rise has brought in much money which would have been more promisingly invested four months ago. The issuing of preference stock, to be held by Germans, with increased voting power, with the aim of preventing foreigners gaining complete control, is still being practised, but on a reduced scale.

ITALY. — INCREASED TAXES — ABOLITION OF BEARER SECURITIES.

(FROM OUR CORRESPONDENT.)

TURIN, July 5.

As the first act of his Government, Signor Giolitti has laid on the table of the Chamber of Deputies several Bills purporting to put Italian finances in a sound condition. As I stated in a previous letter, the situation is grave. The Finance Minister has announced for the financial year 1920-21 an ordinary revenue of 9,000 million lire, and an extraordinary one of 1,500 millions from sale of war materials, &c., a total of 10,500 millions, against which the ordinary expenditure amounts to 11,545 million lire. This deficit would by itself not be very serious, as we can reasonably hope for a continuous growth of the new taxes, which in the present year will not give their highest product. To the ordinary Budget one must, however, add the extraordinary, 5,500 million lire for bread subsidy; 2,850 millions for expenses connected with War Department, the fleet, and the colonies (liquidation of war expenses); 2,000 millions for damages to be repaired in the provinces occupied by the enemy in 1917 and 1918; 1,300 millions for losses on maritime transports; 300 millions for relief to disabled men, &c.; 650 millions for high cost of living subsidy to State employees; 600 millions deficit of the State railway Budget. The extraordinary Budget thus reaches 13,200 million lire. As Signor Giolitti has hitherto said nothing concerning the bread subsidy his promises of economy are somewhat vague. As a means of counteracting the huge deficit he has laid more weight on new or increased taxes. The taxes on motor-cars will be greatly increased, especially on private motor-cars. The tax will be composed of two parts: one fixed, which rises from 310 lire yearly for motor-cars of not more than 9 h.p. to 2,500 lire for cars from 40 to 50 h.p. To the fixed tax is added a proportional tax, which is 10 lire per h.p. if the entire force is not higher than 12 h.p., 30 lire from 12 to 16 h.p., 90 from 16 to 24 h.p., 100 from 24 to 35 h.p., 150 from 35 to 50 h.p. Cars of 50 h.p. and more are put in a special class, which is taxed at the lump sum of 15,000 lire yearly. This tax will be well-nigh prohibitive, except for the very richest men.

The succession tax has been already increased four times in the present century; if this fifth increase be passed into law, the tax will weigh heavily on great fortunes. It would take too long to summarise the proposal in detail, as the rates of the tax vary in proportion to the degree of relationship between the deceased and the heir or legatee, to the amount of the inherited portion and to the estate of the heir or legatee. For instance, in the case of succession from father to son, the tariff of April 21, 1918, was of 1 per cent. if the inherited portion did not exceed 1,000 lire, and 1.50 per cent. if not 5,000, reaching 7 per cent. if the portion reached 1,000,000 lire, 8 per cent. up to 2,000,000, and 9 per cent. if the portion of the heir or legatee exceeded 2,000,000 lire. A decree of November 24, 1919, had introduced new rates for inherited portions of more than 2,000,000, reaching 12 per cent. on inherited portions of 20,000,000 lire and more. The new tariff now proposed leaves untouched the rates up to 100,000 lire, for which it remains from 1 to 4 per cent. At 250,000 the rate is increased from 5 to 6 per cent., for 500,000 lire from 6 to 9 per cent., for 1,000,000 from 7 to 12 per cent., for 2,000,000 lire from 8 to 13 per cent., for 5,000,000 from 9 to 15 per cent., for 10,000,000 from 10 to 18 per cent., for 20,000,000 from 11 to 20 per cent., and for inherited portions upwards of 20,000,000 lire the rate is increased from 12 to 25 per cent. In addition, if the son was, previously to his inheritance, personally possessed of an estate of 200,000 lire or more, to the succession tax is added an additional tax of 10 per cent. on his hereditary portion, provided that this tax is not higher than a third part of the difference between 200,000 lire and the previous estate of the heir or legatee. The taxes on other relatives are construed on the same lines. As I cannot go into too many details, I will say only that the tax for successions between relatives on the sixth grade or more, or between non-relatives, rises from 18 (portions up to 1,000 lire) to 70 per cent. (portions of more than 20,000,000 lire), to which is to be added the additional tax of 10 per cent. if the previous estate of the heir or legatee was higher than 200,000 lire.

Another highly significant Bill is one by which all war profits from August 1, 1914, to December 31, 1919, are forfeited to the public Treasury. Italy had a war profit tax which from the original 1911 maximum rate of 40 per cent. was already in 1916 put up to 60 per cent., superimposed to the ordinary income-tax. By a Royal decree of November 24, 1919, to the war profit tax was superimposed an increment of wealth tax, which absorbed from 5 to 80 per cent. of the remainder. If the Bill of Signor Giolitti becomes law, as is highly probable, all the old taxes will be merged in a general confiscation of 100 per cent. This applies to war profits, as defined by the law, viz., profits above 8 per cent. on capital or above income taxed in 1912-13, of industries, trade, commerce, and intermediation. The confiscation aims at social pacification; but it is doubtful if the ruin or embarrassment of many enterprises which, with a little capital, have obtained great success, will be followed by a real pacification of the masses. They will always point to many examples of people getting rich, from whom the wealth acquired during the war has not been confiscated owing to difficulty of assessment. This confiscation is an ominous precedent in the case of future wars. Who will risk capital and labour with a prospect of confiscation? The Bill applies to foreigners, who during the war have obtained in Italy profits which may be legally termed war profits. The last momentous Bill obliges all possessors of securities to register them in their name. The Bill puts an end to bearer securities, which were until to-day almost the only form known to Italian investors. All securities, from the State Rentes and municipality debentures to joint stock company shares and debentures, will cease to be bearer securities, and will have to be registered in the name of the possessors. The precedent most frequently quoted in favour of this far-reaching reform is the English one. The Government aims by means of compulsory registration of all securities at knowing exactly the capital and income of all taxpayers. When taxes were principally raised by a uniform or constant rate of taxation, it was a matter of indifference to know the names of possessors of securities. But to-day, when income-tax, capital tax, and succession tax are made more and more progressive, it is very important to know who are the true possessors of securities. Bearer securities are able to be passed over by taxpayers when they make their returns for assessment. When the scale of graduation is very steep, the temptation to fiscal fraud is great indeed. The bourses have been very depressed in consequence of the announcement of the Bill. Almost all securities suffered a fall. Experience will show if registered securities will be marketable as well as bearer securities, and if savings will continue to be invested in public and private securities.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised	£3,000 000
Paid Up Capital	750,000
Reserve Fund and Undivided Profits	848,430

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

CANADA.—CROP REPORTS—THE BUDGET—TRADE CONDITIONS — CANADA - WEST INDIES CONFERENCE—THE STEEL MERGER.

Crop reports in Canada give grounds for optimism. One district in the West around the town of Lethbridge has suffered severely from windstorms and soil drifting which has caused a crop loss to the local farmers varying from 20 to 75 per cent., but the area affected is quite limited, and from all other points uniformly good reports are coming in. More moisture might be welcomed in Southern Alberta, but the growth, generally speaking, is excellent. Ontario and Quebec also report satisfactory conditions, but the hay crop threatens to be light. In Eastern Ontario lack of rain in the closing weeks of May and first half of June affected the possible yield, but ample rains have now fallen, and crops of oats and potatoes show excellent promise. In the fruit-growing districts bumper crops are assured, and Ontario expects to see a revival of its export apple trade. Strawberries are a glut on the market at some points, and the chief anxiety now concerns help for harvesting the fruit crop. All the Maritime provinces report crop prospects most encouraging, and anticipate a record harvest of fruit, grain and roots.

The Dominion Bureau of Statistics has now published its preliminary estimates of the areas sown to crop in Canada for 1920. The total area seeded to wheat this year is estimated at 16,921,000 acres, as compared with 19,126,000 acres in 1919, a decrease of 2,205,000 acres, or 12 per cent. Practically all the deficit is in spring wheat in the prairie provinces, and the lateness of the spring and seeding time was responsible. 15,291,000 acres have been sown with oats as compared with 14,952,000 acres in 1919, an increase of 2 per cent. Barley, rye, and alfalfa show a decrease in acreage of 3 per cent., peas of 5 per cent., and hay and clover of 1 per cent. Mixed grains are practically equal to last year, and a hazardous estimate of the potato acreage shows a similar state of affairs. Farmers would have planted more potatoes if seed had been available at moderate prices.

Expressed numerically in percentage of the last ten years, the average condition of crops reported for all Canada on May 31st was as follows, the figures within brackets representing the condition at the corresponding date last year :—Wheat, 98 (98); oats and barley, 98 (95); rye, 96 (101); peas, 98 (91); mixed grains, 101 (92); hay and clover, 95 (101); alfalfa, 94 (95).

The Budget emerges from the debate in committee in a very different guise to its original form. From the day of its introduction the Government have been besieged by delegations representing almost every business interest in Canada, who demanded wholesale amendments to the luxury and sales taxes. On June 9th, in Committee, Sir Henry Drayton proposed a long list of amendments which reflect the pressure of many dissatisfied elements, exercised through personal appeal or with the assistance of Members of Parliament. As the Committee stage progressed, there was a constant fire of criticism, and the Finance Minister accepted fresh amendments at every sitting. He extended the list of exemptions to the sales and luxury taxes, but the most important change was the decision to raise the luxury tax on most commodities from 10 to 15 per cent., but only to levy it, as in the United States, on the amount of the price in excess of the sum fixed as a luxury limit. The Finance Minister had also to admit that in respect to many commodities the luxury limit had been fixed at too low a figure, and agreed in their cases to raise it substantially. Numerous members representing financial and manufacturing interests pressed for the total removal of the business profits tax, but the Government declined to accede to the demand. The main criticism directed against the new taxes was that they would be expensive to collect, would be conducive to fraud, and would inevitably increase the cost of living. The merchants dislike the idea of acting as tax collectors for the Government, and Mr Crerar, the agrarian leader, tried unsuccessfully to force through an amendment which would compel the sales and luxury taxes to be paid by manufacturers and wholesalers and relieve retailers of the burden. Most points now report a revival of trade coincident with the settlement of the Budget's terms. Toronto and Ontario wholesalers report business in clothing and men's wear as decidedly good. The demand for summer goods is steady, and tailors, who had been freely cancelling orders, have ceased to do so. The excellent crop prospects of the Maritime provinces are responsible for keen activity among manufacturers and wholesalers. Winnipeg wholesalers report a good recovery in the dry goods and hardware trade, but retail business, particularly in boots and shoes, is still hanging back. In Alberta and British Columbia, wholesalers and manufacturers are both busy. It is admitted that the luxury taxes have already been responsible for a decline in prices of some goods through a desire to bring them below the taxable limit. The wholesale price of most kinds of furs shows a reduction of from 15 per cent. to 25 per cent., but it has not reached the retail trade. The stock markets are still dull, and the banks are maintaining their conservative policy. The total of their savings deposits increased in May by practically $20,000,000, and now stands at $1,229,073,515. Business collections, which had lately been slow, show a considerable improvement.

The conference between delegates representing Canada and the various British Colonies in the West Indies with Mr L. S. Amery attending on behalf of the Imperial Government, has now concluded its deliberations. Its full report will not be issued till August 4th, but a preliminary statement has been given out to the effect that the agreement arrived at

(1) Carries the consent of all the delegates at the conference.

(2) Is framed upon an increase of the mutual preference now granted, and an extension of the list of products on which preference is now given.

(3) Includes in the mutual agreement all the British colonies in the West Indies (Jamaica and others had stood out of the original agreement).

(4) Contemplates the mutual co-operation of the signatories towards the provision and maintenance of improved steamship transportation, and contains also a memorandum urgently impressing the need for improved cable communication.

Colonel Grant Morden and his associates are encountering some obstacles to the construction of the British Empire Steel Corporation. The Dominion Steel Company is the most important of the enterprises which the Morden merger seeks to acquire, and a fortnight ago six leading directors of this company first issued a letter advising the shareholders to suspend ratification till further information was disclosed by the promoters of the merger, and then attempted to get a legal injunction to prevent the holding of a shareholders' meeting on June 18th. The courts refused the injunction, and the dissentient directors, who had asked for proxies from the shareholders, were all defeated for re-election at the general meeting. But the six protestants, though defeated in the first round, do not intend to let the matter rest there. They take the ground that their company is a substantial and prosperous concern, and the promoters of the merger propose to link it up with a number of much weaker institutions, for which extravagant prices are to be paid. They insist that the information promised by Colonel Morden and his friends when the preliminary agreement was reached, has not been forthcoming, and that in fighting ratification they are protecting the interests of Dominion Steel shareholders. It is now generally admitted that the terms offered to some of the smaller companies are unduly generous, and opinion in Montreal now expects at least two of them to be dropped out of the scheme.

AUSTRALIA.—WOOL—WEATHER—BANKING RETURNS.

(FROM OUR CORRESPONDENT.)

MELBOURNE, May 22.

THE question of the management of the next Australian wool clip, 1920-21, is still engaging attention. The first scheme, under which exports would only be permitted subject to the wool having been passed through the auction sales in Australia, in order to give the opportunity for regulating offerings, was submitted to a vote of woolgrowers, and 74.88 per cent. of those voting assented to the scheme. As it had been announced that application to the Government for the power of compulsion would only be made if 75 per cent. voted in favour of the scheme, and as a large number of growers did not vote at all, the scheme has fallen through.

Another scheme has been put forward by the Commonwealth Prime Minister, Mr Hughes, and has received partial approval by the representative bodies of woolgrowers. Under this scheme it is proposed that exports of the new clip should not be permitted before October 1st next, that the British Government should be requested not to hold sales of Australian wool in London for the seven months from September 30, 1920, to May 1, 1921, that the low-class wool held back in Australia, said to be about 500,000 bales, should not be shipped until after May 1, 1921, unless the British Government can negotiate a sale to the Central European Powers at, say, three times the appraised value in British currency, and that any wool remaining in Australia at October 1st next in which the British Government has an interest, should be sold by auction in Australia on account of the British Government and the Australian wool pool after May 1, 1921, unless sold to the Central European Powers in the meantime. The second portion of Mr Hughes' proposal, to which the representatives of the woolgrowers have not assented, relates to the payment to be received from the British Government on account of the half-share of profits on the resale of Australian wool purchased by it during the last few seasons. Mr Hughes proposes to negotiate with the British Government for an immediate payment of £10,000,000 on account of accrued profits. But instead of paying the amount in cash to the woolgrowers, he proposes to give them five-year bonds, and to use the £10,000,000 as a partial set-off against War advances made by the British Government to the Commonwealth during the last few years, and he also proposes to treat further profits beyond the ten millions in the same manner whenever they are received. Virtually, this will amount to a forced loan by the woolgrowers to the Commonwealth Government, which requires money to square accounts with the British Government, not to speak of fresh loan expenditure for "repatriation" and other purposes in Australia. But while this may present the most attraction to the Government for financial reasons, the main point to be considered in the present or any other scheme, is that, in face of the accumulation of unsold wool, the process of realising the new clip, especially the lower grades, will require unusual management in order to avoid such a pressure to sell on the part of competing growers as would involve the risk of a collapse in prices.

The season in Australia is following a doubtful course. With moderate autumn rains, the outlook for the next wheat crops in Victoria and South Australia is not unpromising, subject to the weather in the winter and spring months. Western Australia has made a favourable start. But in New South Wales the season is so far shaping badly both for farmers and pastoralists, and the latter have sustained heavy losses of sheep. Rainfall during the next few weeks, if it represented a real change in the season, would be beneficial, but in any case it is feared that the wheat crop in that State for 1920-21 will be small, and that the wool clip will show a reduction from that of 1919-20. The New South Wales Government is now offering a local loan of £2,000,000 at 5½ per cent., free of State and Federal income-taxes, for the purpose of providing for advances to needy farmers, and for the construction of wheat silos for bulk storage.

The principal totals of the quarterly average banking returns to March 31st (exclusive of the Commonwealth Bank of Australia) of liabilities and assets within Australia and New Zealand, compare with those for the previous quarter, and the corresponding quarter of 1919, as follows :—

	March Quarter, 1919.	December Quarter, 1919.	March Quarter, 1920.
Deposits—	£	£	£
Not bearing interest.....	109,962,566	127,422,264	143,951,985
Bearing interest	121,860,295	120,816,502	122,924,410
Total deposits.....	231,822,861	248,238,766	266,876,395
Coin and bullion	27,858,729	27,820,837	27,512,908
Australian notes (Govt.)	21,736,838	26,550,709	30,530,790
Legal tender notes of other banks (N. Zealand only) ..	1,001,852	743,188	1,212,994
Total cash	50,597,419	55,114,734	59,256,692
Advances (inc. Govt. securities)	206,886,861	195,841,300	196,188,949

Deposits show an increase of £35,053,534 during the year, of which £12,503,470 is in New Zealand and £22,550,064 is in Australia. But against this increase shown by the ordinary banks, the deposits of the Commonwealth Bank of Australia are smaller by £10,218,672, owing to the reduced balances within Australia of the Commonwealth Government. The advances of the ordinary banks show a decrease of £10,697,912. Advances of the Commonwealth Bank (exclusive of Government and municipal securities) also show a decrease of £3,106,734. These decreases are due partly to the difference in the wheat advance made by the banks to the Government wheat pool, the average amount of which for the March quarter, 1920, was about 14½ millions less than for the March quarter, 1919, and partly to the reduction in the advances by banks to their customers to facilitate War Loan subscriptions, repayments of which have been coming in well. The effect of the large increase in bank deposits, and the reduction in advances locally is that the banks now hold much larger balances in London than a year ago.

The principal figures (within Australia) of the Commonwealth Bank of Australia, not included in the table above, compare as follows :—

	March Quarter, 1919.	December Quarter, 1919.	March Quarter, 1920.
Deposits—	£	£	£
Not bearing interest.....	32,572,233	23,877,325	20,594,745

DENMARK.—FOREIGN DEBTS AND CREDITS—EXCHANGE MOVEMENTS.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, July 1.

THE question of foreign exchanges continues to engage much attention, and the declining value of the Danish kr is viewed with disappointment and some concern. At the instance of the now defunct Foreign Exchange Council the Statistical Department has compiled a survey of Denmark's liabilities abroad and foreign debts to Danish creditors, the figures referring only to such credits and liabilities as are payable on demand or at short notice, whereas it does not comprise stocks and shares, which are not considered to be of much value at present. The aggregate of foreign indebtedness to Denmark amounts to 803,200,000 kr and Danish liabilities to 838,800,000 kr, added to which sum comes the value of goods on order 398,900,000 kr, making total liabilities amounting to 1,237,700,000 kr. Danish banks have 331,400,000 kr owing to them abroad, but their foreign liabilities amount

to 481,400,000 kr, insurance companies figure with 156,400,000 kr and 40,900,000 kr respectively, industrial concerns with 87,900,00 kr and 114,300,000 kr respectively, trading concerns with 121,900,000 kr and 141,100,000 kr, and shipping concerns with 82,200,000 kr and 45,400,000 kr respectively. The biggest Danish liability is to England, 432,000,000 kr, with only 161,700,000 kr on the other side, the corresponding figures for Germany being 231,800,000 kr and 109,600,000 kr. For the United States the figures were 128,500,000 kr and 214,000,000 kr respectively. This survey is made up for March 31, 1920.

The Danish kr keeps receding, and £ is to-day quoted at 24.17 and $ at 612.00. On the other hand, Swedish kr keeps increasing the gap between itself and the two other Scandinavian kr, both Danish and Norwegian being quoted in Stockholm to-day at 74.00, and £ is in Stockholm down at 17.95. Marks stand in Copenhagen fairly steadily at about 16.00-16.10, and Dutch gulden are at 217.75.

Denmark's production of butter is approaching the figure of the time before the war, but sincere regret is being expressed at England keeping her restrictions in force, to the detriment of Danish producers and British consumers. In the meantime the United States have come into the market as substantial buyers at advantageous prices, and a big steamer cargo has just been despatched.

Letters to the Editor.

INDIAN CURRENCY AND EXCHANGE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the issue of your valuable paper dated June 26th, I notice, under the above heading, a definite statement, which appears to me to be open to considerable doubt.

You say: "When the transitional period of 21 days is over, the gold content of the British sovereign will thus be exchangeable in India for 10 rupees, or, in other words, the exchange value of the rupee will be fixed in terms of gold—its relation will not be with sterling as hitherto."

If on July 12th the rupee will be worth 2s gold, which is equal to about 2s 4d sterling, how can you explain the fact that to-day it is only worth about 1s 10d? Are we going to have a rise in the rupee exchange of 28 per cent. in 13 days? Please let me have your reply by return of post, so that I can at once buy some rupees and make the profit.

In view of recent experience, it would perhaps be wise to take statements made by the Government of India with regard to exchange with the proverbial grain of salt. If the Government of India do submit a bill at the forthcoming session of the Legislative Council, prescribing a ratio of one sovereign to 10 rupees, as recommended by the Indian Currency Committee, it may not be passed, but if it is passed, they will probably be careful to incur only the liability to give 10 rupees for a sovereign, which is a very different matter from giving one sovereign for 10 rupees.

Does "prescribing" a ratio *produce* that ratio? Perhaps 10 rupees will be exchangeable for a sovereign (in the words of a song which recently attained some popularity in Calcutta) *when we skate on the Hooghly in June*.—Yours faithfully, F. W. S.

The Rectory, Throwleigh,
Okehampton, June 29, 1920.

[If our correspondent will read our statement carefully he will see that it does not imply that the Indian Government would give one sovereign for ten rupees.—ED., *Economist*.]

NATIONAL DEBT AND HIGH PRICES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—On carefully reading Mr H. Beaumont's letter under the above heading in your issue of to-day, it seems to me that in each case in which he gives a reason for a rise in price his argument is virtually, and properly, based on the law of supply and demand, but he does not in any case explain how much rise is required by his argument.

Those who, like myself, apply the law of supply and demand to the aggregate of commodities and that of the legal tender money in which their prices are quoted, say that if the legal tender money be increased from £200 million to £400 million, the effect of that increase is to double the average level of prices.

Does Mr Beaumont suppose that an increase in the quantity of money does not affect prices? His arguments do not seem to touch that point.—I am, Sir, your obedient servant, WM. LEIGHTON JORDAN.

The main purpose of this book is to show in a comparative form the position at the end of each year of the companies dealt with, and to give some information as to their past history. This annual does not profess to deal with the shares of all insurance companies, but only with those in which there is a reasonably free market, and

LEAGUE OF NATIONS

CURRENCIES AFTER THE WAR

A SURVEY OF CONDITIONS IN VARIOUS COUNTRIES

THIS volume on the finances, foreign trade, and exchanges of the principal countries of Europe, Asia and America, has been compiled under the auspices of the League of Nations Secretariat by a number of well-known financiers and economists of different nationalities. It presents a striking picture of the changes which have taken place, as a result of the war, in the world's currencies and balance of trade.

PRICE 7/6 NET.

which have reached such a position of stability as to admit of the calculation of break-up values. Brief particulars, however, of a few of the more important companies floated during the last 12 months are given, and since in the case of these companies much, if not all, depends on the management, a list of the directors is shown with some information as to their connections.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

Ticket.	Account.
July 13.	July 14.

Stock Exchange markets are in cheerful frame of mind. Supported by a little buying on behalf of people who released money which they had kept back for window-dressing purposes at the end of the half-year, prices in the gilt-edged market started to go ahead steadily. This encouraged enterprise elsewhere. Hints of the money stringency being relaxed, and gossip about a possible fall in the Bank Rate, helped the sentiment. A good Bank Statement also assisted. There has been no recurrence of French liquidation. Optimism clings to the idea that on Monday the Government may give way, at least in part, to the clamour against the extra 20 per cent. added in the Budget to Excess Profits Duty. Business throughout the House is certainly more active than it has been of late.

With the turn of the half-year, blocks of gilt-edged securities have ceased to come upon the Gilt-edged market, and it needed but a little public buying to stimulate the list as a whole into noticeable strength. The War Loan has been particularly prominent. Keeping pace with it, the New South Wales scrip, County and Corporation stocks, with a few Colonials have marched steadily upwards. Already, after only a week of demand for such issues, there is a talk of stock being in short supply, and certainly it is easier to sell some of the gilt-edged varieties than it is to buy them. Home Railway prior-charge stocks are no better, and the Indian Railway list continues dull. But otherwise the tone is firmer, and prices have an upward tendency.

Foreign bonds have come in for a share of attention, French issues, as usual, being to the fore in the matter of public interest. The various bonds have improved with the value of the franc. Something of a feature is the strength shown by Venezuela, Guatemala, Uruguay, and other bonds of this class. Argentine, Brazilian, and Chilians remain somewhat in the background. Russians hesitate, and German Threes have not been affected by the preliminary passages at Spa.

The course of the Home Railway market remains disappointing to holders. Digestion of the grouping scheme put forward by Sir Eric Geddes has not made for further investment in the market, and, in spite of the near approach of the dividend season, the tendency has been to let values droop. In Grand Trunks there is nothing doing, and Mexicans on balance have given way. On the other hand, Argentines are quite a good market, showing material gains on the expectation of the October dividends, approximating those paid just before the outbreak of war.

Recovery in the price of rubber to 2s per lb infused a better tone into the Rubber share market, though there is not much business at present, except in the shares of the few leading companies. The Oil market has thrown off much of its heaviness, and prices, under the leadership of the giants of the market, have progressed upwards. The Shell meeting led to fresh buying on behalf of the public. The warning held out by the chairman of the Burmah Oil Company as to a possible diminution in dividend on the increased capital no longer acts as a deterrent to buyers. Burmah Oil, by the way, will be ex dividend next week, and ex rights probably about a month hence. Much of the activity in oil shares is of the professional variety at present. Amongst Shipping descriptions, P. and O. Deferred has gone up with a run; other shares in this market show no animation. The controversy between Baldwins and the Northumberland Shipping Company has made little difference to the prices of either. Vickers gave way on the result of the action brought against the company by Admiral Sir Percy Scott. The Textile market, after being heavy, threw off its depression, and on Manchester becoming a buyer, turned upwards. The Tobacco list is steady, and British Oil Cakes had a sharp spurt. Courtaulds, Dunlops, and other high-priced shares have mostly been on the mend. Industrials as a whole are affected by talk about the possibilities of the Excess Profits Duty being reduced from 60 per cent. There is a good demand for most of the sound Industrial preference shares.

Kaffirs are a firm market, lacking public business. The Randfontein Estates has been awarded judgment for £215,000, plus 6 per cent. interest for 13 years, against Sir Joseph Robinson, who has appealed. June production figures from the Transvaal companies are read as satisfactory. Central mining came in for a smart rise. De Beers dipped to 19 and recovered to 20½ in half a week. Chartered advanced on guesses as to the contents of the Cave Commission report. Paris lent a hand to the buyers. Rio Tintos consequently improved. Other mining markets are tame and unprofitable. Tin, the metal, has risen without influencing tin shares. People are taking no practical interest in mines at present, and even the Kaffir business is mainly professional.

5-15 Year Treasury Bonds, repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. These are still on offer. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

London Housing Bonds.—Registered bonds for £5 each or multiples thereof are obtainable for terms of 5, 10, or 15 years, at applicant's choice. Six per cent. interest and full repayment when due guaranteed by the London County Council on the security of London's rates. Interest payable each September 30th and March 31st. The money will be applied solely for the purpose of housing schemes approved by the Government, and in particular to finance the housing schemes of the Metropolitan Borough Councils. We referred to these bonds in a leader in the *Economist* on June 12th, page 1282.

Corporation of London £5½ per cent. Bonds, 1928.—Issue of £3,500,000 of 5½ per cent. bonds at 94½ per cent. The bonds are secured upon the general rate leviable by the Corporation in the City of London and Liberties, and will be redeemed at par at the Bank of England on February 1, 1928. The proceeds of the issue are required for carrying out the Housing Scheme of the Corporation, and for other purposes chargeable to the City of London general rate. The rateable value of the City of London on April 5, 1920, was £5,808,818, and a rate of 1d in the £ produces about £23,950. The existing loans chargeable on the City rate amount to £1,040,000, but in connection with one of the loans there is a sinking fund amounting to £928,803, leaving a net loan liability of £111,197. Holders of Corporation of London 5½ per cent. bonds, 1928, or fully-paid scrip of the bonds may surrender their holdings at any time on or before July 1, 1921, and receive in exchange therefor holdings of Corporation of London 5 per cent. stock 1945—65, calculated as follows :—In the case of persons surrendering their holdings on or before January 1, 1921, at the rate of £116 stock for each £100 bond surrendered. In the case of persons surrendering their holdings between January 2, 1921, and July 1, 1921, both inclusive, at the rate of £114 stock for each £100 bond surrendered. If not previously redeemed, the stock will be redeemed at par at the Bank of England on August 1, 1965. This is a trustee security.

Government of Victoria 6¼ per Cent. Conversion Loan, 1923-1925.—Issued at par. Offer of conversion to holders of Victorian Government 4 per cent. inscribed stock, maturing October 1, 1920. Principal repayable on October 1, 1925, the Government having the option of redemption, in whole or in part, at par, on or after October 1, 1923, on giving three months' notice. The London County Westminster and Parr's Bank, Limited, is authorised by the Government of Victoria to offer to the holders of £5,949,700 outstanding 4 per cent. stock, due October 1, 1920, conversion at par to the extent of £2,725,000 into Victorian Government 6¼ per cent. inscribed stock. The three months' interest, due October 1, 1920, on the 4 per cent. stock will be paid on that date to holders converting. Any portion of the stock not converted will be paid off at the London County Westminster and Parr's Bank, Limited, on October 1, 1920. This is a trustee security.

Sir W. G. Armstrong, Whitworth, and Company, Limited.—Authorised capital £11,012,500, of which £10,012,500 has been issued. There is also outstanding an issue of 4 per cent. debenture stock amounting to £2,500,000. This is an issue of £2,000,000 second mortgage debenture stock at 95 per cent., carrying interest at 6½ per cent. per annum, and redeemable on or before January 1, 1946. The prospectus states that "the trust deed securing the debenture stock will constitute a specific mortgage on the freehold land and works of the company in England specified in the schedule, and a floating charge on all other assets of the company present and future, subject only to the mortgage and charge created by the power trust deed securing the existing £2,500,000 4 per cent. debenture stock." Unfortunately, however, as the prospectus says, "The accounts for the years 1916, 1917, 1918, and 1919 have not yet been published," and as no mention is made of the value of assets, the investor who selects his securities, on his knowledge of company finance, will be placed in an awkward position. It is true that the amount of issued share capital is to a great extent some guide to the value of assets and that the company has prospered exceedingly during the war. Although the terms are attractive and there is no doubt as to security, it is to be regretted that a company of this high standing should set such an example of reticence in its prospectus.

Rylands and Sons, Limited. — Authorised capital £4,000,000, divided into 2,000,000 8 per cent. cumulative preference shares of £1 each (at present unissued) and 100,000 ordinary shares of £20 each, already issued and fully paid. This is an issue of 1,500,000 8 per cent. cumulative preference shares of £1 each at par. There is no debenture debt, and the articles of association provide that none can be created without the consent of the company in general meeting. The business was founded in 1773, and was registered in 1873 as a limited liability company with a capital of £2,000,000. The business carried on by the company is that of cotton spinners and manufacturers. The company's trade and reputation are world-wide, and it owns warehouses at Manchester, London, and Liverpool, and has branches at Capetown, Sydney, Melbourne, Bombay, Lagos, and other places. Net assets, but including the gross proceeds of the present issue, amount to £4,915,075. Profits are set out from 1909. Calculating the interest at 8 per cent. on this issue, the company could have provided the dividends required — £120,000 — from its lowest previous profits given, which were £202,261 in 1914. The prospectus states that "preference shareholders are not entitled to receive notice of or to attend or vote at any general meeting unless it is convened for the purpose of considering a resolution for the winding-up of the company or for the reduction of its capital, or a resolution directly affecting the preference shareholders as a class, or unless the preference dividend shall have been in arrear for three months or upwards." These shares are well secured both as regards capital and interest. The issue should meet with a good reception from the public.

Fitch and Son, Limited. — Authorised capital £300,000, divided into 150,000 8 per cent. cumulative preference shares of £1 each and 150,000 ordinary shares of £1 each. This is an issue of 80,000 8 per cent. cumulative participating preference shares and 80,000 ordinary shares at par. The company has been formed to acquire the businesses of Fitch and Son, Limited, and Fitch and Son (Export), Limited, wholesale, retail, shipping, and export provision merchants, of London, Liverpool, Southampton, Bristol, Eastleigh. Assets are valued at £226,589. This includes, however, £55,000 for goodwill and £20,000 for trade marks. Freehold and leasehold properties are valued at £57,790. Profits are set out from 1912. The consideration payable to the vendors is £226,589, and is to be satisfied by the allotment to them of 70,000 8 per cent. preference shares, 70,000 ordinary shares, and the balance, £86,589 in cash. The preference shares are a fair offer in their class, but the ordinary shares are only suitable for the consideration of the opulent investor.

Dureleo, Limited.—Authorised capital £300,000, divided into 300,000 shares of £1 each, of which 185,558 shares have been or are to be issued in full satisfaction of the purchase consideration. Applications are now invited for 112,000 shares of £1 each at par. The directors and their friends have agreed to subscribe for 31,200 shares, and to guarantee a total subscription of 51,700 shares. The company has been formed to acquire the share capital of Duram, Limited, Metal Manufacturers, Limited, and Cryselco, Limited, and operate the three businesses under one control. Contracts have already been made for the acquisition of 98 per cent. of the issued share capital of Duram, Limited, 98 per cent. of the issued share capital of Metal Manufacturers, Limited, and 99 per cent. of the issued share capital (apart from what is already held by Duram, Limited, of Cryselco, Limited. Cryselco, Limited, of Kempston Works, Bedford, formed in 1895, manufactures Cryselco lamps, both of Tungsten wire and carbon filament. Duram, Limited, of Hanwell, formed in 1912, manufactures the drawn Tungsten wire used in the electric lamp and allied industries. Until January, 1919, this company carried on a similar business in Molybdenum wire, when this branch of the business was transferred to a new company then formed, viz.:—Metal Manufacturers, Limited, of Hanwell, which manufactures the Molybdenum drawn wire required in the electric lamp industry. Net assets of the three companies, exclusive of goodwill, amount to £187,972, and the purchase-price to be paid for the share capital of the three companies has been fixed at £185,558, payable wholly in shares. Profits are given from 1915, and these are shown before excess profits duty and directors fees have been deducted. The prospectus informs us that "the holders of all the £25,800 convertible debentures have elected to convert their debentures into ordinary and deferred shares of Duram, Limited, and will accordingly receive a proportionate number of shares in Duram, Limited, being part of the purchase consideration," and, further, "that Duram, Limited, has been in litigation with the British Thomson-Houston Company on a patent of 1906 for working tungsten hot, and succeeded in obtaining judgment in the High Court, the Court of Appeal, and the House of Lords, and such alleged master patent was subsequently revoked. As to the result of a somewhat similar action since brought by the British Thomson-Houston Company, no prediction can be made, but the above-mentioned conversion of debentures into shares indicates the view of those most closely in touch with the company's affairs as to the equally successful result of such action." The issue is speculative, and only suitable for the investor with a wide margin of capital and income who can afford to take risks.

Ryder and Son (1920).—Authorised capital £150,000, divided into ordinary shares of £1 each. This is an issue of the whole amount at par. This company has been formed to acquire as a going concern the business now carried on by Ryder and Son, Limited, seed merchants, at St Albans, who are the vendors and the promoters of the new company. The prospectus states that the old company has on its British register the names and addresses of 345,000 customers with whom it is doing business. In addition to this, it has also a large number of customers in Africa, New Zealand, Australia

and the East, and a constantly growing business in Canada and the States. Profits are given from 1913. Assets are valued at £94,000, which sum includes £37,736 as goodwill. The purchase price is payable in cash, but Mr S. Ryder has agreed to apply for 25,000 shares in the new company. Freehold land and premises have been independently valued at £26,340. The goodwill appears to be rather out of proportion to the value of other assets. Though the firm has an excellent reputation for its seeds, the issue must be placed in the speculative industrial class.

Residental Properties Improvement Company Limited.—Authorised capital £100,000, divided into 99,500 8 per cent. preferred ordinary shares of £1 each, and 10,000 deferred ordinary shares of 1s each. The profits of the company which it may be determined to distribute in respect of any year are to be applied (*a*) in paying to the holders of the preferred ordinary shares a cumulative dividend at the rate of 8 per cent. per annum, and (*b*) of the balance to pay 50 per cent. to the holders of the preferred ordinary shares and 50 per cent. to the holders of the deferred ordinary shares. This is an issue of 80,000 8 per cent. preferred ordinary shares of £1 each at par. Shareholders will be given an option to subscribe at par, any time before June 30, 1921, for one of the unissued preferred ordinary shares to every five preferred or deferred ordinary shares held. The company has been formed to acquire properties in the West End of London, and convert them into maisonettes. Properties and assets to be taken over are valued at £18,560, but an independent valuation is given of one property only. It would be interesting to know what the purchase price for No. 36 Queen's gate, mentioned in Agreement 5 in the prospectus, amounts to. It should be noticed that the vendors do not claim to have vacant possession of some of the properties. Providing that the properties are acquired at a reasonable value and that management expenses can be kept under, there is no reason why property-owning companies should not be successful. The trouble with many housing companies in the past has been that property tax is charged on gross rents and no allowance has been made for management expenses.

Bekoh Consolidated Rubber Estates, Limited. — Authorised capital £350,000, divided into 3,500,000 shares of 2s each. This is an issue of 3,000,000 shares of 2s each, of which 2,825,000 are to be issued as fully paid up in payment of the purchase consideration, and 175,000 shares of 2s each are now offered for subscription at par. This company was incorporated on June 24, 1920. to acquire the rubber plantations owned by Bekoh Rubber Estates, Limited, and the Tanah Gemok Rubber Estates, Limited. The estates which this company is to acquire from the vendor companies comprise in the aggregate 3,608 acres, of which 2,250 are planted. The lands are partly situated in Malacca and partly in the Muar district of Johore. The estates are within 30 miles of the town of Malacca, with which they are connected by Government road. It is estimated that of the unplanted area 1,000 acres remain suitable for planting. The sale to this company is being effected in order to amalgamate the estate of the two vendor companies and to provide further working capital. The purchase-price has been fixed at the sum of £282,500, of which £262,500 is payable to the Bekoh Company and £20,000 to the Tanah Gemok Company, and all of which is payable in fully-paid shares in this company. The purchase comprises all the assets of both companies after payment of their liabilities as at July 1, 1920, and after payment of the preliminary expenses of the company, and the estates will be taken over as from that date. This is an issue mainly of interest to the shareholders in the two vendor companies, and will in all probability be well received by them.

Judges', Limited.—Authorised capital £20,000, divided into 13,500 8 per cent. cumulative participating preference shares of £1 each and 6,500 ordinary shares of £1 each. After ordinary shareholders have had the sum of £1,000 distributed out of profits amongst them, 25 per cent. of the remaining profits are to be allocated to participating preference shareholders. This is an offer of 10,000 8 per cent. cumulative participating preference shares of £1 each at par. The company was formed as a private limited company in 1909, to acquire the business of photographic publishers established by the Messrs Judge Brothers at Hastings in 1902. Assets are valued at £11,040, but sundry liabilities reduce this total to £9,241. The whole of the ordinary shares are held by directors, and the prospectus in referring to profits (and losses), which are set out for 1913, states that: "Practically the whole of the above profits have been left in or loaned to the company and used for development and expansion, and in accordance with the powers contained in the company's amended articles of association, the company has recently capitalised a sum approaching £5,000 of the distributable profits, and applied the same in paying an equivalent amount of ordinary shares of the company in full, and the remaining ordinary shares have been paid for by the Messrs Judge, and the 5,000 ordinary shares have been allotted fully-paid up as follows:—As to 2,940 to Mr F. Judge, and as to 2,060 to Mr T. W. Judge. The other ordinary shares represent their original cash holding." A favourable point about the company is, that the owners are taking no money out of the concern. All cash received from subscriptions goes to assist to develop the undertaking. But the company is small, and the prudent investor will consider the difficulties of realising shares in small concerns at a fair price in case of sudden emergency, although a Stock Exchange quotation is being applied for.

Winser's (Tunbridge Wells), Limited. — Authorised capital £20,000, divided into shares of £1 each. There are now offered for subscription 18,500 shares of £1 each at par. The company has been formed to acquire the business of a motor engineer carried on by Mr Bernard Winser at Tunbridge Wells, which has been in existence for the past 12 years under the title of Winser and Co. Assets are valued at £4,509, and the purchase price is this sum plus £500 for goodwill. Of this amount £3,509 is payable in cash. Although, as stated above, the business has been in existence for 12 years, no statement of past profits is given. The remark in the prospectus that "the cars on order and not yet sold can be readily disposed of" is somewhat optimistic, as within a year it is possible that the supply of cars may exceed the demand. The issue is only suitable for consideration by those with some personal knowledge of the directors or promoters. Intending investors should also note our remarks on shares in small companies mentioned in the preceding issue.

A. Boake, Roberts, and Co., Limited.—We have received the following statement from the secretary of A. Boake, Roberts, and Co., Limited, showing how the assets of this company are made up :—

	£	s	d
Leasehold premises at cost, less depreciation	65,254	9	0
Plant, utensils, &c., ,, ,, ...	58,269	16	4
Motor vehicles at cost ,, ,, ...	2,427	7	3

COMPANY MEETINGS, &c.

NATIONAL BANK OF NEW ZEALAND, LIMITED.

INCREASE IN BUSINESS—DOMINION'S PROSPERITY.

The forty-eighth ordinary general meeting of the National Bank of New Zealand, Limited, was held, on the 7th instant, at 17 Moorgate street, London, the Hon. W. Pember Reeves (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said he thought the shareholders would regard them as more than usually satisfactory. The new issue of shares made in July last was fully subscribed, and they were already reaping the fruits of the closer alliance with their friends of Lloyds Bank, Limited. The paid-up capital had been increased from £750,000 to £1,000,000. The reserve fund last year was £730,000. It was now £1,000,000—equal to the paid-up capital—and the proposed further transfer of £20,000 would increase the fund to £1,020,000. The net profit amounted to £256,000, an increase of £70,000, or, including the carry-forward, £321,000, an increase of £90,000 over last year's figures, and this after paying a bonus of £21,600 to the staff.

BANK'S PROSPEROUS POSITION.

The growth in profits was satisfactory and encouraging, and was not in any way the result of over-trading or any reckless anxiety to push business. Though the dividend remained the same as in the previous year, the directors proposed that the bonus of 1 per cent. which the shareholders had received for some years should this year be doubled. The position quite warranted their paying the extra sum involved, although with a still unsettled outlook everywhere the board thought it better to increase the bonus rather than add definitely to the dividend. Some of the shareholders might ask why, in view of the marked and continuous increase of the bank's business, the shareholders were not receiving more than that now recommended. The answer was found almost entirely in three items in the balance-sheet. The first was the amount now paid in taxes, the second and third the sums set aside against depreciation of securities and for premises. These, taken together, amounted this year to something not far short of £200,000. The taxes were a very heavy charge, and until Governments here and in New Zealand cared to face the disagreeable task of drastic retrenchment, taxation was more likely to increase than diminish.

They were setting aside £65,000 against depreciation of securities. Much the greater part of that sum was put aside to balance falls in the prices of first-class Government securities repayable on fixed dates, and unless the Governments to which they had lent the money repudiated their obligations—which was unthinkable—they would in the end receive back from them all they had lent, and in some instances, where they bought at a discount, even more. It was also proposed to set aside £30,000 for expenditure on premises. Lastly, the board proposed to carry forward £69,573—practically a full half-year's dividend and bonus. After very careful scrutiny, they had arranged for a recasting of the salaries of the staffs in New Zealand and London, and the new scales were now in operation. The tide of prosperity which had been flowing in recent years in New Zealand reached a very high mark for 1919-20, and was strikingly indicated by the banking and trade returns.

INFLATION OF CURRENCY.

Inflation of the currency was a much-discussed subject of the day, because of its world-wide occurrence and the disturbing effect attributed to it in the increase of prices. Admitting the evil—an evil which under the universal conditions of 1914-1919 it was, at least, difficult to avoid—it might fairly be said that whatever inflation—that is to say, abnormal increase in the currency—had taken place in New Zealand had been on a scale very small indeed. The present actual circulation was £6,552,000, while in 1914 it was £1,667,000—an increase of £4,885,000. Against this the coin held by banks had increased £2,500,000, due to the withdrawal of coin from circulation and the use of notes in place of it. This made the net increase in currency only £2,385,000. Expanding trade, higher prices, and higher wages would in themselves have made much of this increase inevitable, and when it was further considered that during the last six years the Government raised within the Dominion loans exceeding 60 millions, that the banks' holdings of Government securities increased by over 5½ millions, and that their accumulation of funds in London exceeded 17 millions, it must be recognised that in New Zealand, at any rate, local inflation had been comparatively trifling.

A continuance of such profitable years as the last six could not be expected, and many years might well elapse before they were again equalled. It had also to be recognised that high prices explained the increased value of the exports, for the actual production had shrunk somewhat in volume. Henceforth, the producer would have a free market, yet the majority of producers looked with the greatest confidence on an immediate future free from Government control, and with a full recognition that the only method of counteracting a possible shrinkage in values was to increase production. New Zealand had been an active belligerent, and it was no small reason for congratulation that she was probably suffering less from the effects of the war than any other community which played a long, strenuous, and honourable part therein.

The report and accounts were unanimously adopted.

GRESHAM LIFE ASSURANCE SOCIETY, LIMITED.

"EXTRAORDINARY GROWTH OF NEW BUSINESS."

THE QUINQUENNIAL VALUATION AND BONUS.

The seventy-first ordinary general meeting of the Gresham Life Assurance Society, Limited, was held on June 30th at the chief office, St Mildred's House, Poultry, London, E.C., Sir Charles A. Hanson, Bt., M.P., the chairman, presiding.

The General Manager and Secretary (Mr Alexander Lawson) read the notice convening the meeting and the certificate of the auditors.

The Chairman said:—Gentlemen, my colleagues and I extend to you a very hearty welcome to this our 71st annual meeting, which marks, not only the close of the 71st year of our life, but the close of another quinquennial period. The reports and accounts dealing, as they do, with both the year and the quinquennium, are necessarily extensive, covering much ground and many features of our corporate life. With your permission, therefore, and in order to save your time, I propose at once, without preface, to refer to the report and accounts for the year ending December 31st last. I may say at once it has been a satisfactory year; progress, growth, and added strength being the chief characteristics of the year's work. Probably the most remarkable feature of the year to us is the extraordinary growth of new business secured both at home and abroad, and when I say abroad, I refer, of course, to friendly countries only, all enemy countries being for this purpose eliminated. The total number of policies issued during the year amounted to 6,029, as compared with 3,149 in the previous year, and the sum assured, after deducting reassurances, amounted to £3,324,367, as compared with £1,700,704 in the previous year. These figures are very large, especially when it is borne in mind that we have ceased to take any new business whatever in enemy countries where in pre-war days we had large and successful branches, especially in Austria and in Hungary.

PREMIUM INCOME AND CLAIMS.

The premiums for new assurances completed amounted to £162,777, as compared with £82,468, so that the new premium income for the year has increased by practically 100 per cent., or £80,309. This remarkable feature of insurance experience is not by any means confined to the "Gresham," but is shared, I understand, by nearly all our large British life offices, and not only so, but likewise by insurance companies in other parts of the world. I do not pretend to suggest the reasons or motives which have secured this phenomenally large increase in life assurance, but obviously it suggests a growing appreciation on the part of the public of life assurance, first, as a great protection against death, and, secondly, as a safe and remunerative investment. With reference to the death claims, this year presents a somewhat exceptional record, in that we have had brought into the year the number of deaths which have occured in previous years, but the notification of which had been deferred owing to the war. I need hardly say that owing to war conditions it was inevitable that notifications should be withheld, and that claims should have arisen which from year to year were unknown and therefore unassessable. Now, however, that we are in complete communication with all our branches the work of inquiry and investigation has been going on as exhaustively as possible, and we have reason to believe that all, or nearly all, of any such claims that can arise became known to us during the year, and are included in the year's returns. The deaths which actually occurred in the year, and for which ordinarily the year would be responsible, are within the actuarial expectation, but the excess number of exceptional claims, such as I have referred to, amount to a considerable amount of money, and the total claims which we have thus had to bring into the year are in excess of the actuarial estimate.

The claims on endowments, on the other hand, have been fully known from our records and provided for year by year, and the sum stated in this year's accounts—namely, £518,070, represents the endowments maturing within the year. This means that a very considerable number of policyholders have so far as their endowments are concerned, outlived their period of maturity and have had the full benefit of the assurances which they had effected. The sum, as you will notice, is large, and it means a large amount on the one hand of liability written off and on the other hand of premiums receivable.

THE ASSETS.

The assets as appearing in the balance-sheet amount to £10,660,055, as compared with £11,091,948, which shows a de-

crease of assets of about £430,000, but this diminution is explained by the fact that we have applied the accumulated investment reserve of £399,353, and the contingencies reserve of £80,000, which sums stood in the liability side last year, in the writing down of various investments and other assests of the society, a writing down rendered unfortunately necessary by market depreciation in values over which the society had no influence or control whatever. The result is that the reserves disappear altogether and the investments and other assets at our disposal have thereby and with other appropriations been written down to their market and true values as represented at December 31st last. It affords the directors, as also the management, a very great sense of relief to be able to make this statement with every degree of assurance. I cannot omit here a reference to the next paragraph of the report—namely, that relating to the life expenses, which have increased very materially, and which, in spite of everything we have been able to do, have reached a higher ratio than has been known by this society for many years. Of course, I need hardly point out to you that this is accounted for by the material increase in the cost of labour and material and to the exceptionally large rise in the ratio of new business to the total premium income—viz., 13.23 per cent., compared with 7.25 per cent. in 1918, so that the ratio of new to total business has in 1919 nearly doubled the similar figure for 1918. Had the ratio not exceeded that for 1918 a material reduction in the gross expense ratio would have been the result. The tendency of increased cost is constantly upward, not only indeed in this country, but equally all over the world, or at any rate in every country in which this society is doing business, and therefore although we much regret this abnormal expense ratio, and are doing everything in our power to limit it, yet with the best intentions in the world it cannot altogether be checked, and is attributable largely to conditions and economic laws of which we are the servants rather than the masters.

RATE OF INTEREST EARNED.

The net rate of interest realised by the funds—that is, after deduction of income-tax—is £4 1s 5d per cent., as compared with £4 1s 1d—a slight increase. It is true, of course, that recent investments have been obtainable to yield a much higher gross rate, but it must always be borne in mind that a society like our own can only take advantage of these higher interest rates as existing securities mature or are paid off, or as surplus funds may be available, so that the higher current rate recently, and now, obtainable can only apply to a small percentage of an assurance society's funds, and has to be averaged with the larger percentage of investments made when 3 per cent. Consols stood at 112, for example, and when all sound investments yielded a much lower rate of interest. Income-tax also is, I need hardly point out, a growing factor of grave importance, as at the present rate it constitutes a very serious charge indeed upon your revenue, and therefore upon your profits. This, however, in some form or other, is a charge with which inevitably we shall be face to face for many years to come. The National Debt, owing to the frightful war from which we have just emerged, has grown to inconceivably large dimensions, and the fixed charges thereupon, both interest and sinking fund, the country is bound to provide for. This can only be done by taxation, direct or indirect, or both, and although we may differ, and do differ, very widely concerning the best methods to be adopted to accomplish this purpose of liquidation, yet the fact itself remains that the charge is there and must be provided for. I venture to think myself that the present proposed Budget as submitted by the Chancellor is a very heroic effort in this direction. Whether it is in all respects a wise effort, a too pretentious effort, and whether the charges imposed and to be imposed are greater than the country can be reasonably at the present moment asked to bear, is a question upon which differences of opinion may justly prevail, and concerning which I prefer not, in an assembly like this, to dogmatise, or even to express my own opinion.

ACTUARY'S VALUATION REPORT.

I think I may now turn, with your permission, to the report of the actuary dealing with the valuation of the liabilities and assets of the society, and the recommendations made by the actuary to the directors, which recommendations we have found it right to adopt and to recommend to you for your authorisation. As I understand it, an actuarial quinquennial valuation is an actuarial or mathematical and scientific calculation of the liabilities and assets of the society at a given period, the period in this case being December 31st last, and the difference between the two totals—namely, of liabilities and assets—represents either a deficit or a surplus, as the case may be. In this case the actuary, as the result of his investigation, certifies a surplus amounting to £266,140 10s 3d, which is the net trading profit of the quinquennium, and this surplus my colleagues and I have decided must be distributed in accordance with the rules and regulations of the society. A sum of £5,594 10s must therefore be set aside to provide for the payment of interest to the shareholders at 5 per cent. per annum during the next five years, leaving a sum of £260,000 for division between the shareholders and the participating policy-holders in the proportion of 1-10th to the shareholders and 9-10ths to the participating policy-holders, in complete accordance with our rules and regulations. The surplus is not a vast sum. We should, indeed, like it to have been much greater, but we have been passing through years of exceptional difficulty known to all of you, and known, indeed, to the world at large—years of exceptional difficulty not only as applied to this company and to this country, but equally to all similar companies and to all countries, and having regard to the enormous complexities we have been called upon to contend with, the interruption of all normal activities, the appalling loss of human life, the colossal expenditure of wealth in unproductive directions, and for death and destruction rather than for life and production, I think we may congratulate ourselves upon the results we are able to show. It may be said, indeed, that under all these circumstances it would be better not to divide any portion of this surplus, but to retain it for the strengthening of the resources of the company. There is force in that argument. I fully admit it, but the claims of present policy-holders, and the smaller but equally just claims of shareholders, constitute an appeal which cannot be justly ignored, and in view of the assurances we have received from the actuary and the management concerning the present position and future prospects of the society we have no doubt that the decision which has been reached is a right one. In connection with this valuation the actuary's report is couched in lucid terms, and such as you will be able to fully understand.

ASSETS IN FOREIGN COUNTRIES.

I think, therefore, I need not refer to it further except to deal for a few moments with one point only—namely, that of our assets in foreign countries. As you know, we have been doing business for many years in France, Belgium, Holland, Italy, Spain, Austria, Hungary, Greece, Argentina, Egypt, Scandinavia, as also, of course, in India, Canada, and South Africa, and, up to a few years ago in Germany. This has involved the investment of capital to a considerable extent in a number of the countries concerned, and investments necessarily made in the currencies of the countries affected. For reasons which will be apparent to most of you, our accounts and records relating to business in foreign currencies have hitherto always been converted into sterling at a fixed standard rate of exchange, and as this plan has been applied to assets and liabilities alike, and further, as it has been the general practice of the society to maintain in most countries investments roughly equal to the local liabilities, the net result of this method of calculation was in pre-war times almost the same as if actual current exchange rates had been used, and if it occurred that any difference was found to exist, then such difference was allowed for in our quinquennial valuations. In view, however, of the very abnormal rates of exchange which have prevailed in many countries during and since the war, it was obvious that this plan would necessarily involve special difficulties on the present occasion. On the other hand, it was quite impracticable to present our accounts, and particularly the actuarial valuation figures, at current rates of exchange, while, on the other hand, it was impossible to ignore the enormous variations which were shown in some of the currencies. The matter was a difficult one, and I need hardly assure you we have spared no pains in dealing with the question in such a manner as to exhibit an accurate view of the real position of the society and of the reliable character of the profit shown. We are, therefore, on the advice of our officers, and with the approval of our auditors, presenting our report, revenue account, and balance-sheet in the usual form—foreign currencies being calculated at their pre-war exchange rates; but, in addition, as you will have seen from the actuary's report, a complete valuation of both assets and liabilities has been made in each separate currency—a very laborious undertaking—and the results have been converted into sterling at the current exchange rates ruling at December 31st last. It is on the basis of this valuation that our surplus has been arrived at. I need only add that we believe our calculations have been made on safe and prudent lines, and that had we been able for the valuation to adhere to pre-war exchange rates, a larger surplus would have been shown.

THE SOCIETY'S PROSPECTS.

Concerning the future, I can only say that we are hopeful and confident. The position of the society we believe to be stronger to-day than it has ever been. Business continues to come our way in unprecedented volume, and we are looking forward to the quinquennium upon which we have now entered as one of great prosperity. The German business, which has been in liquidation for some years, is pursuing a perfectly natural course, and will in a comparatively short time be finally wound up. So far as we are aware, no serious difficulties have been put in our way, and I

am pleased to say that justice has been meted out to us in one of the higher Courts of Germany to which we took on appeal a case which in the lower Court had been decided against us. We have given very careful consideration to the question of continuing business in Austria and Hungary, where for many years we have worked in harmony with the people and with great success, but we have reluctantly come to the conclusion that, so far as we are at present advised, the best interests of the society will be served by withdrawing from those countries, and arrangements are therefore being made for the liquidation of our business both in Vienna and in Buda Pest. In this connection, it is, I think, but right I should say that during the period of the war our local advisory committee in Buda Pest, composed of Count Geza Andrassy, Count Batthyanny, and Dr Von Gerenday, have not been unmindful of our interests, and we are greatly indebted to them for the just and impartial manner in which they have sought to do what they consistently could for the protection of Gresham interests. I feel that our thanks are especially due to these gentlemen for their attitude in very trying conditions. I desire now publicly to give expression to that sense of obligation in addition to a formal resolution of acknowledgment which has been adopted by the board and has already been forwarded to the gentlemen whose names I have mentioned. In closing, I should like to say how glad and thankful we are that all our staff have been demobilised, that they have returned to us, that they have been reinstated, that they are discharging their duties with fidelity as of old, and that we are once more a reunited board, management, and staff. We realise fully that we are charged with grave responsibilities to policyholders, shareholders, and the management and staff of the company, and I am glad to be able to acknowledge with gratitude the sympathetic and happy manner in which the staff also have realised their obligations and are working together with us, a united body, for the purpose of building up the interests of the society. Gentlemen, I will not detain you longer, and I now move, "That the directors' and auditors' reports be approved and adopted."

The Deputy-Chairman (Sir Reginald MacLeod, K.C.B.), in seconding the resolution, said the old Gresham Society had passed through the stormy times of the last five years, and had come out not only uninjured, but in a fit condition for fresh and prosperous voyages.

No questions being asked, the resolution was put to the meeting and unanimously carried.

The Right Hon. Lord Monk Bretton, C.B., in proposing a vote of thanks to the chairman for presiding, said that during the difficulties and anxieties of the past few years it was the chairman who had had to bear the burden and heat of the day. In looking at their assets set out in the balance-sheet, they must never leave out of account that one of the greatest assets of the "Gresham" was the chairman, Sir Charles Hanson.

The vote was unanimously accorded.

EXPLOSIVES TRADES, LIMITED.

SUCCESSFUL RESULTS—NEW INTERESTS ACQUIRED.

The ordinary general meeting of Explosives Trades, Limited, was held, on the 6th instant, at Winchester House, London, Sir Harry McGowan, K.B.E. (chairman and managing director), presiding.

The secretary (Sir Josiah Stamp, K.B.E.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said: You will have seen from the accounts and the report that the sums received by us as dividends from our constituent companies out of their trading results for the two years 1918 and 1919, after deduction of income-tax, give us a net balance from our profit and loss account of £1,655,241. A dividend of 9 per cent. was paid on the ordinary shares in July of last year, out of the dividends received for the year 1918, and after meeting the dividend charge upon the preference shares for 1919, we are able in respect of the trading of 1919 to propose a dividend of 10 per cent. on the ordinary shares, and 5 per cent. on the deferred shares. If you authorise these dividends and also the writing off of the whole of the preliminary expenses, we then carry forward £231,472 to the next account. The amount of this carry forward does not represent the full surplus from the trading of the companies forming the merger, as the whole of the profits made since the date as from which the merger took effect have not been declared as dividend, substantial sums remaining with the constituent companies. It will be observed from the balance-sheet that the excess of the total of the investments over the share capital allotted is met by loans from the constituent companies amounting to £845,632, while the sum due from the companies to Explosives Trades, Limited, £753,588, covers the dividends due from them and not paid as at the date of the balance-sheet, our available cash resources being left with these companies as far as possible until actually required by us.

I may perhaps here refer to certain comments in the Press to the effect that our assets should be written down because the capitalisation was upon the basis of the inflated values of the war period. Such a statement shows a complete misapprehension of the facts. All pre-war plant and buildings were fully and systematically written down to arrive at the basis. To-day's values of these assets are undoubtedly far in excess of the resultant book values. War extensions were taken at one-fifth of their cost, and met by the issue of deferred shares, while the goodwill was computed entirely upon pre-war results, so that we are merged on a very conservative basis.

The accounts before you and the explanations given will, I hope, satisfy you that the results achieved in those difficult two years have been of a satisfactory character, and reflect the greatest credit on our management. There are many other matters, such as finance, insurance, advertising, buying and selling, which have been brought under the central control and co-ordination, and the process is going on continuously; but for the full realisation of our plans for central organisation we are, unfortunately, compelled to wait until the completion of our London offices. The temporary accommodation which we have so far secured has been quite inadequate for the purposes of a completely co-ordinated and centralised administration. You well know the difficulty of obtaining suitable office accommodation on the scale required by us, and we have been fortunate in obtaining the 40 years' remainder of a lease of Buckingham Palace Hotel, which is now undergoing alterations adapting it to our requirements, and which we hope to occupy in the course of a few months. The staff have been greatly handicapped by the conditions under which their work has had to be done, and they deserve all commendation for the way in which they have surmounted their difficulties.

NEW ENTERPRISES.

You will appreciate that our problem did not consist solely of the ordinary one of re-establishing our peaceful pre-war industries, but it was complicated by the necessity to find new outlets and fields of employment for the capital rendered unproductive by the war's termination, and for stabilising our business as a whole. We studied very fully the transport industry, and, as the result of our deliberations, considered this held out attractive prospects for us. We decided about two years ago to become interested in that industry by acquiring a substantial block of shares in the Dunlop Rubber Company on advantageous terms. So far we have had every reason to be pleased with the results of that investment. As you are aware, it is the premier company of its kind in this country and possesses a wonderful name throughout the entire world. In addition to acquiring a large interest in the Dunlop Rubber Company of England, we also took a substantial holding in the Tyre Investment Trust Company, which controls the shares of the Dunlop Rubber Goods Company of Canada and the Dunlop Far East, but which are in no sense in competition with the English company. Some time ago an American Dunlop Company was formed, in which we are also financially interested, and, after a close study of the conditions surrounding the tyre trade, it was decided to erect a factory at Buffalo, U.S.A. These works are now being installed under the direction of the technical experts of the Dunlop Company, and it is expected that early next year the factory will start operating. As the American company are working to the Dunlop Company's formulæ, they should avoid the usual experimental difficulties, and the tyres produced by that factory should at once correspond in quality to the latest tyres produced in England, of course, giving due regard to the special needs of the American market. Some time ago we acquired a substantial interest in Rotax Motor Accessories Company, the results of which, I am glad to say, have already been of a most satisfactory character.

There has for some time been a considerable output of cycles from Kynoch, Limited, which are now finding wider markets than hitherto, and during the past year we have acquired John Marston, Limited, the manufacturers of the world-famous "Sunbeam" cycle and of the motor-cycle, which continues to achieve remarkable records in open competition with every description of motor-cycle. We are directly and indirectly concerned in the manufacture of carburettors, radiators, and other articles connected with the production of passenger and industrial vehicles.

MOTOR-CAR PRODUCTION.

Your board have also given considerable thought to the question of motor-car production. Four years ago the Dupont Company of America, which corresponds in the States to your own company in this country, and with which we have had pleasant business relations for many years past, decided to become partners on a substantial scale in the General Motors Corporation, Limited, of America, the premier motor manufacturing concern in the world, having a total capital to-day approaching £100,000,000. As a result of exhaustive inquiries and personal visits to the factories of the General Motors Corporation in America, negotiations were concluded about two months ago by which we also became partners to the extent of, approximately, $25,000,000, on very favourable terms, which, even on to-day's revenue of the company, without increased capital, will be highly remunerative. I am convinced

that, in deciding to become allied with them in this great industry, we have come to the right decision for your company, and this view is confirmed by the fact that about a fortnight ago the great house of Pierpoint Morgan decided to take a large interest in the same company.

We are also substantially interested in the British Dyestuffs Corporation and the British Cellulose Company, in both of which concerns the Government are also shareholders. Here, again, I think the prospects are good. In the Cellulose Company we have excellent prospects of extending the chemical trade of the country in new directions. For some years past one of our companies has been a minority shareholder in the British Pluviusin Company, of Manchester, a concern making artificial leather of high quality, and recently we acquired the whole of the shares of that company. The prospects of artificial leather are almost illimitable. Not only is this material being used to-day in the covering of motor-cars, but its use for household purposes is extending rapidly, and we consider that this purchase will prove to be a very remunerative one.

THE COMPANY'S ACTIVITIES.

Broadly, our activities may be divided into two branches—namely, the chemical division and the hardware or metal division. In the first is embraced the manufacture of industrial explosives for gold-mining, coal-mining, &c., sporting powders, acids, chemicals, candles, gas mantles, electric bulbs, collodions, varnishes &c., &c., and on the metal side we have sporting and other ammunition, and the production of all kinds of metal goods and hardware, motor accessories, metal powders, welding, and other ramifications therefrom. It would be impossible to give you within the compass of a speech a record of all our activities in detail, but what I have outlined above represents our principal branches. We are not standing still, but I would like to assure our shareholders that we have no intention of dissipating our energies in too many directions, or, in other words, of finding ourselves incapable of looking after our various industries and investments. We have given continuous consideration to the restoration and extension of the world-wide trade in industrial and mining explosives, fuses, detonators, and allied products. To this end the company's representatives have been engaged in careful inquiries in all parts of the world, but more particularly in Australia, New Zealand, India, South Africa, and South America. The Canadian markets are looked after by that highly successful company, the Canadian Explosives, Limited, and our large interests in the United States, in South Africa, and in South America are watched over by special departments located, under the charge of highly qualified representatives, in those countries. Your board are optimistic as to the prospects of the company. Our range of activities is, and will be, of such a character that we are confident that if any particular branch has a setback, the other lines in which we are engaged will ensure the stability of our undertaking.

Sir George J. Smith (deputy-chairman) seconded the resolution, which was carried unanimously, and the usual formal business terminated the proceedings.

HOWARD AND BULLOUGH, LIMITED.

LARGE EXTENSIONS OF WORKS TO MEET DEMANDS.

The twenty-sixth annual ordinary general meeting of the shareholders of Howard and Bullough, Limited, was held at Globe Works, Accrington, on the 7th instant, at 12 o'clock noon. The chairman of the company, Sir George Bullough, Bart., presided.

The reports of the directors and auditors and balance-sheet were taken as read.

In moving the adoption of the reports and accounts, the Chairman said: "When we met twelve months ago we were in the midst of a transition period, and were confidently looking forward to carrying on the reorganisation of our textile machinery manufacture without interruption. This was not to be, for last September the unfortunate 'Moulders' Strike' broke out and affected all engineering works in the country. It lasted 18 weeks; but many more weeks were afterwards involved in retrieving the position we had reached in September. A serious disruption of this kind is very unsettling, and fully six months of the year now under review were thus badly hit. It threw in arrears many of the early-war contracts we still had on the books, and carried them into a period of manufacture when costs had become abnormally high through ever-increasing wages, prices of fuels and materials. The reaction thus produced is reflected in the balance-sheet before us.

"The amount disposable is £128,217. A considerable portion of this amount, it should be noted, has accrued from our investment returns. It is proposed to pay the usual 10 per cent. dividend on the ordinary shares, and after payment of the preference dividends and debenture interest there remains a balance of £57,207, which we propose to carry forward to next year's account.

"In order to cope with the ever-increasing demand for our machinery, and also to compensate for the present reduced output capacity caused by the shorter working weeks, additional holidays and other labour conditions, your directors have felt it incumbent upon them to undertake considerable extensions to the works. For this purpose the entire timber storage and drying plant has been removed to a convenient plot of land owned by us in proximity to our Charter street works, and close to the railway. The large space thus rendered vacant will henceforth be occupied by a four-storeyed building now in course of erection. When completed, this, and an additional foundry to be erected on land owned by us and situated opposite the Charter street works will constitute one of the most important extensions ever undertaken by your firm. It will enable us to get back to our pre-war production, for which our present buildings and plant are no longer adequate, owing to the circumstances already referred to. It will also afford provision for much additional labour, enhance our output capacity very materially, and place us in a position to meet the constant offers of business which have now to be declined in consequence of an overburdened order book. In conclusion, I may add that your directors look forward with every confidence to the coming year, so as we may have regular continuity of working. I now beg to move that the reports of the directors and auditors as presented in the balance-sheet be allowed and passed."

Mr A. Haworth seconded, and the resolution was carried.

Mr R. W. Bugler moved that a dividend be paid for the half-year ending May 31, 1920, at the rate of 6 per cent. per annum, less income-tax, on the preference shares; and a fourth quarterly dividend of 2½ per cent., less income-tax, on the ordinary shares, making, with the interim dividends already paid, 10 per cent. for the year on the ordinary shares.

Rev. R. H. Lyall seconded, and the resolution was carried.

Mr S. W. Wilkinson proposed the re-election of Mr James Bancroft, M.B.E., and Mr George Bootheway as directors of the company.

Mr W. D. Smith seconded, and the resolution was agreed to.

Mr W. A. Walsh proposed the re-election of Messrs John Adamson, Son, and Co., of Manchester, as auditors of the company, on the same terms as before. Mr D. C. Dewhurst seconded, and it was agreed to.

Mr D. C. Dewhurst moved, and Mr S. W. Wilkinson seconded, a vote of thanks to the chairman and co-directors.

Sir George Bullough responded, and the meeting terminated.

P. AND O. BANKING CORPORATION, LIMITED.

BUSINESS STARTED—PROPOSED NEW BRANCHES.

The statutory meeting of the P. and O. Banking Corporation, Limited, was held, on the 8th instant, at 122 Leadenhall street, London, Lord Inchcape (the chairman) presiding.

The Chairman said that the issued capital of the company was £2,500,000, and it had all been paid up with the exception of some £40,000. They had begun business, having secured premises in the P. and O. offices in Leadenhall street. All their friends had rallied round them, and they had already opened a very satisfactory number of accounts. They had secured a very efficient staff. He had known the secretary, Mr Rolt, for many years, and had complete confidence in his ability and zeal. Mr James Mackenzie was their managing director, and they had a board consisting of business men. He was convinced that in the course of a little time they would be able to build up a reasonably good business. It was intended to open branches in Calcutta, Bombay, Madras, and Karachi so soon as staffs could be organised. They had already done a good deal of business in one way and another, and it had been decided that their first financial period should terminate on September 30, 1921, which would make it some 15 months. They thought that was desirable, as they had only commenced business within the last fortnight. The decision to form the P. and O. Banking Corporation was come to in January of the present year, but the Chancellor of the Exchequer requested those who intended to bring out new issues to postpone them until the Exchequer Bonds were out of the way. The directors at once fell in with that proposal, and announced that they had decided to postpone the issue of the corporation until about April.

In the meantime, it was proposed in the financial resolution to increase the stamp duty on new issues from 5s per cent. to 20s per cent., and that resolution would hold good unless upset by the Finance Bill. He (the chairman) still hoped that relief would be given in such cases in the Finance Bill. If they had to pay 20s per cent. it would represent something like an additional £37,500. Their relations with other banks were of the most cordial character.

Sir Richard V. Vassar-Smith, Bart., D.L., seconded the adoption of the statutory report, and it was unanimously carried.

The Chairman expressed the hope that when they met again, probably in about 16 months' time, the directors might be able to present a report which, though it might not announce the payment of a big dividend, would at any rate recommend one which would be fairly satisfactory.

SMITHFIELD AND ARGENTINE MEAT COMPANY, LIMITED.

YEAR'S RESULTS—CANNED MEAT INDUSTRY'S POSITION.

The eigtheenth ordinary general meeting of the Smithfield and Argentine Meat Co., Limited, was held on the 8th instant, at Winchester House, Old Broad street, London, Mr P. J. Poels (chairman of the company) presiding.

The Secretary (Mr F. A. Dawnay) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and Gentlemen,—I presume you will take the report and accounts as read. The balance standing to the credit of profit and loss account, in addition to the carry forward from the previous year of £9,664 11s 10d, amounts to £116,470 16s 8d. From this sum has to be deducted interim dividend at the rate of 10 per cent. per annum, free of income-tax up to 5s in the £, paid in October last, amounting to £31,250, also preference dividend at December 31st last, amounting to £25,183 12s 11d, leaving an available balance of £60,037 3s 9d. It is proposed to make the following appropriations:—To put to general reserve £20,000, and to pay a final dividend of 2½ per cent., being at the rate of 5 per cent. per annum, less income-tax at 6s in the £. This absorbs £15,625, and leaves a balance to be carried forward of £24,412 3s 9d. The profits earned by the company on the frozen meat business for the year were satisfactory. As you are aware, during the period of the war this company developed a large business in canned meats. There was a fall towards the end of the year in the market prices of these goods, in which the company had done a very substantial business and is holding considerable stocks.

It had been generally thought that a large trade would develop with the Continent in meat products generally, and there is no question that this would have been the case but for the fact of the fall in the values of the exchanges in the Continental countries; also the corresponding difficulty of these countries to find sterling with which to pay for the goods they so urgently required. However, several large transactions were carried out to meet the Continental requirements, the bulk of these sales being made for cash, and in others terms of credit having been arranged, and the credit risk has been largely covered by insurance. Since the date of the balance-sheet the current market prices for canned meats have been further reduced, and although there has been a considerable amount of inquiry for them sales have been disappointing. It is principally on account of the canned meat position that the directors have felt it advisable to propose the smaller final dividend on the ordinary shares of the company.

ARGENTINE CATTLE PRICES.

Cattle prices in the Argentine have held fairly steady throughout the year, although at a high figure. There seems a tendency at the present time towards slightly lower cattle prices. The camps in the Argentine are in good condition, and there appears to be no lack of animals of prime quality suitable for our purposes. Mr Lambe, who has been works manager for the company since it was formed, retired in January last, and carried with him the good wishes of all those who have worked with him for so many years, including your directors. Mr McCann, a gentleman who has had many years' experience of the pastoral and freezing industry in Australia, has taken up the position vacated by Mr Lambe, and the directors have every reason to think that he will prove to be a capable and efficient person for that position. The company has, since the date of the last meeting, taken an interest in a freezing works at Punta Arenas, in Patagonia. Mutton is the principal item shipped from that part of the world, and the output of frozen mutton and lamb from these works for the present year has been purchased by his Majesty's Government. During the year Mr Miller paid a visit to South America and inspected your company's interests there, and had the advantage of discussing all matters of interest with the local committee and management out there.

You are probably aware that the Government control has been taken off English meat as and from the 5th of this month. So far as Argentine meat is concerned, this has been decontrolled for some time, except in so far as the existence of a maximum price is concerned. The company's frozen meats have realised throughout the maximum prices allowed, and have continued to give every satisfaction. The trading results for the present year have been satisfactory, so far as frozen and chilled meat are concerned, but the sales of canned meat have not been satisfactory. We hope, however, that with the many millions of people on the Continent, undoubtedly extremely short of food, we may see an improvement in the demand at any time. I now beg to move:—"That the report of the directors produced, together with the annexed accounts for the year ended December 31, 1919, duly audited, be received, approved and adopted." I will call upon Mr Kaye to second the motion, and if any shareholder would like to ask any questions I should be very pleased to answer them.

Mr F. Kaye seconded the motion.

SHAREHOLDERS' QUESTIONS.

Mr Ganz asked the chairman for an explanation of the difference of £84,000 between the amounts standing in the balance-sheets for the year under review and the previous year respectively against the item, "By manufactories, buildings, plant, machinery, twin-screw vessel, 'El Zarate,' &c." "Plant and general stores at works, &c.," showed a fall of £399,000, and the amount put down for office fittings had doubled. War Loan investments, £179,000, no longer appeared on the balance-sheet.

Mrs. Thomson Price expressed the opinion that the year had been an exceedingly disappointing one for the shareholders, who received a diminished dividend, while other companies of a like character were doing well. She desired to know what had become of the £179,431 which figured in the balance-sheet last year as having been invested in War Loan, and expressed the hope that no companies would go in for that kind of investment until the Government was pledged to a policy of economy instead of excessive and criminal waste. She thought that if the directors received any commission in addition to their fees, the amount should be shown in the balance-sheet.

MR. MILLER'S REPLY

Mr H. T. Miller (managing director), in reply to the questions, said that a great part of the difference of £84,000 was due to additional expenditure on and equipment of works, &c. Part of this was for fire-prevention appliances, which considerably reduced insurance premiums. The reduction in the item plant and general stores at works was in respect of materials used during the year. During the war they were, perhaps, the largest contractors to the Government for canned meats, and had necessarily to hold very large stocks of material. The increase in office furniture and fittings was due to assets in the Argentine. The War Loan investment was sold in March last year, before the heavy fall which had since taken place, and there was practically no depreciation. The money received for it had been utilised in the ordinary way of business. As to the prospect of improved results from the increased capital, the directors were all doing their best in the interest of the company, but it had to be remembered that the business was a speculative one.

The Chairman pointed out that at the close of the war it was hoped that the company would do a large business with various European countries, which, having little or no cold storage, required canned meats. Those countries were in dire need, but the rate of exchange was so adverse, and they had not the money to pay for the goods.

Mrs. Thomson Price expressed dissatisfaction with the reply she had received to her questions, and suggested the appointment of a consultative committee.

Mr John C. Gibson deprecated this course as being quite unnecessary. No one could have foreseen that the countries of Europe would have been so exhausted after the war, or that the great factor of exchange would play such an important part in regard to commerce generally. He had known the company from its earliest days, and he thought that after the explanations of the chairman and the mnaaging director the shareholders should support the board.

Mrs Thomson Price then withdrew her proposal, and the motion was carried unanimously.

A resolution was passed declaring a final dividend of 2½ per cent., being at the rate of 5 per cent. per annum (less tax at 6s in the £) for the half-year to December 31st last.

The retiring director (Mr T. Lloyd) was re-elected; the auditors (Messrs Deloitte, Plender, Griffiths and Co.) were reappointed, and the proceedings terminated.

SIAMESE TIN SYNDICATE, LIMITED.

DEVELOPING THEIR NEW PROPERTIES.

SYNDICATE'S PROSPECTS.

The thirteenth ordinary general meeting of the Siamese Tin Syndicate, Limited, was held, on the 8th instant, at Winchester House, London, Mr Wm. H. P. Stevens (the chairman) presiding.

The secretary (Mr Chas. A. Underwood, F.C.I.S.) having read the notice convening the meeting and the report of the auditors.

The Chairman said: Gentlemen,—With the directors' report there has been circulated a report by Mr J. M. Milne (who, in the absence of Mr H. G. Scott in this country, has been acting general manager in Siam), to which are appended reports by Mr T. R. Weir, acting manager of the Ngow estate, and Mr H. B. Wall, chief assistant engineer. These reports enter into detailed comparison with the results of the previous year's working, and it is therefore unnecessary for me to trouble you with any repetition of the facts and figures that are given therein. The year covered by the accounts has been one of steady development, so far as

production at Ngow has been concerned, and of great variation in prices realised on the sale of ore, and consequently in amounts payable and paid in royalties to the Siamese Government.

PROFITS AND DIVIDENDS.

As will have been noticed in the directors' report, the net profit from the year's working amounted to £34,159 8s 2d; the two interim dividends of 10 per cent. each paid in April and December, 1919, absorbed £24,000, and left a balance of £10,159 8s 2d, which, added to the amount carried forward from the previous year, leaves a balance at the credit of the profit and loss account of £12,912 15s 10d to be dealt with at the present time. Out of this sum the directors recommend that a final dividend of 5 per cent., absorbing £6,000, be declared, leaving a balance of £6,912 15s 10d to be carried forward out of which to provide for any excess profits duty that may be held to be assessable and for any corporation or other tax that may be imposed by the new Finance Act. I may mention in this connection that Mr H. G. Scott, the general manager, who is now on his way back to Siam, is of opinion that the time is approaching when we may be able to sell to advantage the Bak-Bina plantation, the larger of our two plantations, and that it is also his opinion that it is advisable that the company should, for the present, at any rate, retain the plantation at Ngow, not only because of the prospective value of its produce, but also because, for its upkeep and cultivation, there has been established there a village community of the class of labour suitable for this work, and from which coolie labour can be recruited for any works at Ngow or in the district for which the company may want it.

Since the date of the accounts the first important step has been taken towards reaping the harvest that we have been preparing for, by bringing into profitable operation some of the properties that have been prospected, proved by boring, and acquired in recent years. To open up and work the Bangrin property, we floated the Bangrin Tin Dredging Company, Limited, in January last, with a capital of £170,000, and this company received as purchase price for the property the sum of £10,000 in cash and £40,000 in fully-paid shares. These shares will, it is anticipated, bring in a satisfactory revenue for many years to come. I may mention, in passing, that this issue was a great success, the shares offered being subscribed many times over.

RATROOT PROPERTY.

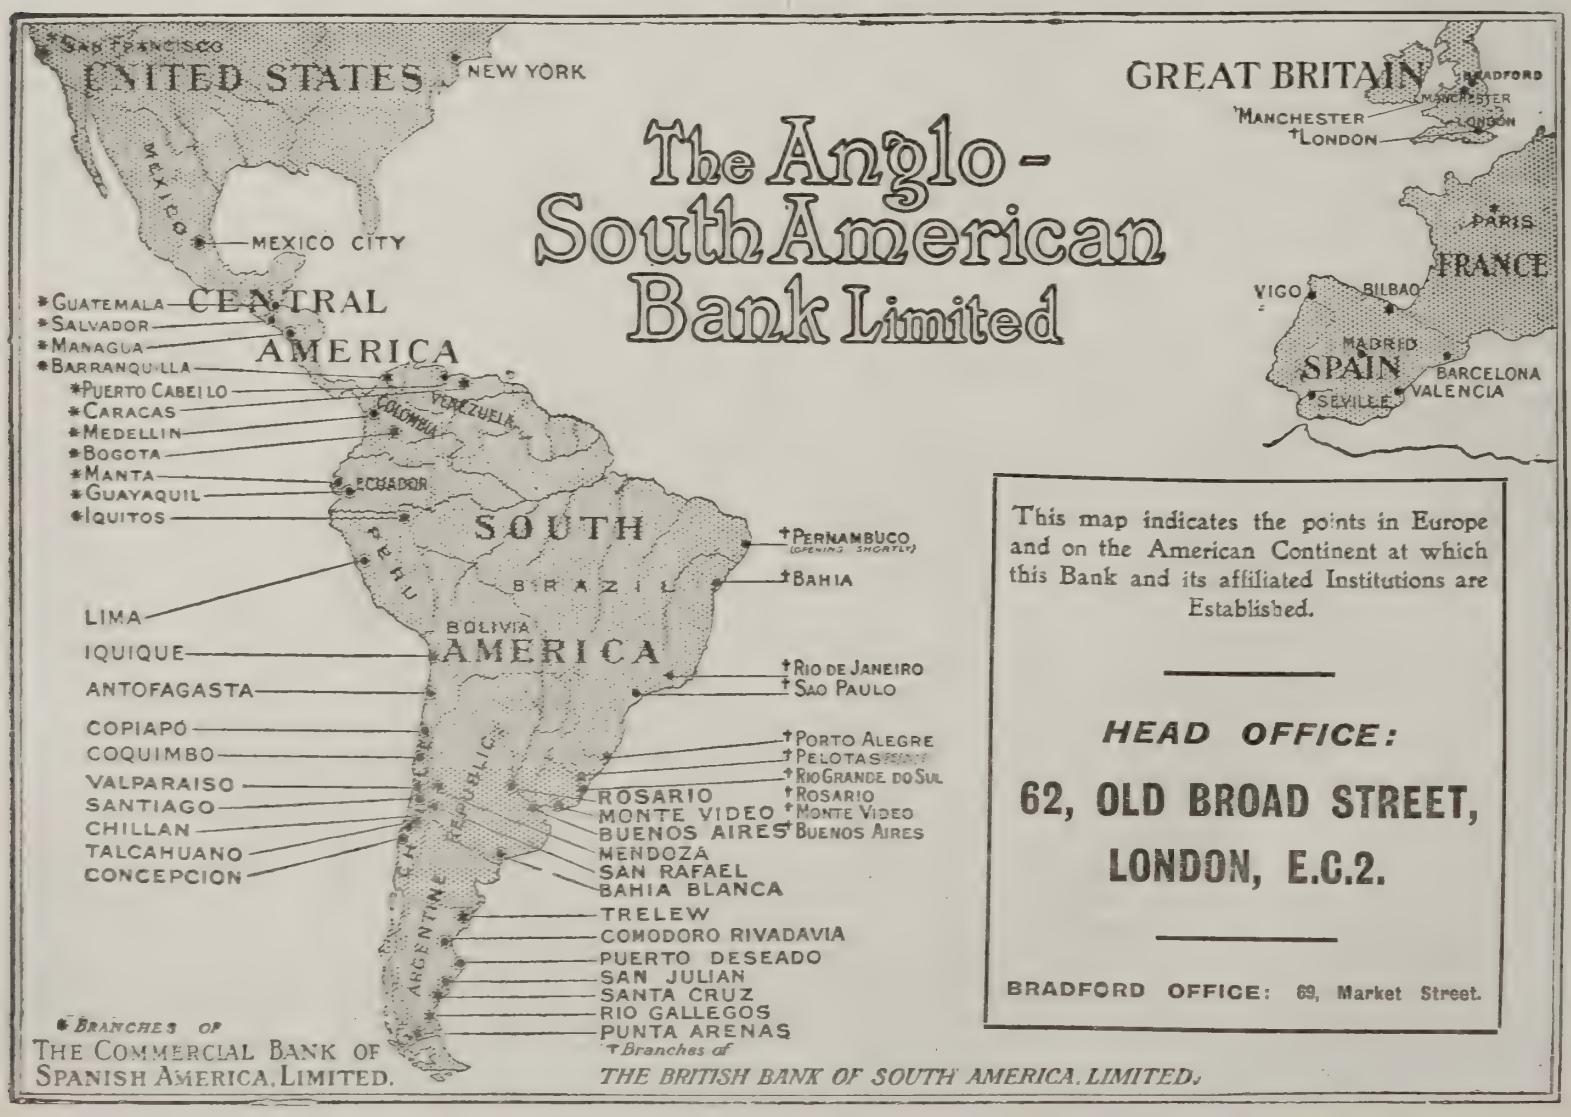
In another case, that of the Ratroot property, for which we had contemplated the promotion of another company under a similar arrangement, we were approached by an Australian company which is already operating a dredge in adjoining ground, and, as a result of negotiations, we have agreed to assign to that company our Ratroot leases in exchange for a substantial holding of fully-paid shares, that company, on its part, undertaking within 12 months to place a second dredge on the combined properties. We have another property—a larger one—which will require at least three dredges (referred to in Mr Wall's report under heading "Takuapa district"), and which is ripe for immediate development. It is probable also that, after the general manager gets back to Siam and has time to go into the question there, a method for the operation of the Bandon property may be devised that will involve the promotion of a separate company to operate that property.

Referring to the abandonment of their plans for the proposed new issue, he said: I hope that so soon as times are more propitious the issue may yet be made, and that we shall be thereby enabled to widen our activities upon the lines which have been discussed and agreed upon with the general manager. I now beg to move that the report and accounts as presented be received and adopted.

Mr T. Gilbert Scott seconded the resolution, which was carried unanimously.

The retiring director and the auditors were re-elected, and a vote of thanks to the chairman, directors, and staff, both at home and abroad, concluded the proceedings.

KELLY'S DIRECTORIES.



IMPROVED RESULTS—THE NEW PREMISES

The twenty-third ordinary general meeting of Kelly's Directories, Limited, was held on the 5th instant, at the offices of the company, 182-184 High Holborn, London, Mr E. Festus Kelly (Chairman of the company) presiding.

The Secretary (Mr R. W. W. Spooner) having read the notice convening the meeting, and the report of the auditors having also been read,

The Chairman, in moving the adoption of the report and accounts, said: You will notice from the balance-sheet that there are several very important changes. In the first place the directors came to the conclusion that it would be desirable to capitalise part of the reserve fund and to issue bonus shares for the amount. So,634 £1 shares were so issued, being one new share for every three held, excluding fractions. The principal reason for so doing was the purchase of the Strand premises of Messrs W. H. Smith and Sons.

The item which mostly interests shareholders is the profit and loss account, which shows the very splendid increase of £28,675. Three factors have combined to produce this result—renewed efforts on the part of the staff and directors, the return to business of many professional and business men who have, to re-establish their position, found it necessary not merely to purchase books,

but to advertise, and the third factor is that we were fortunate enough—or prudent enough—to purchase the paper required for the production of books published during the year represented by the accounts much earlier than usual, and so those books have had the advantage of paper purchased at a far lower rate than that now prevailing.

To every man of business the future must give food for anxious thought. The persistent and continual rise in wages, necessitated by the increased cost of living, must shortly come to a halt or there will be a risk of all business becoming stagnant. Rightly, or wrongly, the directors have held the view that the price of the books must not be increased in the same ratio as the cost, and up to the present that policy has been justified by the results, but, to provide the vastly increased revenue required, further attention must be devoted to the advertisement side of the business, and with that view the directors have been considering the appointment of a director who should specially devote his attention to new methods.

FINEST POSITION IN LONDON.

The purchase of the Strand premises and the coming out of the the company from its semi-retirement in this backwater of High Holborn to the full publicity of what I consider, for this business, to be the very finest position in London, will afford an opportunity for developments which have long been contemplated. The Merchants' and Manufacturers' Directory continues to meet with increased approval from our foreign customers. The 1920 book has been, too, recently published for definite figures to be given, but approximately we can show 30 per cent. increased sale in U.S.A., 20 per cent. in Holland, 180 per cent. in Egypt, 26 per cent. in Japan, 46 per cent. in Spain, and business has recommenced in spite of all difficulties in Turkey and Syria, and resumption of business overseas, held up during the past six years, should provide for increased business in the more remote business centres of the world.

No address from a chairman of a meeting like this is complete nowadays without some reference to excess profits. This year we shall possibly become liable to be assessed under this head, and I am not certain that we should have committed ourselves to the purchase of the Strand premises and the necessary extensions to justify the expenditure if we had anticipated that the excess profits duty would be continued. So far as our own business is concerned, we have no reason to complain. But the only way by which this business, with its enormously increased costs, can be maintained is by continued extensions, and for this extension to be possible a broader basis is required, and this basis can only be obtained if you have a prosperous national trade. Given proper attention to the key of this business—accuracy—there is no reason why the increased capital and constant thought given to it should not continue to produce satisfactory results, and the company continue to prosper.

Mr Arthur L. Kelly seconded the motion.

Mr F. J. C. Grey said that on the completion of their premises at Kingston they hoped to be able to undertake the printing and binding of the whole of their production without any outside assistance.

The resolution was carried unanimously.

The formal business was duly tranacted.

SPIERS AND POND, LIMITED.

COMPANY'S BEST REPORT.

The 36th ordinary general meeting of shareholders was held, on the 7th inst., at the Cannon street Hotel, London, Sir J. S. Harmood Banner, M.P., the chairman of the company, presiding.

The Chairman said: The directors' report is a record very briefly of what has been a busy and, I think I am justified in saying, a very satisfactory year. When I addressed you 12 months ago I said that the report we were then considering was the best in the history of the company—well, gentlemen, we have now beaten that record, as I think you will agree if you will kindly follow me through the figures in the balance-sheet.

The first item to which I must draw your attention is the share capital. As you are aware, we held a special meeting in February last, when the nominal capital was increased from £550,000 to £850,000, and a bonus distribution of one share in five was made to the shareholders. This absorbed £98,902, and at the same time we issued for cash £99,415. The issued capital was therefore increased from £494,512 to £692,829, and we have capital authorised but not issued to the amount of £157,171. I should remind shareholders that although this new capital was only issued at the end of our financial year, with the result that at the time the balance was struck the company had had absolutely no benefit from it, it carries the full final dividend of 7½ per cent., which we recommend. This dividend on the new capital absorbs just under £15,000, which is practically equivalent to a further dividend on the old capital of 3 per cent., and it is only right that the proprietors should recognise that this is really an additional and rather substantial bonus.

The debentures and mortgages remain at the same figure, while sundry creditors and credit balances at £150,976 show a considerable increase of approximately £56,000. While this includes certain provisions which we have deemed it necessary to make for income-tax and other contingencies, the cause for the increase lies principally in the higher prices of commodities, and the fact, as you will see from the other side of the account that we hold increased quantities of wines, spirits, and other goods, all of which at the date of the balance-sheet had not been paid for.

The suspense account has been reduced from £336,816 to £181,915. This reduction has been brought about, firstly, by the capitalisation of £99,000 distributed by way of bonus, and as to practically the whole of the balance by writing down the value of the freehold and leasehold properties and the plant, furniture and equipment. The broad result is that we have in this suspense account a sum of practically £182,000 available for further writing down if this should be found desirable.

The general reserve, at £30,000, is the only other item on this side of the account to which I need refer. This is the amount allocated from the previous year's profits, and if you approve the accounts we now present it will figure next year at £60,000, with a further £10,000 as a reserve for taxation. I can only say they are comforting items to your board, and I hope as time goes on we may see these reserve items swell and increase. We are not, as a board, out for any sensational dividend declarations—we want to proceed conservatively and prudently, and we hope we shall carry our shareholders with us in this policy.

Turning to the assets side, I have already referred to the items of freehold and leasehold properties, and plant, furniture, and equipment, but it is necessary to elaborate a little. In the report we tell you that the reinstatement of the Granville Hotel, at Ramsgate, the Victoria Hotel, Manchester, and the South Kensington Hotel has now practically been completed. We have spent a large amount of money on these properties, and there will be more to be charged up in the current year's accounts. The Granville Hotel, as you probably know, was taken over by the Government during the war, and though we have received a payment from the Government towards the cost of reinstatement—which has been applied in reduction of the expenditure we have made thereon—this amount in our opinion was ridiculously inadequate. Then again we have acquired the Southampton Hotel, Surbiton—a small property, but quite a profitable one, and capable of development. On the other hand, we have sold the premises in which we formerly carried on the retail stores. These are the changes in the properties, and they have on balance added £44,427 to the freehold and leasehold properties account, of which we have written off £28,702 from the suspense account, leaving the properties in the balance-sheet at just over £1,015,000.

The profit and loss account shows that our gross profits have increased from £128,500 last year to £151,300, and after payment of debenture interest and the other items set out in the report we are left with £124,946 as the net available profit, against £101,806 12 months ago. With the amount brought forward from last year we have available the total sum of £140,300. From this we have paid 5 per cent. on the ordinary shares and we now recommend a final dividend of 7½ per cent., making 12½ per cent. for the year. In conclusion he moved the adoption of the report and accounts.

Mr J. Douglas Broad seconded, and the resolution was agreed to.

RAND SELECTION CORPORATION, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

THE MERGER WITH THE ANGLO-AMERICAN CORPORATION.

The twenty-eighth ordinary general meeting of shareholders was held in Johannesburg, on May 27th, Mr F. R. Lynch (the chairman) presiding.

The Chairman said: The capital of the corporation has now been increased to £600,000. The mining activities in the Far East Rand have continued to be reflected in the sale of stands at Brakpan Township and Springs Township. As you are aware, most of the stands are sold on the instalment system, and the amount owing to the corporation at the end of the year in respect of instalments and interest on such sales in both townships was £71,776. During the year the Government granted your corporation the right to lay out a new township on the Farm Rietfontein as a further extension of the existing Springs Township. The initial expenses in connection with the acquisition of this township extension—namely, £1,735—were written off the money received from the sale of stands last year.

During the year Brakpan Mines, Limited, called upon the Consolidated Mines Selection Company, Limited, in terms of its

guarantee, to provide funds to exploit the Lease Area, to take up 32,500 new shares at £5 each, of which this corporation took up 11,855 shares. Our participation in the guarantee was 25 per cent., and the explanation of the greater proportion of shares taken up by us last year is that certain other sub-participations from the Consolidated Mines Selection Company, Limited, had previously been taken up in full. Since the end of the year the balance of the shares has been called up, and our liability under the guarantee will be extinguished. Your corporation's holding in Brakpan Mines, Limited, will thereby be increased to 277,000 shares. We are still liable to be called upon to provide £62,500 as our share of a loan of £250,000 if Brakpan Mines should find it necessary to borrow this sum for the completion of the scheme of development outlined in the Mineral Lease. Our interest in Springs Mines, Limited, has been increased to 279,743 shares by subscribing for 7,949 new shares at £3 each in terms of the arrangements made for providing the funds required for the Springs Mines Lease Area, and by the receipt of 1,500 shares from the New Geduld Deep, Limited, by way of dividend. The corporation's interest in Daggafontein Mines, Limited, has been increased from 71,276 shares to 85,445 shares by the exercising of certain options, which matured in March, 1919, and by the exchange of our holding of 600 shares in the Daggafontein Gold Mining Company, Limited. The four and five-year options which we held have been sold. Our holding of fully-paid-up shares in West Springs, Limited, has been reduced by sales from 37,751 to 3,493, and we still retain 100,000 shares on which 2s each is paid up. No call was made during the year on these partly-paid shares.

PROFIT AND LOSS.

The revenue of the corporation for the year amounted to £159,605, and was less by £61,811 than that for 1918, when £221,416 was received. The falling off is entirely due to a reduction in the sums received by way of dividends on our investments, which totalled only £73,641 in 1919, as against £144,153 in 1918, the actual shortfall being £70,512. In 1918 we received £82,712 from Brakpan Mines, as against £72,391 last year, while from Springs Mines we received £60,816 in 1918 and no distribution was made in 1919. All other sources of revenue show an increase, with the exception of township profits and underwriters' commission; in both cases the decrease is negligible. The expenditure for the year, amounting to £13,463, shows a small increase of £572, and calls for no comment. The profit for the year amounted to £146,141, which, added to the unappropriated balance at the end of 1918, gave a total sum available of £232,503. This amount has been dealt with as follows:—Government taxes absorbed £10,717, or an increase of £6,000 over last year's figure. The increase is accounted for by the greater value of the dividend distribution and by the necessary provision for English income-tax. The dividend distribution of eight shares per 100, which absorbed £133,270, and the cash distribution of £57,450, at the end of the year together amounted to a cash distribution of £190,725 for the year, equivalent to 39.4 per cent. But the value of the dividend distributed was actually greater than this, because the enemy shares were purchased from the Custodian of Enemy Property for 73s 6d each, and on the day they were distributed there were firm buyers at 79s. The unappropriated profit at the end of 1919 was £22,020, as against £86,361 at the end of 1918, the reduction being due to the distribution of the enemy shares.

I must refer to the merger of the interests of this corporation with those of the Anglo-American Corporation, and the reasons which induced your directors and several of the larger shareholders to agree to it. There was a desire for the continuance of your corporation, owing to the natural sentiment engendered by its long and successful career since its inception in 1889. On the other hand, if the Anglo-American Corporation was to be the survivor, the continuance of its present financial backing would be assured, and the joint corporation would still obtain the additional source of strength from the Consolidated Mines Selection Company, Limited, through its large interest in your corporation. A further and very important consideration is that the articles of association of the Anglo-American Corporation are up to date and wide in scope, and more suited to modern conditions and business than the articles of your corporation, which were drafted 32 years ago. Eventually it was decided that the interests of the joint corporations would best be served by the Anglo-American Corporation being the survivor.

Mr C. Marx seconded the motion, which was carried unanimously, and the usual formal business terminated the proceedings.

SPRINGS MINES, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

GOOD PROSPECTS FOR CURRENT YEAR.

The eleventh ordinary general meeting of shareholders was held in Johannesburg, on May 27, 1920, Mr F. R. Lynch (the chairman) presiding

The Chairman, in moving the adoption of the report and accounts, said: The paid-up capital of the company was increased during 1919 to £1,196,736 by the issue of 43,236 new shares, which were taken up by the Consolidated Mines Selection Company, Limited, under the financial agreement for the provision of the funds contemplated in the mineral lease. Shaft sinking and preliminary development was credited with £88,500 of the proceeds of the new shares, and the balance of £41,208 was applied to the redemption of debentures. At the end of the year the Consolidated Mines Selection Company, Limited, had subscribed for 196,736 shares at £3 each under the agreement, and there was a balance of 303,264 shares to be issued to them, at the same price, as and when required for the provision of further capital. Since the end of the year a further 29,000 shares have been called up, and the issued capital of the company to-day is £1,225,736. Estimates are being prepared of our expenditure until the end of the year, and a sufficient number of shares to cover that expenditure will be called up. The debenture issue was reduced during the year by £23,920, of which £17,110 were drawn for redemption and £6,810 were purchased. Since then debentures of the nominal value of £2,265 have been purchased.

The value of the gold recovered, at the standard price of £4.227 per fine ounce, was £830,124, as compared with £905,777 for 1918, a reduction of £75,653. The explanation for this reduction is that the yield per ton milled fell from 42s 4d per ton to 38s 2d per ton. The value of the ore reserve, which was estimated at 9.26 dwts over 61.25 inches—or 567 inch-dwts—at the end of 1918, was estimated at June 30 last at 8.73 dwts over 62.23 inches, or 543 inch-dwts. The revaluation at the end of the year, however, showed a slight improvement to 8.74 dwts over 62.92 inches, or 550 inch-dwts.

It was expected that the premium on gold would greatly benefit the mines, but higher wages, increased prices for stores, and the big rise in the Bank rate absorbed a considerable proportion of the gold premium. The unappropriated profit carried forward from 1918 was £209,855, and £328,522 profit was earned during 1919, making a total of £538,377. Of this amount £379,274 has been appropriated for capital expenditure, £11,765 for Government taxes, £10,552 for Government participation in profits, and £88,212 for development suspense account, leaving a balance of £48,574 to be carried forward.

The development accomplished during the year totalled 18,560 feet, of which 12,833 feet were on reef; of this footage the 12,770 feet sampled yielded an average assay value of 19.79 dwts over 17.97 inches. At the end of 1919 the ore reserve had been increased to 2,417,298 tons, valued at 8.74 dwts over 62.92 inches, or 550 inch-dwts. The average value of the ore reserve on the basis of the standard price of gold is now estimated at between 35s and 40s, as compared with the estimate given by Mr Davis in his report of May 13th at between 35s 3d and 39s 4d. The shaft-sinking programme is being well adhered to.

It is very difficult to forecast the immediate future. The gold mining industry is going through a very trying and anxious period, but I think the worst of it is over. There is a tendency on the mines towards a greater efficiency in labour, due probably to the settling down of many mine employees who have felt the disturbing and restless influences of their life on active service. I think, too, that the prices of stores have reached their maximum, and that a means will soon be found to relieve the industry of the burden of the heavy exchange. I feel justified, therefore, in looking forward with confidence to the future of the mining industry of South Africa.

Mr W. E. Hudson seconded the motion, which was passed unanimously, and the usual formal business terminated the proceedings.

BRAKPAN MINES, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

DEVELOPMENT AND PROSPECTS.

The seventeenth ordinary general meeting of shareholders was held in Johannesburg on May 27, 1920, Mr F. R. Lynch (the chairman) presiding.

The Chairman, Mr F. R. Lynch, in moving the adoption of the report and accounts, said:—The issued capital of your company on January 1, 1919, was £791,100. During the year, in terms of the lease agreement, the Consolidated Mines Selection Company took up a further 32,500 £1 shares at £5 each to meet capital expenditure, and at the end of the year the issued capital had been increased to £823,600. In March last, after adopting the engineering estimates for the current year, your directors called up the balance of the shares guaranteed at £5 each, and the authorised capital of the company, amounting to £850,000, will therefore shortly be fully issued. The capital expenditure for the year was £146,321. Of this total, £138,369 was allocated to shaft sinking and equipment in the lease area and £7,952 to the equipment of the 18th Level pumping station and a few necessary additions to the reduction plant.

The value of the gold won during the year, after including a credit for £9,652 on gold realisation charges and £98,773 on account of the gold premium, amounts to £1,147,796, which is an increase of £57,837 as compared with 1918. The working expenditure is practically unchanged at £724,836, compared with £723,949. The method of assessment of the Amended Miners' Phthisis Act is open to very serious criticism, as 20 per cent. of the levy is assessed on the basis of the profits made by the employer. In effect, therefore, the more profitable mines have to bear a proportion of the compensation which should, in equity, fall upon the less profitable mines. The unappropriated balance of £51,232 carried forward from 1918, together with the balance of general expenditure and revenue for 1919 of £424,246, gave us an available balance of £475,478. Government taxation absorbed £49,829, an increase of £558; and the participations payable to the Government under the mineral lease, and the owners of the Schapenrust claims, increased by £5,000 to £21,705. The dividend declarations for the year amounted to £224,365, as against £257,107 in 1918, a reduction of 5 per cent., but the carry forward was increased from £51,232 to £133,363. When the dividend declaration had to be made about the middle of December it was impossible properly to estimate the benefit to our finances of the gold premium, and your directors had no alternative but to follow a conservative policy. The amount of £46,215 appropriated to the development suspense account makes up the balance of the available working profit for the year. The total amount expended on development was £161,520, of which £125,305 was provided out of working costs. The balance of £46,215 was appropriated from the profit earned during the year.

The ore reserve of 2,484,000 tons, although lower by 234,000 tons than at the end of 1918, shows an increase of 106,000 tons as compared with the estimate of 2,378,000 tons in June last. The tonnage crushed shows a reduction from 617,100 tons in 1918 to 544,200 in 1919, a falling off of 72,900 tons. Good progress in shaft sinking is being made. For the first three months of this year 143,700 tons were crushed. The grade equalled 35s 7.7d per ton, but costs advanced to an average of 30s per ton. The profit earned was £93,681, including the gold premium, and the gold reserve remained unaltered at £15,640. The development footage totalled 4,202 feet, of which 2,870 feet were on reef and 1,410 feet, equivalent to 49.1 per cent., were in payable areas, averaging 15.17 cwts over 39.6 inches.

The motion was carried unanimously and the usual formal business terminated the proceedings.

BALDWINS, LIMITED.

THE NEGOTIATIONS WITH MESSRS SPERLING AND CO.

The seventeenth annual ordinary general meeting of the members of Baldwins, Limited, was held, on the 7th inst., at the Grand Hotel, Birmingham, the chairman (Colonel Sir John Roper Wright, Bart.) presiding.

The secretary (Mr G. V. Hazelton, F.C.I.S.) having read the auditors' report, the Chairman apologised for the absence of Sir Richard Vassar-Smith and Mr E. L. Evan-Thomas through indisposition.

In proposing the adoption of the balance-sheet and accounts, the Chairman said: Your board much regret the delay in presenting the accounts for the year ended June 30, 1919, which has been due to the difficulties in connection with excess profits and the pressure on our professional valuers. The dividends for that year have already been paid, and, as already intimated, it is not intended to suggest that any further dividends should be paid. The balance-sheet is presented to you in the same form as last year. You will see that our ordinary share capital is increased from £3,080,654 to £3,526,644; being an increase of 445,990 shares. The majority of these shares have been issued in exchange for shares in subsidiary companies for the solidifying of our position as regards raw materials. The cash share capital has, however, increased by £1,544,907, which includes, in addition to the new shares issued during the year, namely, 445,990 shares, the 15s per share which was outstanding on 1,529,832 shares as per balance-sheet for the financial year ending June, 1918. This money has been needed for the erection of the Margam Steel Works, the increased value of raw materials, as shown in the increase in stocks, and increases in investments. The premiums for the redemption of the debentures and depreciation of leasehold now reach £154,279.

We again carry £75,000 to our reserve, which, with the reserve of £30,000 for the year in the Port Talbot Steel Company, makes the total reserve in Baldwins £289,835 and the Port Talbot Steel Company £114,625, or a grand total reserve of £404,460. In addition to this there are also the premiums received on the issue of the ordinary shares, which have been increased this year from £479,615 to £597,363. You will see from the accounts which you have received that we were quite justified in paying the dividend free of income-tax for the year, as, after dealing with the accounts, we carry forward £285,799, being a little over last year. Our investments have increased from £1,153,026 to £1,783,392. The liquid assets, namely, cash at bankers and trade debtors, are also well in excess of our sundry creditors, which include provision for excess profits duty up to date. I trust the accounts as placed before you will be satisfactory.

Referring to the negotiations for the sale of the business, the Chairman said that on February 17th he received a letter from Sperling and Company's office signed by Sir E. Mackay Edgar confirming an offer to purchase all or any part of the ordinary shares at 60s per share, subject to acceptance by holders of 51 per cent. of ordinary shares. In that offer it was stated "that the sole reason we are purchasing is to ensure our steel position for our different shipyards, and that we are purchasing on behalf of that combination, but our desire and intention will be to develop the Baldwin position to the fullest extent possible in the interests of the Baldwin Company." The board expressed willingness to accept the offer, and recommend it to shareholders. Outstanding points were settled, and an agreement was signed by most of the directors on February 26th. A formal offer was made by circular to holders of ordinary shares to purchase on the terms stated. Before the prescribed date, April 15th, holders of approximately 97 per cent. of ordinary shares had assented. On April 19th the Budget proposals disclosed that excess profits duty would be increased from 40 to 60 per cent., and corporation tax of 5 per cent. would be imposed. On May 25th Sir Edward and Mr Workman intimated inability to carry out the original proposal. An alternative proposal was afterwards made, which the board could not recommend. The main lines of an offer were ultimately agreed, but the proposal broke down because the directors were unable to obtain the security for the payment which was to be made. It became evident in May that Messrs Sperling refused to recognise any personal liability on the contract of February. Their reasons appeared to be that they acted as agents for a disclosed principal, the Northumberland Shipbuilding Company, Limited, and that the continuation and increase of the excess profits duty relieved the purchasers, whoever they might be, from any liability. At no time was it suggested to the board or their solicitors that Sperling and Company were only purchasing as agents for the Northumberland Shipbuilding Company. No doubt Messrs Sperling hoped for relief in regard to excess profits duty, but Baldwins' board entirely repudiated any suggestion that such relief formed a condition, actual or implied, of the contract entered into.

Mr Roger Beck seconded the motion, and the report was adopted.

HAYES, CANDY AND CO., LIMITED.

INCREASE OF CAPITAL APPROVED.

THE POSITION OF THE PREFERENCE SHAREHOLDERS.

An extraordinary general meeting of Hayes, Candy, and Co., Limited, was held, on the 9th instant, at Winchester House, Old Broad street, London, for the purpose of considering resolutions for increasing the capital of the company to £400,000 by the creation of 100,000 "B" preference shares of £1 each and 100,000 ordinary shares of £1 each, and making alterations in the articles of association, including provision for the capitalisation of reserves. Mr W. M. Candy (chairman and managing director) presided.

The secretary (Mr A. Mackenzie) having read the notice convening the meeting and the resolutions,

The Chairman said: Ladies and gentlemen,—As we have already given you to understand, the board has for some time had under its very serious consideration the expediency, if not the absolute necessity, of a reorganisation of the company's capital.

NEED FOR MORE CAPITAL.

The capital arrangements made at the time of the company's incorporation in January, 1900, provided for the company no more than £110,000 cash capital. Since that date our annual turnover has increased about four times, and our profits so far this year are well in excess of any previous year for the same period. The stocks naturally have also increased not only in quantity, but much more so in relative value, and although we have excellent banking facilities, we think the position warrants our asking for more capital. We have every reason to be satisfied with the extraordinary growth of our business, the records of the last few years showing a uniformly continuous and consistent increase in the volume of our trading. Therefore if this is to continue, it is essential that we should increase the cash resources at our own absolute command.

THE PROPOSED ISSUE.

It will, of course, be obvious to you that it is not possible, with money at its present price, to issue preference shares, carrying the same rate of interest as our existing preference share capital, and

the proposal which is now engaging the consideration of the board is to authorise an issue of 100,000 "B" preference shares, carrying a fixed minimum cumulative preference dividend of 7½ per cent. per annum, with the right in years when the ordinary shares receive dividends exceeding 10 per cent. to share in the prosperity of the company to the extent of receiving an additional ½ per cent. for every 1 per cent. over 10 per cent. paid on the ordinary shares until the new preference shares shall have received in any year a maximum of 10 per cent. We propose to make an early issue of £80,000 of this new "B" preference share capital, and we think we have seen our way to secure a subscription of these shares on satisfactory terms. We further propose to make one of the attractions of the issue an offer to applicants of the right to ask for an allotment at a small premium of an amount of ordinary share capital equal to one-fourth of the preference share capital allotted to them. When this issue is made, we propose to give to our existing shareholders and also to our customers preferential consideration on allotment. If, as we anticipate, this right is taken advantage of, the issue proposed will give to the company a sum in cash of about £100,000, of which we expect to be able to make advantageous use. At the same time we think that the present ordinary shareholders may fairly expect something more than they have already received out of the past satisfactory earnings of the company, if this can be fairly given them without unduly encroaching upon the company's cash resources.

INTERIM DIVIDEND AND BONUS SHARES.

We accordingly propose, in addition to at once paying an interim dividend at the rate of 15 per cent. per annum in respect of the first six months of the current year, to capitalise undistributed profits of the company to the extent of £40,000, to apply this sum in paying up in full ordinary shares for that amount, and to distribute these fully-paid ordinary shares amongst the existing ordinary shareholders in the proportion of one new ordinary share for every two ordinary shares now held. To enable the directors to give effect to the proposals which I have outlined, we are to-day submitting to you the resolutions which you have heard read in the notice of to-day's meeting. You will find included among the resolutions a resolution increasing the ordinary fixed remuneration of the board. The directors venture to think that you will agree with them that the present fixed remuneration of £100 per annum each is hardly commensurate with the importance of your undertaking, and they are confident that the increase proposed will commend itself to you all. You will also find resolutions modifying the provisions of the existing articles of association in regard to the reserve fund. We think that the new provisions, while retaining the present restrictions on dividends originally imposed for the protection of the preference shareholders, tend to simplicity, and give to your directors clearer powers as to increasing, when occasion offers, the amounts carried to reserve.

THE RESOLUTION.

I now beg to move the first resolution contained in the notice convening the meeting, namely:—

"That the capital of the company be increased to £400,000 by the creation of 100,000 'B' preference shares of £1 each (such shares to confer upon the holders the rights and privileges specified in the company's articles of association as altered by the next following resolution) and 100,000 ordinary shares of £1 each, ranking *pari passu* in all respects with the ordinary shares in the present capital, and that the directors be and they are hereby authorised to increase the capital accordingly, and that all the new shares be at the disposal of the directors, who may allot, grant options over, or otherwise dispose of the same to such persons, at such times, and on such terms as they think most beneficial to the company."

Mr William B. White, in seconding the resolution, said there was no occasion for him to add anything to the chairman's lucid explanation, but he might say that the board had given the whole matter very careful consideration, and had come to the conclusion that if the company was to go on increasing its trade as it had been doing, it was necessary to have more capital.

The Chairman then invited questions.

MR BOUTWOOD ON THE TREATMENT OF PREFERENCE SHAREHOLDERS.

Mr J. J. Boutwood said that, as a holder of preference shares, he would like to express his disappointment that some consideration was not being shown to this class of shares. It seemed to be the common practice nowadays, in connection with the issue of fresh capital, for companies to increase the dividend on their preference shares. He would also like to suggest that the £5 preference shares should be divided into shares of £1 each.

CHAIRMAN'S REPLY.

The Chairman, in reply, said that Mr White and himself were in the same boat as the last speaker, both of them being large holders of the 5½ per cent. preference shares, and Mrs Hayes was the largest holder of them. They themselves made an effort some eight months ago to get a bigger dividend for those shares, but they were advised by the company's solicitors that this could not be done without going to the court, and, even if the court permitted it, it would be necessary to obtain the consent of every ordinary shareholder in the company. They did not, therefore, proceed with the matter. He believed their own memorandum of association was drawn up in a different way from those of some other companies. He would remind preference shareholders that if they took up some of the new shares, as he was going to do, they would thereby obtain a better average return.

COMPLAINTS OF PREFERENCE SHAREHOLDERS.

Mr Watson Slack remarked that he was also a preference shareholder, and he had written to the board on the subject of increasing the dividend. In their reply, the directors had expressed their sympathy, and he would like to point out that as they were altering the articles of association, provision might have been made for a higher rate to be paid.

The Solicitor (Mr Martin) said that Mr Slack was under a misapprehension. It was not a question of alterng the articles, but of altering the memorandum of association, which fixed the amount of the dividend on the preference shares, and their participation in the assets of the company in the event of winding up. The ordinary shareholders took up their shares having regard to the prior rights of the preference shareholders, and if the advantage which the latter received were increased, the ordinary shareholders would have ground for complaint. There were two difficulties to be faced: the first was insurmountable without going to the court, and obtaining an alteration in the memorandum, and the second was that they would never get the ordinary shareholders to consent.

A shareholder said he thought the scheme submitted was conceived absolutely in the interests of the ordinary shareholders. The preference shareholders were left with the same dividend, but it was proposed to take the reserves and distribute them among the ordinary shareholders. The preference shareholders subscribed their capital on the understanding that there should be a reserve built up and invested outside the business.

The Chairman said that the statement just made was not quite correct. The company was bound to keep £30,000 always in reserve. Should it be reduced below that amount only 5 per cent. could be paid on the ordinary shares, unless an amount equal to any excess over 5 per cent. be placed to reserve.

Mr Boutwood considered the question was of sufficient importance to justify the board in going to the court for an alteration of the memorandum. He did not think there would be the opposition on the part of the ordinary shareholders that seemed to be contemplated.

The Chairman having promised that the board would give their consideration to the suggestions that had been made, the resolution was carried with four dissentients.

On the motion of the Chairman, seconded by Mr. White, the second resolution, providing for certain alterations in the articles of association, including power for the capitalisation of profits, was unanimously passed.

Mr J. W. Palmer suggested that steps should be taken to split the £5 preference shares into £1 shares, as he believed it would make them more marketable. He remarked that both Mrs Hayes and himself were very large holders of those shares. They owned also one-fourth of the ordinary capital of the company, and he would like to point out that when in the past they were not receiving a penny on those shares by way of dividend, the preference shares were still getting their 5½ per cent. (Hear, hear.)

INCREASE OF CAPITAL APPROVED.

At a separate general meeting of the holders of the ordinary shares a resolution was unanimously passed approving the increase of capital and the alteration of articles.

Mr E. A. Cameron proposed a vote of thanks to the chairman and directors, remarking that the shareholders were very much indebted to the board for their excellent stewardship of the company's interests.

The vote was unanimously accorded, and the proceedings terminated.

CROMPTON AND CO., LIMITED.

UNPRECEDENTED DEMAND FOR COMPANY'S GOODS.

EXTENSIONS TO COMPANY'S WORKS.

The seventh annual general meeting of Crompton and Co., Limited, was held, on the 8th instant, at Winchester House, London, Mr A. A. C. Swinton, F.R.S. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that the past year had been in many respects abnormal. The demand for goods of the company's manufacture had been quite unprecedented, and they had been obliged to decline a good deal of business which, had the capacity of their works been larger, they would have been glad to undertake. The orders

booked during the year showed an increase on the previous year of 80 per cent., and the unexecuted orders in hand at the close of the financial year represented a very large amount. The demand for electrical machinery had been equally brisk at home and abroad, and although in some quarters there was a falling off in home trade, he was inclined to think that manufacturers of electrical machinery were likely to feel the effects less than most other trades, as the high cost of labour and material rendered the extended use of electrical machinery an absolute necessity in many industries. The company's ability to secure business at the present time was only limited by their capacity to turn out the work, and he did not anticipate any alteration in that position for some time to come.

THE WORKS AT CHELMSFORD.

In view of the increasing demand on their manufacturing capacity, they had been obliged to extend their original programme for the new buildings at Chelmsford. Unfortunately, the difficulty in obtaining material and labour had delayed the execution of these works, and he was afraid it would be some time yet before they secured the full benefit of the expenditure they were incurring. The effects of the moulders' strike had not yet entirely passed away, and the holding up of work in hand and the extra expenses entailed upon the company in their endeavour to minimise the inconvenience to customers had had a very material effect upon the profit for the year. It was, therefore, with a considerable amount of satisfaction that the board were able to submit accounts showing a net available profit of £52,878—an increase of approximately 37 per cent. on last year. So far as the current year was concerned, their trouble was not to get orders, but to avoid offending customers by their inability to supply them with all they wanted. This being the position, he thought shareholders would agree that the board were justified in looking forward to a successful year.

Mr Saxton W. A. Noble seconded the motion, which was carried unanimously, and a dividend of 10 per cent. on the ordinary shares was declared.

A resolution was afterwards passed providing that the limitation of the borrowing powers of the directors provided by article 80 should no longer apply.

WELSBACH LIGHT COMPANY, LIMITED.

E.P.D.—TREATMENT OF KEY INDUSTRIES.

The ninth annual general meeting of the Welsbach Light Co., Limited, was held on the 7th instant, at Winchester House, Old Broad street, London, Mr J. R. Yates (chairman of the company) presiding.

The Secretary (Mr E. J. Butcher) having read the notice convening the meeting and the report of the auditors,

The Chairman said that the favourable outlook which the directors had worked to attain was affected by two matters referred to in the forefront of their report, one of which was the continuance of the tax known as E.P.D. This might have been admissible as a temporary expedient, but as a continuous policy it was likely to be destructive of itself and of the industry upon which it was imposed. The second point was the delay in fulfilling pledges given for the safeguarding of "key" industries and the prevention of dumping. It would be remembered that in the Bill promoted by the Government last autumn an endeavour was made for the safeguarding of industries adversely affected by the depreciation of foreign currency and "key" industries, including that of this company. Before the war the industry was dominated from abroad, and if we were again to have dumped into this country mantles produced under conditions very different from those prevailing here, numbers of British workers would be thrown out of employment, and the "key" industry this company had helped to build up seriously affected.

One matter which in the past had vitally affected the industry was the marking of important incandescent mantles. Their experience had been that their trade marks and trade name had been unlawfully attached to goods imported into this country from abroad. They had given evidence before the Board of Trade Committee which had been appointed to report upon the alterations necessary in the Merchandise Marks Act. That Committee had recently reported, and though its recommendations fell short of what the company desired, it was hoped that legislative effect would be given thereto without unavoidable delay.

The Chairman then went through the accounts in detail, and concluded by proposing the adoption of the report and accounts and the declaration of a dividend of 10 per cent. and a bonus of 5 per cent., both less tax, on the old shares, leaving a balance of £21,343 to be carried forward.

Mr B. Cars (managing director) seconded the motion, which was carried unanimously.

† Rates lowered ½% on Jan. 2, 1918, and lowered ½% on Feb. 14, 1918, but raised ½% on Oct. 6, 1919, and ½% on Nov. 6, 1919, and 1% to 5% on April 15, 1920. ‖ Lowered from 3½% to 3% on June 5, 1918, but was raised to 3½% on July 31, 1919, to 3¾% on Oct. 6, 1919, to 4¼% on Nov. 6, 1919, and 5¼% on April 15, 1920. * Changed from 4¾% to 4% on Dec. 27, 1917, and from 4% to 3½% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3⅜% (July 14 to August 15, 1919, period of daily sales); three months, 3½%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4½%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4⅓% to 5½%, and the six months' rate from 5% to 5½%. On March 19, 1920, daily sales of six months' Treasury bills at 5½% were replaced by twelve months' Treasury bills at 5½%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5½% to 6½%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

Total value of imports of gold.....	639,850	Total declared value of exports registered in the week	487,320

Messrs Samuel Montagu and Co. write as follows on July 8th : "Gold :—The Bank of England gold reserve against its note issue was £116,737,270 on June 30th, and £119,485,475 on July 7th. The last-named total is £2,749,790 more than that of June 23rd. The total in the return for July 7th is a record. A fair amount of gold came into the market this week, and nearly all was taken for New York. It is reported from New York that $2,300,000 in gold has been received from London during the week, and that $3,150,000 is on the way from the same quarter. The following official figures reveal the powerful absorption of precious metal by India :—

NET IMPORTS of GOLD.

	Average of Five Years 1909-10 to 1913-14.	Net Imports. 1917-18.	Net Exports. 1918-19.
	£	£	£

Total	18,766,000 ..	16,785,000 ..	3,709,000

NET IMPORTS of SILVER.

	Average of Five Years 1909-10 to 1913-14	1917-18.	1918-19.
	£	£	£
On private account	4,806,000 ..	457,000 ..	678,000
On Government account..	2,346,000 ..	12,238,000 ..	44,601,000
Total net imports	7,152,000 ..	12,695,000 ..	45,279,000

It has been rumoured in Bombay that wheat exports may be permitted in October, but it is suggested that the Punjaub would not consent to part with its wheat, unless paid mainly in gold. Silver: The market has been of a steady character during the week, owing to the paucity of business. Buying has been con-

fined mostly to covering by bears, whilst Continental sales have been less in evidence. Eastern demand is absent except at lower limits. The scantiness of supplies has carried the price towards the parity of that in New York, and brought about a sharp rise to-day of 1½d in the cash price. The restrictions upon the export of silver coin and bullion from India have now been removed. A Bill has been drawn up in Norway to authorise copper-nickel coins of the value of 50, 25, and 10 ore, and the question of lowering the quality of the silver in the 1 and 2 kronen is under consideration. In the Straits Settlements some 40 years ago porcelain money —actually gamblers' counters—used to possess a short circulation in the bazaars as money. History seems now repeating itself, for it has been reported that the famous porcelain factory at Meissen has prepared coins of porcelain of the nominal value of 10 pfennig to 5 marks for use in that municipality, and that 20 pfennig pieces have been ordered by Hamburg for use on the municipal tramways. The Indian currency returns which are set out below show a substantial diminution in the holding under the head of Securities (British Government), doubtless, owing to realisation on this side. Such operations must involve a considerable loss to the Indian Treasury, and are a natural consequence of the erroneous policy of holding long instead of short-dated securities in the currency reserve.

CONSOLIDATED EXTERNAL DEBT OF COLOMBIA.—The Council of Foreign Bondholders have received the July instalment of the Debt Service in respect of the half-year ending December 31, 1920.

GUAYAQUIL AND QUITO RAILWAY BONDS AND ECUADOR GOVERNMENT SALT BONDS.—The Council of Foreign Bondholders have received the following telegram from their agent at Guayaquil:—"Remitting £15,000 Railway, also £3,700 Salt Bond."

Established 1810.

THE MECHANICS AND METALS NATIONAL BANK

OF THE CITY OF NEW YORK.

Capital, surplus and profits, $25,000,000

To extend their facilities in the interest of their customers, The Mechanics and Metals National Bank and the New York Produce Exchange National Bank have consolidated under the title of The Mechanics and Metals National Bank of the City of New York.

With its increased capital and improved facilities this Bank is equipped to extend the very best possible service to all those who entrust their business to it, and welcomes this opportunity to enlarge its usefulness to the business community, and increase its service in the interest of trade and industry.

LONDON CORRESPONDENTS:

London Joint City and Midland Bank, Ltd. **London County Westminster and Parrs Bank, Ltd.**

Barclays Bank, Ltd.

3 PER CENT. CONSOLIDATED EXTERNAL DEBT OF COLOMBIA.—Tenders of bonds of the above debt for amortisation were opened to-day at the offices of the Council of Foreign Bondholders. Tenders ranged from 50 to 60 per cent., and those at and under 53 per cent. were accepted.

BANKS.

MECHANICS AND METALS NATIONAL BANK.—The Mechanics and Metals National Bank of the City of New York and the New York Produce Exchange National Bank have consolidated. The name of the consolidated institution will be the Mechanics and Metals National Bank of the City of New York. The combined capital, surplus, and profits of the new bank is $25,000,000, and the deposits exceed $200,000,000. The New York Produce Exchange was originally a State bank with deposits of $30,000,000, and eight branches in addition to its main office. Until very recently it was not legally permissible for a national bank in the United States to have domestic branches. In fact, the Mechanics and Metals National is now one of only three national banks in the City of New York which have branches.

ITALIAN HUNGARIAN BANK.—There has been formed in Budapest under the title of Banca Ungaro Italiana, a banking institution with a capital of 300 million crowns and a reserve of 193 million, which are shortly to be increased to 350 million and 243 million respectively. The object of the bank is to assist Hungarian industry and agriculture and to develop trade between Italy and Hungary. Prominent Hungarian interests are represented on the board. The Banca Commerciale Italiana, with the consent of the Italian Government, has an important share in this undertaking.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Excessive rainfalls and rough winds experienced during the past week, accompanied by a low temperature, has completely suspended field work, owing to the saturated state of the ground. In some parts of the country there is still a good deal of hay to get in from the sodden fields, and it is feared that much damage will ensue unless weather conditions change for the better. Wheat and oats are also adversely affected, and prospects of an otherwise early harvest are now jeopardised. A spell of fine weather is much to be desired, as all crops are in need of warmth and sunshine. Roots, however, have derived benefit from the wet, and potatoes, so far, have been singularly free from disease, but growers will have this to fear should the present rains continue. Offerings of native wheat at the principal distributing centres are on a limited scale, and the maximum price of 90s per qr, delivered, is readily paid for useful milling lots. Fair quantities of im-

ported have been allocated to millers, chiefly consisting of Plate and North American grades, the latter being mostly of the winter variety, with a marked absence of Canadian and Australian descriptions. Shipments from the principal exporting countries are well maintained, a feature being the large quantities coming from Argentina. In the United States harvesting of winter wheat is making excellent progress, and liberal yields are reported, while spring sowings show good promise. The Pacific North-West still indicates a large outturn. Standing crops in Canada are very favourably mentioned, and a preliminary forecast indicates a large yield. Now that the drought in Australia has ended prospects of a surplus over home needs are more likely. Further rains are required in India and Argentina, but otherwise the situation is satisfactory. Continental reports are variable, but mostly anticipate an increased yield on last season. The demand for home milled flour shows signs of falling off, and trade is rather quiet at 63s 6d per sack, ex mill, but small quantities of imported released from time to time find ready takers at 65s 9d per sack of 280 lbs, ex store. Maize has been a very weak market in sympathy with lower c.i.f. rates, with a slow demand, owing to the abundant crop of hay and good prospects of root crops, while there are indications of liberal shipments from the Argentine in the near future. Plate, ex ship, quoted 60s and 62s, landed terms, per 480 lbs. In the forward market values materially declined, owing to a further fall in Argentine freights and weakness in the Plate markets, but later a better demand prevailed, and the decline was subsequently fully recovered, while freights also improved. Plate, June-July, sold 57s 6d, 55s, and 57s 6d, July-August 60s 3d, 58s 3d, and 60s 9d, August-September 60s 3d, 58s, and 60s 6d. Barley steady in value, but trade slow, while restricted by paucity of offerings. English malting 100s to 110s, grinding 90s to 95s per 448 lbs. Of imported, American feed, 44 lbs, nominally 74s, Canada ditto 75s, and Plate 80s per 400 lbs. On c.i.f. terms superior to No. 1 Californian, July, sold to Liverpool at 104s per 448 lbs. Oats have been very irregular, opening weak but improving since, though trade was by no means fast. English quoted 68s to 80s, as to quality, per 336 lbs. Of imported Plate closed at 60s, American white clipped 62s, and Chilean 66s per 320 lbs. On c.i.f. terms Plate f.a.q., June-July, sold 45s 6d, 45s 9d, 44s 6d to 48s, July-August 44s 6d to 47s 6d per 320 lbs. Beans and peas slow of sale, but spot values fairly steady. Homeward freight markets for grain continue weak, though some revival of interest was displayed in the River Plate section, and 77s 6d was taken for two steamers to load maize from Rosario to United Kingdom, August-September with 80s paid for a small vessel, while 65s is about the value for berth parcels down river loading. North American markets dull. Montreal to United Kingdom indicates 11s 6d, Antwerp 12s 6d, and West Italy done at 15s 6d per qr. Flour cargoes to Antwerp-Bordeaux were placed at 60s per ton. India quieter, and 90s paid from Bombay to United Kingdom-Antwerp on dead weight. Australia dull and nominally unaltered. Time charter business slow and rates weak. Large steamers, 7,000 tons and upwards, are offered at 17s 6d, and 3,000-4,000 tons 20s per ton per month for six months' trading.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1919-20, contrasted with 1918-19, 1917-18, and 1916-17.—(Particulars of imports of wheat and flour temporarily discontinued):—

THE IRON AND COAL TRADES.

Our Sheffield correspondent writes:—The booking of new business in the steel trade continues extremely quiet; meanwhile, Belgian competition in finished iron and steel is now a factor to be reckoned with, and reports from the Lorraine district state that coal is now arriving from Saar, and furnaces are gradually being put into blast. The scarcity of pig-iron is still a serious matter, and engineers are unable to obtain sufficient castings to complete their contracts for machinery. Castings are being imported from Belgium and Holland. The foundries, generally, are handicapped by a shortage of labour. As the result of the strike, large numbers of skilled moulders have gone into other occupations, or have emigrated. Makers of tool steel report an entire absence of new business, and the last two weeks have been the worst period in this respect since the war ended. Ferro-randium, an important alloy of high-speed steel, is still unobtainable, and odd lots offered from stocks of users fetch as much as 67s 6d per lb, whereas the pre-war value of the material was about 14s per lb. The market for various alloys of such steel has weakened lately, and supplies are ample. The falling off in the demand for mild steel applies to both the home and overseas markets. Buyers have adopted a policy of extreme caution in the expectation of prices coming down. Makers, however, have plenty of work on hand under existing contracts, and there is no evidence of slackness at furnaces and mills. Basis prices are no lower, but premiums upon these are not being paid now, except in a few instances. Business in engineers' tools is quiet, but there is plenty of demand for hand tools for nearly every purpose. Fuels are now more plentiful, and the more unsettled labour outlook is inducing manufacturing users to increase their reserve stocks further. There has been a glut of house coal, but the public is more disposed now to get in stocks. Prices current per ton at pits are:—Best South Yorkshire steam, 33s 2d to 33s 8d; do Derbyshire, 32s 8d to 33s 2d; best Tyne steam, 160s (export); cobbles and nuts, 31s 2d to 32s 2d; best hard slacks, 28s 5d to 28s 11d; small slacks, 23s 2d to 24s 2d; blast furnace coke, 65s 9d; branch, 37s 2d to 37s 8d; silkstone, 33s 8d to 34s 8d.

Our Glasgow correspondent (writing on Thursday) says:—This has been a very active week in steel and iron trades' connections, particularly as regards production and delivery, all departments concentrating their energies on clearing off contracts before closing down next Thursday for the summer holidays. For Scotch pig-iron demand has been pressing, supplies being wholly inadequate to the meeting of requirements on home account alone. Quotations for prompt business—there are no bookings entertained as yet for beyond the close of July delivery—run from £13 10s to £13 15s, and for one or two special parcels, on export arrangement, £16 10s to £16 15s have been paid. Shipbuilders keep exceedingly busy, and for the moment talk of cancellations has not only ceased, but reports are current of a leading firm in the harbour reaches having secured an order for two or three large-sized steamers. There are quite a lot of inquiries in the market for light sectional material—such as goes into the building of barges and inland river boats—for early shipment to Holland, Rangoon, and the East generally. Merchants declare that makers are not only asking less than was named a month ago, but that in their quotations they are differing to the extent of £3 to £4 a ton. This applies only to export trade. Home rates remain at the combined official level, say, £25 10s for angles, joists, &c. It is suggested that quotations for black sheets (which have remained stationary since May 5th) are about to be raised by 20s to 40s a ton, owing to increase in costs, and the tendency for nails, rivets, and bolts is also given as upward. Boiler makers, tube makers, producers of light and heavy castings, forgings, and general engineers, have still well-filled order books before them. Coals plentiful, though there are none available for export, even at 170s a ton, which has been offered for a cargo to the Continent.

Our Middlesbro' correspondent's report, dated July 8th, is as follows:—Pig-iron: There is no change in the situation. There are more buyers than sellers, and not sufficient iron to go round. There is no early prospect of any increased output. Prices are 217s 6d for No. 3 and No. 4 Cleveland G.M.B. foundry, and 260s for mixed numbers East Coast hematite, for home consumption. Manufactured iron and steel: Although buyers have not been quite so pressing lately, there is no sign of any easier conditions. Steel ship plates, home, £23 10s; steel ship angles, home, £23; iron ship angles, home, £30 15s; iron bars, home, £30; steel rails, home, £23 net. Iron ore: Buyers are getting fair supplies, and are not anxious to buy for forward delivery.

PARTNERSHIPS.

What provision does your Partnership Deed contain as to payment out of capital to a retiring Partner? It would pay you to send a card for particulars of the special life schemes to meet such cases as drawn up by the Western Australian Insurance Co., Ltd. General Manager, G. M. MANCHESTER, July 8.

Although the tone of the market during the week has been rather less depressed, it is not possible to record any real increase in the amount of business passing. The feeling is growing that increased activity is not very far off, but leading buyers still hesitate to commit themselves to large lines at current rates. Many cloth manufacturers have been weak in price when tested, and now and again low figures have been accepted in order to obtain temporary relief. A fair amount of inquiry has come through from India, but business remains very poor. Favourable advices have been received relating to the monsoon rains. The China market has not yet recovered from the panic as a result of the fall in exchange, but cables from Shanghai during the last few days have been more encouraging. Shippers to the Near East have again asked manufacturers to defer deliveries. A few more lines have been booked in home trade fabrics. It is held in many quarters that the lack of enterprise on the part of merchants is largely due to questions of finance. American yarns for home use have been irregular in price when tested, and operations in all quarters have been restricted. The margin of profit for spinners is being narrowed. Export bundles have attracted very little attention. No relief has come round for Egyptian spinners, and rates continue to favour buyers.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—There is a slightly better tone in the market here, due probably to the improved demand for medium crossbred wool at the London Colonial wool sales. The actual volume of business passing, however, is still very small; in fact, there is not enough to test prices, and quotations are very largely nominal. Good average 64's tops are quoted around 8s, and 2-48's yarn out of this quality may be quoted at about 16s. There is very little doing in English wools in this centre, but high prices are being paid for Downs in the country, and it is understood that hosiery spinners are doing most of the buying. With regard to the purchase of wool by a Bradford syndicate, one has reason for stating that a considerable amount of Colonial wool, probably about 100,000 bales, has been bought by a few firms during the past three months. The wool has been purchased from the Government at the reserve price, and it is understood that the bulk of it will go to the Continent. It should be mentioned, however, that the whole transaction has been carried through in the ordinary way of business, and the principals are naturally unwilling to disclose details as to the arrangements which they are making.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The sixth series of Government Colonial wool sales for the current year opened in London last Tuesday, about 90,000 bales being scheduled for the nine days' selling period. Next Saturday (17th instant) about 15,000 bales of New Zealand crossbreds will be offered on description, so that in spite of reduced offerings a fair test of values will be afforded. On the opening day some good useful merinos and crossbreds were offered. The attendance both of home and Continental buyers was large, the latter showing a fair amount of interest. The series should benefit by the improvement in the French rate of exchange, the franc being quoted last Tuesday at 45.90 to the pound, against 51.33 at the close of last series. The need for raw material on the Continent is great, and an improvement in the exchange should help to bring more Continental competition into the market. The opening was somewhat "gingerly," but quite as good as the majority expected. Not much change took place in prices for the best shafty grease combing merinos, but all other descriptions lost 5 per cent. Scoured merinos were more or less neglected, medium to fine crossbreds were also unchanged, but there was no competition for coarse wools. The worst feature of the opening night was the large withdrawals, about two-thirds of the quantity offered failing to reach the Government reserves. The Department will soon have to consider seriously the lowering of their limits. They cannot continue indefinitely to withdraw their wool. The whole trade has a perfect right to share in the benefits of any reduced limits. It is unfair to allow individual buyers to clear withdrawn lots unless they are prepared to pay the reserve price. The absence of American competition is certain to affect the better-class merinos, but these cannot fall a great deal, and buyers should be aware of the fact that the bulk of the Government wool, apart from the new clip, consists of short, faulty merinos and coarse crossbreds, the very wool that Germany and other Continental countries could use. The indifference of American buyers has caused surprise, but many American mills are reported to be either working short time or standing indefinitely. The maintenance of present values is doubtful, but if increased competition could be secured an improvement would take place.

The West Riding industry has been greatly interested in a reputed sale of 100,000 bales of wool, which is said to have been acquired by a syndicate of Bradford buyers for shipment to the Continent. The truth of the story is doubted, and instead of 100,000 bales of the wools withdrawn from the last series being purchased, the real facts probably are that three or four of the biggest wool firms have agreed to finance at least one large spinners' and manufacturers' association in Czecho-Slovakia on mutually favourable terms. It is not necessary to go into details. Suffice it to say that the deal shows the British and French Governments how to revive trade with starving Europe. The market cannot recover as it should unless ways and means can be devised for financing wool and opening the way for competition on the part of Central Europe. A

(France) Ltd. Deposits are received for fixed periods on terms which may be ascertained on application.

new basis of values is being set up, and it will be a pity if, when prices have fallen to the bottom, the British Government are compelled to sell their big holding at cost price. It should be possible to inaugurate a scheme to enable Central European mills to come into the market, thereby saving the entire textile industry from disaster.

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

The markets for linseed and the oil product have again taken an easier turn, the depression noted in last report having been accentuated by the operations of speculators in oil, the value of which, ex mill Hull, was in the early days of this week fully £8 per ton below the level reached a few days ago. Current quotations for raw oil, however, are such that a revival of consumptive demand may be expected, though the disposition of most consumers at home at least is to buy only for immediate requirements. The unsteadiness is naturally reflected in the seed market, where even though linseed is £3 to £4 per ton lower on the week, due to easier freights, lower Plate options and the poor demand for oil, there is a marked indisposition to trade. Linseed continues to come along freely, arrivals being good and stocks in hand ample. The quantity on passage to the United Kingdom is about 26,500 and to the Continent 25,000 tons. The Indian crop is moving off steadily, but in this quarter and the Argentine considerable quantities are still to come on to the market.

The inquiry for cotton oils has fallen away somewhat, and prices are again a turn easier and lower. Offers of Egyptian cottonseed are few and value maintained, but Bombay exhibits further weakness, having receded to £11 on spot at Hull, with £12 asked for shipment. Most of the vegetable oils are quiet and trade restricted, with values barely steady. The production of oilcakes is in excess of demand, and a fair trade is being done in linseed round £20 per ton, ex mill. Cotton and other cakes are in poor request, notwithstanding prices are low, and compare very favourably with other feeding stuffs.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Prices at the local auction for market hides and skins were, generally speaking, just a shade easier at the local auctions held here in Bermondsey on Thursday of this week. The three top weights in best ox and heifers made from 5/8d to ¼d per lb less money, while the two top weights in the seconds advanced slightly. Cows, on the whole, were firmer, while bulls were unchanged at last week's quotations. Prices of calf skins were weaker, the light weights falling away considerably. Sheep skins sold at last week's prices to a shade advance. Foreign hides continue a slow sale, as English tanners show little or no interest in these goods, and even where bids are made the figures are such that importers cannot accept same. Practically the only operators at the point of origin are American tanners, and with hardly any competition prices have a tendency to weaken. Recent cables from the United States are to the effect that the market there is a little firmer, and more sales are reported.

The demand for sole leather during the past week has again been on the dull side, the only orders received being of a hand-to-mouth nature, and only just sufficient to cover immediate requirements. Bulk orders are out of the question, as the larger buyers continue to remain out of the market, perhaps very rightly thinking that leather prices have not yet reached their lowest point. It is reported, however, that certain grades of common bends are inquired after, and where sales have been effected it has been at full asking prices. This, however, only refers to the particular class of goods mentioned, as better-grade bends have received little inquiry, while bellies and shoulders are a difficult selling line. The only sign of business in regard to rough dressing leathers is in connection with split hides, and I understand that parcels of these have changed hands at prices which show further reductions.

The upper leather section is in a similar position to that of sole leather, and importers and merchants report a very slow sale, with any inquiry centred around the common grades of box sides, and suède leathers in grey. Good quality box calf and glacé kid receives very little attention, and it is only here and there that a small parcel changes hands. No demand is noticeable for waxed kip butts.

Shoe manufacturers in most districts are in a very bad way so far as fresh orders are concerned, and find it impossible to keep their factories running anything like full time.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, July 9.

Quiet trading was again in force throughout the week, with consumers showing no desire to exceed pressing requirements, and prices, while irregular, marked further declines in some instances. Tea is selling well for all attractive lots, but common and rough picked meet a poor reception at irregular and lower values. Both coffee and cocoa show a weak tendency under an almost entire lack of export support. In the case of the former, some consignments forwarded to near Continental distributing centres have found their way back to the London market, in the hope of finding an outlet. Fibres generally quiet, but prices for jute improved after declining heavily, the recovery being due to cessation of selling orders and a desire shown to cover. Manila hemp is firm, but there is no demand at the moment for East Indian.

SUGAR.—Market unchanged, with fair allotments made on vouchers. Free lots neglected at the moment, and crystallised West India only sold in retail quantities at 137s to 141s. Muscovado very quiet. Honey steady in value despite a quiet trade in force, while American syrup is difficult to place.

COFFEE in retail support, and most of the moderate offerings auctioned bought in this week. Prices were without material change, but tending lower. The terminal is unsettled. December sold, 76s to 78s and 76s.

COCOA inactive, and quotations quite nominal in absence of support.

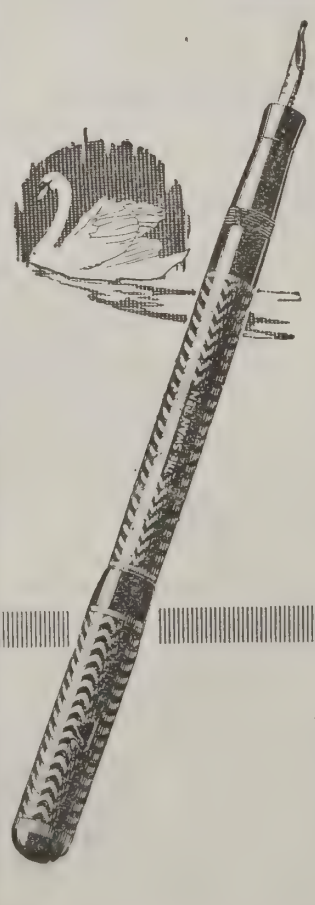
TEA.—During the week 34,000 packages Indian and 22,200 packages Ceylon were offered, and while all really good to fine liquoring lots sold well at a firm range, low medium and common proved quiet and irregular.

RICE.—Market steady, quiet, but bran sells very slowly. Beans quiet.

SPICE.—Quiet trading resulted in pepper at barely steady rates. Fair black Singapore, spot, sold, 6d; ditto, August-October and September-November, steamer, 6¼d to 6d; Lampong, spot, 6⅜d; Aleppy, 7d; Tellicherry, 7½d; white Singapore, 11d; Muntok, 11½d; ditto, August-October, buyers, 10⅜d; and November-December sold, 10⅛d. Zanzibar cloves, spot, 1s 5d to 1s 6d. Pimento sold, 4½d to 4d. Tapioca dull. Fair flake, spot, sold, 2d; ditto, August-October, steamer, 21s 6d; fair Penang seed, spot, 25s; August-October, 24s; small sago, August-October, 32s; sago flour, spot, sold, 19s 6d; ditto, August-October, 18s 6d. Farina, spot, 27s; and August-October, 26s. Desiccated cocoanut, coarse cut, on spot, sold, 62s to 61s; fine cut, 65s; and medium at 70s.

JUTE.—After opening the week with a flat tone, new crop ruled firmer. Old crop quiet, with spot sales on the basis of £44 to £45 for approved native first marks assortment. New actual firsts, August-September, sold, £48 to £49, and £48 10s and £51. Hessians and also twills very dull, with quotations mainly nominal.

HEMP.—Manila firm, but quiet, and J grade, August-October, sold, £63 10s to £64; K, August-October, £53 to £54; L, ditto, £52 to £53. New Zealand dull, and fair dock sold, £51. East Indian and also Italian neglected at the moment.



SHELLAC.—Market hardened under increased buying, but denoted some irregularity. Fair T.N., spot, sold, 670s to 680s; August, 675s, 695s, 690s, and 695s; October, 590s to 615s, 610s, and 630s.

COPRA very quiet, and prices somewhat irregular. F.M. Straits, August-October, London, sold, £47 10s to £46 10s and £47; ditto, F.M., August-October, Marseilles, at £47 10s to £47. Near continent quite nominal. Palm kernels flat. July-September sold, £31 to £30 10s.

EGG PRODUCTS.—Market very slow. Liquid yolk, spot, sold, 72s 6d; liquid whole egg at 70s per cwt; dried yolk, spot, 9d; native dried whole egg, 9d; spray, 1s 9d; albumen, spot, 4s per lb.

MENTHOL dull, and Kob-Suzuki, spot, 27s 6d; Yazawa, 25s; peppermint oil, 9s and 8s 6d respectively; aniseed, 4s; slab camphor,

"SWAN"
FOUNTPENS

Express your individuality when writing your letters. The "Swan" Pen lends itself to the writer and is always responsive to his or her moods. Its smooth gold nib glides over the paper without effort, expressing one's thoughts almost unconsciously.

Prices 12/6, 15/-, 21/-, 25/-, 30/-, upwards.
Sold by Stationers and Jewellers.
Catalogue post free on request.

MABIE, TODD & Co., Ltd., Swan House, 133-135, Oxford Street. London, W.1. Branches: 79 & 80, High Holborn, W.C.1; 97, Cheapside, E.C.2; 95a, Regent Street, W.1, and at 3, Exchange Street, Manchester. Paris, Brussels, Zurich, Sydney, Toronto and Cape Town.

6s 7½d to 6s 6d and sellers; crude, spot, 3s 9d; and August-October, 3s per lb.

RUBBER quiet, and prices after being firm became weaker. Plantation crepe, spot, sold, 2s to 1s 11⅜d; October-December, 2s 2½d and 2s 2d; January-March, 2s 3½d to 2s 3d; January-June, 2s 4d to 2s 3½d; and sheet, spot, 1s 11d to 1s 10½d. Fine hard Para, spot, value, 1s 11⅜d.

OILS.—Linseed quiet and easier. Spot, net, naked, 72s; July-August, 70s 6d; September-December sold, down to 68s 6d. Rape lower. Crude, spot, 75s; refined, 80s. Cotton neglected and easier. Crude Egyptian, 65s; Bombay, 55s; refined edible, 85s. China wood easier. Hankow, spot (barrels), sold, 118s to 115s; July-August, 90s; and Hong Kong, spot, 115s to 113s. Palm kernel quiet. Crushed, spot, 65s; extracted, 64s. Palm slow. Softs, July-August, 52s 6d; Lagos, 55s. Cocoanut dull and weak. Ceylon, spot, sold 80s; July-August, 78s; Cochin, ditto, 82s. Soya easier. Oriental, afloat and July-August, 69s; deodorised, 90s. Japan fish easier, with sales, July-August (cases), at 45s to 40s. Cod liver steady. English, spot, sold, 50s. Ground nut quiet. English crushed, naked, spot, 78s; deodorised (barrels), 90s. Turpentine irregular, but firmer. American, spot, 165s; July-August, 160s; July-December, 150s; September-December, 141s. Rosin slow. American, grade B, 45s; F, 56s; G, 56s; K. 57s; M, 57s 6d; WW, 59s; French, F/G, 55s; H, 56s 6d; WW, 58s; extra pale, 60s; Spanish, c.i.f., London, grade F, 43s; extra WW, 47s per cwt. Petroleum steady, quiet. American, spot, 2s 1¾d; and water white, 2s 2¾d per gallon.

OILSEEDS.—Linseed market depressed and values lower. Calcutta, June-July, quoted £36; July-August and August-September sold to £35 10s; Bombay, July-August quoted £36 5s. Plate afloat, Hull sold £32 to £31 10s; July-August, £33 to £31, and £31 5s. Rapeseed flat. Toria, July-August, Hull, sellers, £31; Real bold Ferozopore, £29; brown Cawnpore, £28. Cottonseed quiet. London Egyptian f.a.q., spot, quoted £18 5s; July-August, £18 10s to £18, paid; Bombay, spot, old, Hull, sold, £10; ditto new, £11; July-August, £11 15s Castorseed inactive. Bombay, July-August, Hull, sellers, £29. Gingelly steady, quiet. Chinese, July-August, to continent, sellers, £40. Groundnuts slow. Chinese, dry decorticated, June-July, £37 10s per ton.

METALS.—Tin relapsed until Tuesday last on selling desire and slackness of demand, cash at one time fluctuating down to £245, and three months to £251; but the downward tendency was subsequently arrested, while these dates by the middle of the week reached £248 and £255 10s respectively, dealings being upon a small scale. At Friday's session the tendency was in an upward direction, with again little done. Cash registered £252 to £259; and three months, £258 to £264. Copper: The standard market declined until Tuesday under realisations, business being of small dimensions, cash by Tuesday moving down to £87, and three months to £89 5s, these positions by the middle of the week improving to £87 10s and £90. Friday's

Fire Proof since 1858 **THE CHATWOOD SAFE** *Burglar Proof since 1858*

THE man who buys a "cheap" safe in order to save money is like the man who stopped the clock in order to save time.

The real value of a safe lies in the degree of security rendered when it is attacked by Fire or Burglars—and not in its *first cost.*

THE CHATWOOD SAFE offers the highest degree of security obtainable at *any* price.

market hardened, and a moderate amount of business resulted. Cash reached £90, three months being sold at £92 10s. Lead easier, while dearer on Friday. July sold at £33 15s; August, £34 15s; official, £33 15s to £35 10s. Spelter weaker, the market being better on Friday, and August done at £42 to £42 10s; October, at £43 10s; official quotations, £42 to £43 10s. Antimony. regulus, English ordinary to best, £60 to £63. Quicksilver quiet at £21 per bottle.

TALLOW. — Messrs Colchesters and Woolner write on 7th July as follows:—The tallow market has been quiet during the week, with prices 2s lower to-day. As prices recede, there is a slow but gradual increase in the amount of business taking place. The stock in London on June 30th, as returned by the wharves, amounted to 26,989 packages, being a decrease during the month of 1,668 packages. At auction to-day 863 casks tallow were offered, and 62 were sold. Quotations are: — Australian mutton: Fine, 73s; good to fair, 70s to 68s; dull to dark, 63s to 60s; hard, 72s. Australian beef: Fine, 70s; good to fair, 68s to 66s; dull to dark, 60s to 58s; sweet, 72s 6d. Present shipment from Australasia: Mutton, fair coloured, 48 degs. none; and mixed, 43½, c.i.f., London, 69s. The market letter is unchanged for tallow, stuff 2s lower. Town tallow, 67s per cwt. Rough fat per 8 lbs, 8½d to 1s 4½d; melted stuff, 48s per cwt. Quotations are:—Town: 63s net cash, naked, ex works. Country: Frail casks, 61s; home melted, shipping casks, net f.o.b., good coloured none; fair to dull, 65s to 62s. Bone fat: white, none; pale, 60s; benzine, 54s; melted stuff, 54s, f.o.b.

The List for Conversion Applications will be closed on or before Wednesday, the 21st July, 1920.

GOVERNMENT of VICTORIA 6¼% CONVERSION LOAN, 1923-1925.

Offer of Conversion to Holders of Victorian Government 4% Inscribed Stock maturing 1st October, 1920.

PRICE £100 PER CENT.

Interest payable 1st APRIL and 1st OCTOBER. First Six Months' Interest payable 1st APRIL, 1921.

Principal repayable on 1st October, 1925, the Government having the option of redemption in whole or in part, at par, on or after the 1st October, 1923, on giving three months' notice.

The Government of Victoria will comply with the requirements of Colonial Stock Act, 1900, in order that **Trustees may invest in this Stock** subject to the provisions set forth in the Trustee Act, 1893.

The London County Westminster and Parr's Bank Limited is authorised by the Government of Victoria to offer to the holders of £5,949,700 outstanding 4 per cent. Stock, due 1st October, 1920, conversion at par to the extent of £2,725,000 into Victorian Government 6¼ per cent, Inscribed Stock. The three months' Interest due 1st October, 1920, on the 4 per cent. Stock will be paid on that date to holders converting.

Holders of Stock converting must lodge the prescribed forms of assent with the London County Westminster and Parr's Bank Limited, Lothbury.

Any portion of the Stock not converted will be paid off at the London County Westminster and Parr's Bank Limited on the 1st October, 1920.

The Loan is made under the Act of the Victorian Legislature No. 1,560.

The Stock will be inscribed in accordance with the provisions of "The Colonial Stock Act, 1877," 40 and 41 Vict., cap. 59, in the books of the Victorian Government 6¼ per cent. Inscribed Stock, 1923-1925—to be kept by the London County Westminster and Parr's Bank Limited—and will be transferable without charge and free of stamp duty at that Bank, either by the Stockholders personally or by their Attorneys. The interest, at the rate of 6¼ per cent. per annum, will be payable half-yearly on behalf of the Government of Victoria at the London County Westminster and Parr's Bank Limited, Lothbury, on the 1st April and 1st October in each year, by Dividend Warrants, which will be forwarded by post at the Stockholder's risk. The principal will be payable at the same Bank on the 1st October, 1925, but the Government of Victoria have the option of redemption, in whole or in part, at par, in London, on or after the 1st October, 1923, on giving three calendar months' notice.

In accordance with the provisions of the Redemption Fund Act of the Victorian Legislature. 62 Victoria, No. 1,561, the sum of ten shillings per cent. of the amount of Stock will be provided annually towards the redemption of such Stock.

The revenues of the State of Victoria alone are liable in respect of this Stock and the Dividends thereon, and the Consolidated Fund of the United Kingdom and the Commissioners of His Majesty's Treasury are not directly or indirectly liable or responsible for the payment of the Stock or of the Dividends thereon, or for any matter relating thereto.—40 and 41 Vict., cap. 59, sec. 19.

Prospectuses and Forms for Conversion can be obtained at the London County Westminster and Parrs' Bank. Limited, 41, Lothbury, E.C. 2., 21, Lombard Street, E.C.3, or at any of the Branches of the Bank.

SOUTHERN PACIFIC CO.

REPORT OF THE BOARD OF DIRECTORS.

To the Stockholders of the Southern Pacific Company: New York, N.Y., June 17, 1920.

Your Board of Directors submits this report of the operations and affairs of the Southern Pacific Company and of its Proprietary Companies for the fiscal year ended December 31, 1919.

The Federal Government, which took over the railroad and steamship lines of your Company on December 28, 1917, as explained in last year's report, continued, during the year 1919, in the possession and control of your Company's properties.

The following table shows the results of Federal operation of your Company's lines during 1919, compared with the results of Federal operation during 1918:

	Calendar Year 1919.	Calendar Year 1918.	+ Increase. — Decrease.	Per Cent.
1. Average miles of road operated	11,043.11	11,101.54	— 58.43	.53
Railway Operating Revenues—				
2. Freight	$163,011,660 07	$151,079,622 80	+ $11,932,037 27	7.90
3. Passenger	59,371,140 37	53,247,921 76	+ 6,123,218 61	11.50
4. Mail and Express	7,838,257 82	7,839,380 77	— 1,122 95	.01
5. All other transportation	2,446,116 63	3,548,305 77	— 1,102,189 14	31.06
6. Incidental	6,886,516 60	5,851,254 45	+ 1,035,262 15	17.69
7. Joint facility—Credit	128,988 99	83,207 96	+ 45,781 03	55.02
8. Joint facility—Debit	*25,408 13*	*38,487 30*	+ 13,079 17	33.98
9. Total railway operating revenues	$239,657,272 35	$221,611,206 21	+ $18,046,066 14	8.14
Railway Operating Expenses—				
10. Maintenance of way and structures	$34,799,542 71	$25,824,725 78	+ $8,974,816 93	34.75
11. Maintenance of equipment	47,969 373 75	40,747,834 97	+ 7,221,538 78	17.72
12. Total Maintenance	$82,768,916 46	$66,572,560 75	+ $16,196,355 71	24.33

15. Miscellaneous operations	4,231,266 21	3,330,398 66	+ 900,867 55	27.05
16. General	4,880,882 38	4,925,247 01	— 44.364 63	.90
17. Transportation for investment—Credit	*590,435 63*	*440,092 93*	+ 49,657 30	11.28
18. Total railway operating expenses	$186,927,482 51	$162,722,371 84	+ $24,205,110 67	14.88
19. Net revenue from railway operations	$52,729,789 84	$58,888,834 37	— $6,159,044 53	10.46
20. Railway tax accruals	$9,478,376 72	$9,398,681 08	+ $79,695 64	.85
21. Uncollectable railway revenues	51,694 91	59,675 69	— 7,980 78	13.37
22. Railway operating income	$43,199,718 21	$49,430,477 60	— $6,230,759 39	12.61
23. Equipment rents (Net credit)	378,081 20	3,661,808 59	— 3,283,727 39	89.68
24. Joint facility rent (Net credit)	*§9,423 90*	195,089 66	— 204,513 56	104.83
25. Net of items 22, 23 and 24	$43,568,375 51	$53,287,375 85	— $9,719,000 34	18.24
26. Miscellaneous income	418,906 59	104,901 62	+ 314,004 97	299.33
27. Expenses in excess of revenues prior to January 1, 1918, included in above but charged against the corporation	*§76,977 51*	2,533,000 13	— 2,609,977 64	103.04
28. Net income from Federal operations	$43,910,304 59	$55,925,277 60	— $12,014,973 01	21.48
29. Standard return	48,244.660 03	48,167,342 56	+ 77,317 47	.16
30. Standard return in excess of Federal income for 1919	$4,334,355 44			
31. Federal income for 1918, in excess of standard return		$7,757,935 04		

*Debit. § Represents revenues in excess of expenses prior to January 1, 1918, included in above statement, but credited to the corporation. ‡ Represents the annual compensation payable by U. S. Government for use of Southern Pacific Transportation System, as fixed in the agreement with the Director General of Railroads

Following is a summary of operating revenues, operating expenses, and net revenue from railway operations for years 1919 and 1918 under Federal control; also, for comparative purposes, for the year 1917—the last year of private operation preceding Government control:

	1919	1918	1919 Compared with 1918 + Increase. — Decrease.	Per Cent.	1917
Operating revenues	$239,657,272 35	$221,611,206 21	+ $18,046,066 14	8.14	$193,971,489 54
Operating expenses	186,927,482 51	162,722,371 84	+ 24,205,110 67	14.88	120,601,822 82
Net revenue from railway operations	52,729,789 84	58,888,834 37	— 6,159,044 53	10.46	73,369,666 72
Operating ratio, Pct.	78 00	73 43	+ 4 57	6.22	62 18

The above table illustrates the disproportionate increase in expenses compared with revenues and the fall in net despite higher gross. In 1919 after paying expenses of operating, there was left out of each dollar of revenue only 22 cents, compared with 38 cents remaining in the last year previous to Federal control.

Comparing 1919 with 1918, the increase in operating revenue of $18,046,066.14, or 8.14 per cent., resulted principally from the fact that passenger and freight rates were not increased until June of 1918 and the beneficial effect of this increase was felt in only half of that year.

There was a decrease of 6.52 per cent. in ton miles of revenue freight, attributable chiefly to the diversion of traffic from your lines during the whole of 1919, which was practised during only a part of 1918. This diversion of traffic during the operation of your lines by the Government resulted from the closing of traffic agencies; the disturbance of relationship of both rates and service, and arbitrary routing of freight by Governmental agencies.

The revenue passengers carried one mile increased 7.28 per cent. which partially offset the decrease in the volume of freight business, and was due to the transportation of discharged and furloughed soldiers and to the general prosperity of the people of the country.

The increase of $24,205,110.67, or 14.88 per cent., in operating expenses, compared with a decrease of 5.71 per cent. in train mileage, was due principally to additional increases in wages and prices of material, the effect of these increases over previous year being:

Increased wages	$11,420,000
Increase in price of fuel	2,534,500
Increase in prices of other materials	4,879,000
Total increase in wages and material prices	$18,833,500

The annual report showed increases in 1918 over 1917 from these causes amounting to $34,338,000, the total increase in wages and material prices in the two years of Federal control, therefore, being $53,171,000, which increased operating expenses substantially forty per cent.

There was an increase of $5,371,611 in operating expenses in 1919 over 1918 not accounted for by increased wages or prices.

Considerable improvement due principally to reduction in speed and to superheating was effected in fuel consumption in 1919 over 1918, which year had fallen below the record of the year previous. The gross ton miles moved per pound of coal (oil equated to coal on basis of four barrels of oil to one ton of coal) were:

	Passenger Service	Freight Service
1919	5.08	6.67
1918	5.05	6.06
1917	5.10	6.11

Other transportation results for the year 1919 were as follows:

	Tons All Freight per Loaded Car	Per Cent loaded to Total Freight Car Miles	Tons All Freight per Train	Passengers per Train
1919	25.42	69.74	641.41	81.76
1918	26.98	71.02	641.28	73.27
1917	25.34	72.14	602.98	62.82

PROPERTIES AND MILEAGE.—The transportation lines of the Southern Pacific Company, and of certain affiliated companies herein referred to as "Proprietary Companies," constituting the Southern Pacific System, operated by the Government at December 31, 1919, were as follows:—

Total miles of road operated by Government at December 31, 1918	11,085·32	763·62	† 4.235·88	18·90	4,525·00
Increase	4·36	7.98	13·12	..	..
Average miles of road operated by Government during year 1919	11,043.11	771·13	..	..	..

*Includes 2·48 miles owned jointly with other companies, 4·37 miles leased from other companies, and 79·27 miles operated under trackage rights; and excludes 41·34 miles of owned lines leased to other companies. † Excludes .49 miles of siding at Maricopa, Arizona, owned jointly by Arizona Eastern R.R. Co. and Southern Pacific R.R. Co. which was duplicated in last year's report.

In addition to the mileage above tabulated, the Southern Pacific Company solely controls through ownership of capital stock 863·89 miles of Affiliated Companies and 1,240·52 miles of the Southern Pacific R.R. Co. of Mexico, and jointly controls (through ownership of capital stock in equal proportions with the Atchison, Topeka & Santa Fe Railway Company) 523·46 miles of the Northwestern Pacific Railroad, and 59·66 miles of the Sunset Railway, a grand total of 13,777·21 miles.

* Represents the annual compensation payable by U.S. Government for use of Southern Pacific Transportation System, as fixed in the agreement with the Director General of Railroads. † This year's figures include $334.00, and last year's figures, $454.00, representing dividends on stocks of Proprietary Companies held by the Public.

The increase of $77,317.47 in Standard Return (line No. 1) is due to the fact that the amount of the standard return of the Southern Pacific Terminal Company shown in last year's report was based on the compensation for terminal properties operated by the Director General; while the figures for this year include the compensation for Terminal Company properties leased to the public, as well as for those operated by the Director General, such leased properties having been included in the agreement with the Director General executed January 10, 1920. This increase is partially offset by a decrease of $38,303.12 in Misoellaneous Rent Income, representing the rental for last year from such leased properties, which was dealt with in last year's report as accruing to the Company.

As complete data is not yet available for the computation of interest on the accounts with the Government, or for the computation of the additional compensation payable to the Company for use of additions and betterments, new equipment, and road extensions completed during Federal control, the income statement does not include any amount representing such interest or such additional compensation. It is estimated, however, that the interest due to the Company is in excess of that due to the Government; and that a considerable amount of additional compensation is due to the Company under the terms of our contract with the Director General.

OPERATING INCOME.

Of the increase of $1,926,919.88 in Miscellaneous Operating Income (line No. 6) $1,925,629.63 represents the increase in the net operating income of the California Fuel Oil Department, the result, principally, of an increase of 1,418,000 barrels, or 20 per cent. in sales of produced oil, and of an increase of 15 85 cents in the average price per barrel due to an advance of 25 cents per barrel in the price of produced oil which went into effect in May, 1918. The decrease in gross revenues from, and in expenses of, Miscellaneous Operations (lines Nos. 2 and 3), is due to the fact that during the year 1919 the Federal Administration purchased from the Fuel Oil Department only a small amount of fuel oil other than that produced from the Company's own wells, with the result that the Fuel Oil Department's dealings in purchased oil decreased 6,529.000 barrels, or about 79 per cent.

The increase of $47,293.75 in Miscellaneous Rent Income (line No. 9) is the result, principally, of an increase of about $90,000 in rent received for use of property not required for railway operations, caused by an increase in the rental rate, less the decrease of $38,303.12 on account of rental for last year from properties of the Southern Pacific Terminal Company, which was dealt with in last year's report as accruing to the Company instead of to the Director General, as explained above

The decrease of $60.612.43 in Miscellaneous Non-operating Physical Property (line No. 10) is due, principally, to a decrease in the net income from lands belonging to Central Pacific Railway Company and pledged under that company's Three and One-half Per Cent. Mortgage.

The decrease of $25,266.78 in Separately Operated Properties—Profit (line No. 11) represents this Company's proportion of the decrease in profits from operation of Pintsch gas plants at Houston and Portland.

The increase of $145,607.27 in Income from Funded Securities—Investment Advances (line No 14) is the result, principally, of crediting to income this year interest on investment advances which were repaid during the year.

The decrease of $200,529.66 in Income from Unfunded Securities and Accounts (line No. 15) is due, principally, to a decrease in the interest received on bank balances.

The increase of $104,498.47 in Miscellaneous Income (line No. 17) represents, principally, the gain in exchange on funds remitted to Paris in payment of interest on Central Pacific Railway Company Four Per Cent. Thirty-Five Year European Loan bonds.

The credits to Revenues Prior to January 1, 1918 (line No. 18), and the debits to Expenses Prior to January 1, 1918 (line No. 31), represent, respectively, the collection and payment during the year, through the Federal Administration, of revenues and expenses, commonly called "lap-over" items, applicable to the period prior to January 1, 1918. For the reasons set forth in the last paragraph on page 15 of last year's report the treatment of these items as credits and debits to income, as required by the Interstate Commerce Commission, has had the effect of understating the income for last year by $2,533,000.13, and of overstating the income for this year by $76,977.51.

DEDUCTIONS FROM GROSS INCOME.

The decrease in Rent for Leased Roads (line No. 21) is the result, principally, of a rental payment made last year, covering rental accrued prior to January 1, 1918, which had been in controversy for several years.

The increase of $127,284.60 in Miscellaneous Rents (line No. 22) represents, principally, an increase in rental for pipe line used by the Fuel Oil Department.

Of the decrease of $1,065,982.47 in Interest on Funded Debt—Bonds and Notes (line No. 25) the sum of $920,429.89 is due to the conversion of Southern Pacific Company Four Per Cent. and Five Per Cent. Convertible Bonds into common stock: and the remainder is due to the retirement of bonds, principally through accretions to sinking funds.

The increase of $228,714.31 in Interest on Unfunded Debt (line No. 27) represents, principally, interest paid on funds borrowed for the purchase of Liberty Loan Bonds.

The increase in Corporate Operating Expenses (line No. 29) is due to the fact that such expenses for the period from January 1, 1918, up to the time of the appointment of Federal Managers, in the latter part of June, 1918, were borne by the Federal Administration.

The increase of $1,073,949.87 in Dividend Appropriations of Income (line No. 35) is due to the issue of Common stock against Southern Pacific Company Four Per Cent. and Five Per Cent. Convertible Bonds surrendered and cancelled.

On December 31, 1919, the principal of advances to the Southern Pacific Railroad Company of Mexico amounted to $39,546,127.19. Interest accruing on these advances has not been taken into the income of the Southern Pacific Company.

CAPITAL STOCK.

The capital stock of the Southern Pacific Company outstanding at the beginning of the year amounted to		$276,442,905 64
Issued during the year:		
Common stock issued at 130 in exchange for $26,657,150.00, par value, Four Per Cent. Twenty-Year Convertible Gold Bonds and Bond Scrip, at par, surrendered and cancelled	$20,505,500 00	
Common stock issued in exchange for a like amount of Five Per Cent. Twenty-Year Convertible Gold Bonds surrendered and cancelled	5,076,500 00	25,582,000 00
Amount of Southern Pacific Company capital stock outstanding December 31, 1919		$302,024,905 64
There was no change during the year in the capital stocks of the Proprietary Companies. The amount outstanding December 31, 1919, was as follows:		
Preferred stock	$29,400,000 00	
Common stock	317,432,400 00	$346,832,400 00
Capital stocks of Proprietary Companies outstanding Dec. 31, 1919, were held as follows:—		
In hands of public		$76,100 00
Owned by Southern Pacific Company	$346,455,300 00	
Owned by Morgan's Louisiana & Texas Railroad & Steamship Company	300,000 00	346,756,300 00
		$346,832,400 00

SOUTHERN PACIFIC COMPANY AND PROPRIETARY COMPANIES COMBINED—*continued.*

FUNDED DEBT.

The funded and other fixed interest-bearing debt of the Southern Pacific Company and of its Proprietary Companies outstanding December 31, 1918, was as follows:

Southern Pacific Company	$201,189,710 00	
Proprietary Companies	445,298,789 78	
Total outstanding December 31, 1918		$646,488,499 78

Retired during the year:

SOUTHERN PACIFIC COMPANY.			
Four Per Cent Twenty-year Convertible Gold Bonds: Retired at par in exchange for $20,505,500.00 par value common stock issued at 130		$26,657,150 00	
San Francisco Terminal First Mortgage Four Per Cent Bonds: Purchased from payments to sinking fund		$6,300 00	
Five Per Cent Twenty-year Convertible Gold Bonds: Retired in exchange for a like amount of Common Stock issued		5,076,500 00	
Equipment Trust Certificates:			
Series A, Due March 1, 1919, paid off	$1,012,000 00		
Series B, Due September 1, 1919, paid off	201,000 00		
Series C, Due December 1, 1919, paid off	117,000 00		
Series D, Due May 1, 1919, paid off	511,000 00	1,841,000 00	
CENTRAL PACIFIC RAILWAY COMPANY.			
First Refunding Mortgage Four Per Cent. Bonds: Purchased from payments to to sinking fund	$31,000 00		
Three and One-half Per Cent. Mortgage Gold Bonds:			
Purchased from proceeds of sale of lands	$372,000 00		
Purchased from payments to sinking fand	29,000 00	401,000 00	432,000 00
OREGON AND CALIFORNIA RAILROAD COMPANY.			
First Mortgage Five Per Cent. Bonds: Purchased from payments to sinking fund		140,000 00	
Carried forward		$34,152,950 00	$646,488,499 78
Brought forward		$34,152,950 00	$646,488,499 78
SOUTH PACIFIC COAST RAILWAY COMPANY. First Mortgage Four Per Cent Bonds: Purchased from payments to sinking fund		227,000 00	
SOUTHERN PACIFIC RAILROAD COMPANY. First Refunding Mortgage Four Per Cent. Gold Bonds: Purchased from payments to sinking fund		15,000 00	
TEXAS AND NEW ORLEANS RAILROAD COMPANY. Payment to State of Texas account of School Fund Debt		4,888 05	
Total retired during the year			34,399,838 05
Amount of funded and other fixed interest-bearing debt of the Southern Pacific Company and of its Proprietary Companies outstanding December 31, 1919			$612,088,661 73

The outstanding securities are held as follows:—

In hands of public		$509,765,445 31
Owned by Southern Pacific Company	$87,119,216 42	
Owned by Proprietary Companies	2,337,000 00	
Held in Sinking Funds of Proprietary Companies	12,867,000 00	102,323,216 42
Total		$612,088,661 73

As a result of protracted negotiations your Company has entered into an agreement, dated January 15, 1920, with the Director General of Railroads providing that payment for the 1,000 box cars, which the Company was compelled to take over from the Director General as explained on page 10 of last year's report, is to be made in fifteen equal annual instalments, evidenced by Equipment Trust Notes, dated January 15, 1920, divided into fifteen series, each for an aggregate principal amount equal to one-fifteenth of the total purchase price of the equipment, maturing, respectively, on the 15th day of January in each of the years 1921 to 1935, both inclusive, with interest at 6 per cent. per annum, payable semi-annually on January 15th and July 15th in each year. The agreement stipulates that while the precise purchase price of the 1,000 cars has not been finally computed it shall not be less than $2,815,000 nor more than $3,072,450. The minimum purchase price of $2,815,000 has been paid by the execution of notes aggregating $2,814,000, and the payment of $1,000 in cash; and upon the delivery of a certificate of the Director General and the manufacturers of the equipment, on or before August 1, 1920, specifying the total purchase price of such equipment, additional notes are to be executed and delivered to an aggregate amount equal to the difference between the total purchase price, as specified in such certificate, and the minimum purchase price. The aggregate amount of all notes to be executed and delivered under the agreement shall not, however, in any event, exceed the maximum purchase price of $3,072,450.

(a) The outstanding capital stock and funded debt include capital stock and funded debt of Proprietary Companies of the par value of $346,756,300 and $102,323,216.42, respectively, a total of $449,079,516.42, which securities are owned by the Southern Pacific Company or by Proprietary Companies, or are held in sinking funds of Proprietary Companies. The cost of these securities is included in the investments shown above. Of the said amount, stocks of the par value of $249,653,161, which stand charged on the books at $232,932,667.41, are pledged against the issue of Southern Pacific Company stock and bonds. (d) Represents accrued depreciation on electric power plants and substations, general office building at San Francisco, wood preserving works, Sacramento rolling mill, oil storage plants, grain elevators, and similar facilities. (e) Represents accrued depreciation on oil lands and improvements acquired from Kern Trading & Oil Company. (f) Represents, principally, interest on construction advances which have not been repaid. (g) Represents notes issued in connection with the purchase of Liberty Loan Bonds, paid off during the year.

To replace equipment vacated and to provide for increased requirements your company has placed orders with outside concerns for 42 locomotives, 50 passenger-train cars, 750 freight-train cars, and 130 electric cars; and is building at company shops 30 locomotives and 4,065 freight-train cars. Orders have been placed, also, for three ocean-going freight steamers (El Estero, El Isleo, and El Lago) of 7,825 tons displacement, each, and one ocean-going tank steamer (Tamihua) of 22,900 tons displacement. The cost of this new rolling stock and floating equipment will be approximately $29,700,000, all of which, except the cost of the steamers, it is proposed to provide by means of an equipment trust.

THE SUIT INVOLVING THE RIGHT OF THE SOUTHERN PACIFIC COMPANY TO OWN THE STOCK OF THE CENTRAL PACIFIC RAILWAY COMPANY.

On March 9, 1917, the United States District Court at Salt Lake City, composed of three Circuit Judges, decided this suit in favour of the Southern Pacific Company. From this decision the Government took an appeal to the Supreme Court of the United States. Before the appeal could be fixed for hearing the railroads were taken over by the United States under the Federal Control Act of March 21, 1918. Thereupon the Attorney General applied for and obtained orders of continuance for the purpose of postponing hearing upon the appeal during the period of Federal control. Such control having now ended by the return of the railroads to their owners, it is expected that the appeal will be pressed for hearing. Hence the probabilities are that the case will be argued and submitted early in the October term, 1920.

CONTROVERSY ARISING OUT OF THE OREGON AND CALIFORNIA RAILROAD'S LAND GRANT.

This is an accounting suit brought in 1917 by the United States seeking to off-set against the compensation of $2.50 per acre, due the Company for the unsold lands, moneys received by the Company, in excess of $2.50 per acre, by reason of past sales, leases and otherwise, as well as taxes levied since the forfeiture decision in 1913 and voluntarily paid by the Federal Government to the State of Oregon. The preparation for the trial of this case has involved an extensive examination and comparison of the records of the Company and of the Federal Land Department, local and at Washington. This preparatory work is now about completed and it is believed that the case will be heard in the United States District Court of Oregon some time during 1920.

THE SUITS INVOLVING TITLE TO THE OIL LANDS.

These suits may be divided into two classes—one involving lands alleged by the Government to be valuable oil lands, but not proven or regarded as such by the Southern Pacific Company; and the other involving the Company's productive and valuable oil lands. Both classes of suits have now been disposed of by final judgments of Court, the Government winning the suit for the non-productive oil lands and the Company winning the suits covering its productive and valuable oil lands.

The suit involving non-productive oil lands was known as the Elk Hills Case. It was brought to cancel a patent for 6,109.17 acres which was issued to the Company by the Government in December, 1904, long subsequent to the patents involved in the other suits described in the paragraph below. This case was decided in favor of the Company by the United States Circuit Court of Appeals, but, on November 17, 1919, the Supreme Court of the United States, reversing the Circuit Court of Appeals, directed the entry of a final decree in favor of the United States.

The suits involving our productive and valuable oil lands, six in number and embracing 161,000 acres, were decided in favour of the Company by Judge Bledsoe of the United States District Court for the Southern District of California. The date of this decision and the decree in accordance therewith was August 28, 1919. The law applicable to such cases gave the Government six months within which to appeal. The result of failure to appeal within the time limit is to make the decree final and conclusive. The review of the evidence in the opinion of Judge Bledsoe clearly showed the absence of any fraud or bad faith in connection with the patents to the lands in question. The decision of the Supreme Court in the Elk Hills Case showed that without clear proof of fraud or bad faith the Government could not win the case. The Attorney General, accordingly, on December 5, 1919, publicly announced that the United States would take no appeal from Judge Bledsoe's decision. Six months have elapsed from the date of the decision and, no appeal having been taken, the decrees in favour of the Company in the six cases are now final and conclusive.

TERMINATION OF FEDERAL CONTROL

The Federal Control Act of March 21, 1918, under the terms of which your Company's railroads and steamship lines have been operated by the Federal Government since December 28, 1917, provides, in Section 16, "that this Act is expressly declared to be emergency legislation enacted to meet conditions growing out of war * * * *"; and in Section 14, that "the President may relinquish all railroads and systems of transportation under Federal control at any time he shall deem such action needful or desirable." In accordance with these provisions the President of the United States, on December 24, 1919, issued a proclamation relinquishing control of all railroads and steamship lines at 12.01 A.M., March 1, 1920. The terms and conditions under which the properties are returned to their owners are set forth in the Act of Congress, approved February 28, 1920, known as the "Transportation Act, 1920."

Under the terms of the Transportation Act each railroad company is given the option of accepting or refusing a guaranty by the Government to the effect that the Company's railway operating income for the six months' period beginning March 1, 1920, as a whole, in the case of railroads with which a contract has been made fixing the amount of annual compensation under the Federal Control Act, shall be not less than one-half of its annual compensation as fixed in such contract including additional compensation for use of additions and betterments, with the proviso that, in event of the acceptance of such guaranty, if the railway operating income for such guaranty period shall exceed the amount of the guaranty, the Company shall pay such excess to the Government. Your Company accepted this guaranty for itself and all its system lines.

The Transportation Act provides that all transportation rates in effect on February 29, 1920, shall continue in effect until changed by Federal or State authority, and that prior to September 1, 1920 (the end of the guaranty period) no such rate shall be reduced except upon authority of the Interstate Commerce Commission. The Commission is directed to establish rates which will be adequate to provide the railroads as a whole (or as a whole in each of such rate

SOUTHERN PACIFIC COMPANY AND PROPRIETARY COMPANIES' COMBINED—*continued.*

groups or territories as the Commission may designate) with a fair return upon the value, as fixed by the Commission, of the railroad property held for and used in transportation service: Provided that during the two years beginning March 1, 1920, the Commission shall take as such fair return a sum equal to 5½ per cent. of such value, but may add thereto a sum equal to one-half of one per cent. of such value to provide for a return upon expenditures for additions and betterments chargeable to capital account. If, however, any railroad, or system of railroads under common control, shall receive for any year a net railway operating income in excess of 6 per cent. of the value of its transportation property one-half of such excess must be placed in a reserve fund to be established by the railroad, and the remaining one-half paid over to the Interstate Commerce Commission to establish a railroad contingent fund. This fund to be used by the Commission either (1) in making loans to railroads to meet expenditures chargeable to capital account or to refund maturing securities originally issued for capital account, or (2) in purchasing transportation equipment and facilities to be leased to the railroads. If for any year the net railway operating income is less than 6 per cent. of the value of the transportation property the reserve fund maintained by the railroad may be drawn upon by it to the extent of such deficit, for the purpose of paying dividends on stock, interest on bonds and other securities, and rent for leased roads, but for no other purpose. This reserve fund is required to be accumulated until it reaches a maximum sum equal to 5 per cent. of the value of the transportation property; and thereafter the portion of its excess income retained by the railroad which is not required to maintain the reserve fund at such maximum sum may be used for any lawful purpose.

In connection with the provisions of the Act limiting the return which a railroad may earn on the value of its transportation property, attention is called to the statement given below showing the per cent. earned by Southern Pacific System on the book value of its transportation property during the years 1909 to 1919, both inclusive, after deducting from Net Railway Operating Income the amounts paid for Miscellaneous Rents and Leased Road Rents:

Year ended June 30,				1909	..	..	..	..	..	..	5.11	per cent.
,,	,,	,,	,,	1910	..	..	..	..	..	..	5.65	,, ,,
,,	,,	,,	,,	1911	..	..	..	..	..	..	4.94	,, ,,
,,	,,	,,	,,	1912	..	..	..	..	..	..	4.29	,, ,,
,,	,,	,,	,,	1913	..	..	..	..	..	..	4.60	,, ,,
,,	,,	,,	,,	1914	..	..	..	..	..	..	3.92	,, ,,

,,	,,	,,	,,	1917	..	..	..	..	..	..	6.24	,, ,,
,,	,,	,,	,,	1918	..	..	..	..	..	..	4.60	,, ,,
,,	,,	,,	,,	1919	..	..	..	..	..	..	4.48	,, ,,

As stated in last year's report, the officers having immediate supervision of the maintenance and operation of your Company's lines at the time such lines were taken over by the Government, continued, as a rule, as Federal appointees, to supervise the maintenance and operation of your properties under Federal control. Substantially all such officers were elected to their former positions effective with the termination of Federal control.

GENERAL

Dividends on the capital stock of your Company were declared during the year, payable as follows:

1½ per cent. paid April 1, 1919	$4,146,646.53
1½ per cent. paid July 1, 1919	4,281,716.70
1½ per cent. paid October 1, 1919	4,521,853.55
1½ per cent. payable January 2, 1920	4,527,908 34
	$17,478,125.12

There has been no material change in the conditions along the line of the Southern Pacific Railroad of Mexico from those reported last year. The average miles of road operated during the year was 1,003 miles, but only such maintenance work was done as was necessary to make possible the operation of trains over those portions of the line open for traffic. The company, during the year, has been unable to make any collection on account of its claims against the Mexican Government. A revised estimate places the cost of property destroyed from the beginning of the Madero Revolution, in 1910, to December 31, 1919, at 4,898,700 pesos, equivalent to $2,449,350; and the amount due the company for freight and passenger service performed, for rental of road and equipment, and for material furnished to or confiscated by the vorious military authorities, at 8,947,000 pesos.

In addition to the completed lines of railway reported under Properties and Mileage, and the still incompleted line of the Southern Pacific Railroad Company of Mexico, construction is progressing on the lines of the following companies, viz.:

	Length of Projected Line.	Track Completed.	Grading Completed.	Grading Progressing.
	Miles.	Miles.	Miles.	Miles.
Southern Pacific Railroad:				
Kern Junction to Silvert, Cal.	11.60	† 3.13	8.47	
Southern Pacific Company:				
Sutter Basin Branch—Near Knight's Landing to Tisdale Bypass, Cal.*	19.24	16.49	2.75	
Houston & Texas Central Railroad:				
Dallas, Texas—Belt Line around city	15.54	5.96	—	9.58

*Line will not be opened to public for traffic until ballasting is completed.
†2.58 miles opened to public for traffic August 9, 1919.

With the completion of the 12 miles of the San Diego and Arizona Railway in Carriso Gorge, and the placing in operation, on December 1, 1919, of the last section of the line between Campo and El Centro, Cal., the entire line between San Diego and El Centro was opened to the public for traffic. This line, which is owned jointly by your Company and Messrs. John D. and A. B. Spreckles, will enable your Company to serve San Diego with the shortest line from the middle West.

To provide for the purchase of 4,000 new refrigerator cars, for new icing stations and for the payment of its existing indebtedness to the parent companies, the Pacific Fruit Express Company, which is owned jointly by your Company and the Union Pacific Railroad Company, and which furnishes refrigerator cars to, and operates icing stations for, the Southern Pacific and Union Pacific Systems, has issued and sold $25,000,000, par value, seven per cent. equipment trust certificates dated June 1, 1920, and maturing, serially, on June 1st in each year from 1925 to 1935, both inclusive. All such certificates have been guaranteed jointly and severally by the Southern Pacific Company and the Union Pacific Railroad Company.

The status of the accounts of your Company and its Proprietary Companies with the United States Government in connection with the control and operation of your properties, is shown in the balance sheet. The net balance of $33,631,244.01 due from the Government as shown by these accounts, is made up as follows:

Net amount due from Government account of standard return, cash and agents' and conductors' balances taken over January 1, 1918, and corporate assets collected, after deducting advances for additions and betterments and corporate liabilities paid, subject to current settlement	$235,287.96
Depreciation and other reserves and road and equipment retirements, not subject to current settlement	9,927,424.39
Material and supplies taken over January 1, 1918, for which material and supplies equal in quantity, quality, and relative usefulness are to be returned at end of Federal control	23,468.531.66
Total	$33,631,244.01

For the reasons stated in the second paragraph under "Income Account" these accounts do not include any interest due from or to the Government, or the additional compensation due from the Government for use of additions and betterments.

In the annual report for 1917, attention was called to the fact that the physical condition of your Company's property at the time it was taken over by the Government, on January 1, 1918, had reached a higher standard than was ever before attained. As an inspection indicates that the Federal Railroad Administration has not maintained your property, especially the lines in Louisiana and Texas, at this high standard, a special investigation of undermaintenance during Federal control is now being made. Whilst definite figures are not yet available some idea of the extent to which the lines in Louisiana and Texas have been undermaintained during Federal control may be obtained from the following comparison of the average quantities of rail and ties per year used in the repairs and renewals on such lines during the two years ended December 31, 1919, with similar averages for the test period, viz.:

		Average per year for the two years ended Dec. 31, 1919	Average per year for the Test period	+ Increase — Decrease	Per Cent.
New rail ...	..(Tons)	21,033	23,527	— 2,494	10.60
Ties	.. ..	1,182,419	1,565,183	— 382,764	24.45

By order of the Board of Directors,
JULIUS KRUTTSCHNITT,
Chairman of the Executive Committee.

THE MONEY MARKET.

AFTER being in fair demand in the early part of the week, money became rather more plentiful, apparently because Treasury bills were allowed to run off, with the result that, as shown in the Bank return, the Bank of England increased its holding of Government securities and so provided fresh credit. The discount market was quiet, and the scarcity of commercial bills depressed rates slightly, in spite of an adverse movement in the New York exchange, which revived in same quarters fears of dearer money. A good impression was made by Mr Chamberlain's statement, at the Mansion House dinner on Thursday, that we have "passed the peak of our national difficulties," and that large reductions may be expected in next year's estimates. He also told the audi-

ence that since the beginning of the year, if account is taken of the gold transferred from the other banks to the Bank of England, the volume of legal tender currency had begun to decrease. As will be seen below, the system of putting in gold and taking out Treasury notes has again had the effect of causing considerable expansion in the latter :—

	July 16, 1920.	July 9, 1920.	July 2, 1920.	Previous Rate and Date Changed.
	%	%	%	%
Bank Rate	7	7	7	6 (Apl. 15, '20)

Discount Houses { Call	5	5	5	4 (Apl. 15, '20)
Discount Houses { Notice	5¼	5¼	5¼	4¼ (Apl. 15, '20)
Treasury Bills, 3 months	6½	6½	6½	5½ (Apl. 15, '20)
Market rate (3 months' bills)	6 9/16	6 5/8	6 5/8	..

* * * *

The Bank return showed increases of £2,142,000 in the stock of gold, £1,494,000 in the note circulation (all of which, and £700,000 more, had gone to the Bradbury reserve), and £648,000 in the Reserve. Government securities rose by 7 millions, but Other fell by 5¼, and the Other deposits were thus 2½ millions higher, with a small decrease in Public. The Currency Notes circulation again expanded by £2,155,000 to £362,276,800. A further £2,200,000 was added to the Bank Note reserve, so that the fiduciary issue is slightly lower at £315,476,800, or £5,123,200 below the maximum.

* * * *

The following table shows Public Income and Expenditure for the ten days ended July 10, 1920 :—

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	29·573	Supply Services	16·957
Less— Mln. £		Interest on Debt	7·161
Reduction of debt 4·687		Sundry payments	340
Added to Exchequer balances ·428			
	5·115		
	24·458		24·458

These operations reduced the debt by a sum of £4, 687,211, and caused the following changes, which are reflected in our table of National Debt given in another column :—

	Mln. £		Mln. £
Treasury Bills	+ 28·402	Bank of England advances	— 30·250
Treasury Bonds	+ ·640	Advances by Public Departments	— 1·450
Sundries	+ ·591	Other Debt	— ·619
		Surrenders of Bonds, &c.	— 1·451
		Depreciation	— ·500
		National Savings Certificates	— ·50
	+ 29·633		— 34·320

Floating Debt has been reduced by just over three millions. Property and Income-tax contributed just over nine millions to Revenue.

* * * *

There has been some uneasiness about the weakness in American exchange this week. The rate opened on Monday at $3.95¼, and the movement since has been continuously downward. There have not been wanting those who connect the fall in the value of the pound sterling in New York with the arrangements, or rather lack of information on the arrangements, made by the French Government to provide exchange for its portion of the maturing Anglo-French Loan in the States. As is well known, the British Government has been steadily at work for some months past in laying down funds in America for the purpose indicated, but little or nothing has been heard about the method France intends to adopt to provide the funds necessary for her portion. In the circumstances this may have had some influence on the rate for sterling this week, but probably not so much as the seasonal demand for dollars, which always takes place about this time of the year and continues right on into the autumn. The present quotations for sterling, New York on London, is $3.89¾. Amsterdam rates have followed more or less the trend of American exchange, and from 11 fl 18c, the quotation for sterling sight bills has fallen to 11 fl 10c. Other Continental exchanges have been moving very irregularly, and, except for the demand for currencies for holiday tourists, there has not been much business. French exchange opened on Monday at 46f 20c, and after the usual spasmodic fluctuations the value of francs is now about the same level, as Paris is quoting for London cheques 46f 21c—24c. The quotation for our currency in Sweden has been weak for some days, and at 17k 58 is about half a krone below parity. Sweden just now is a highly productive country, her nationals are specially encouraged to save, the export trade is very satisfactory, and imports have been kept down. Norway, on the other hand, has considerable amounts to pay us on account of ship-building contracts, and this causes a demand for sterling bills; the quotation is equal to about 23k 15 for £1. German marks are not much wanted at 153 for £1. Among the South American group, the Buenos Aires rate for telegraphic transfers has moved against London on a demand for bills to pay for produce —the mean quotation is 57½d. The Eastern exchanges are also firmer on the higher price for silver; Shanghai taels are up to 5s 2d, and Hong Kong dollars to 3s 8d. Rupees are steady at 1s 10d.

EVENTS OF THE WEEK.

JULY 10TH.—Death of Lord Fisher.

JULY 11TH.—Death of Empress Eugénie.

JULY 12TH.—Excess profits duty to remain. Report of Committee on Workmen's Compensation published.

JULY 13TH.—Spa Conference suspended and military advisers summoned. Trades Union Congress demands withdrawal of British troops from Ireland. Corporation tax passed.

JULY 14TH.—White Paper on External Debt published. Conditions for Armistice between Poland and Russia announced in Parliament. Railway companies state case for goods rates increase.

JULY 15TH.—Special freight rates for Government cargoes cancelled. Railway fares to be raised after August 5th. Mr Chamberlain optimistic at City dinner. Germans agree to deliver two million tons of coal per month. Debate on Ministry of Health vote.

THE NEED FOR LIGHT.

To do the Treasury justice, it has worked hard lately to give the public facts. Not long ago it gave us a most instructive comparison of present and pre-war expenditure, with particulars as to the staffs of Government offices, and now it has produced a statement of our external debt. The mere use of the phrase is in itself an outburst of candour, since hitherto official publications have characteristically veiled the existence of an external debt by calling it, with the exception of the Anglo-French loan from America, "other" debt. The total of "external" debt given for last March, 1,279 millions, agrees within a million with the total of "other" debt, plus Anglo-French loan, given in the weekly and other returns, so that apparently external and "other" debt do really, as has always been supposed, mean the same. But even on this occasion the lay mind is puzzled by an apparent inconsistency; for the external debt in the new White Paper (144 cd.) is shown as 1,365 millions on March 31, 1919, whereas on that date, according to the Finance accounts for 1918-19, other debt, plus the American loan, was given as 1,292 millions, and so has appeared in our weekly table. The discrepancy probably arises from the fact that in the case of some loans collateral has been given; but a difference of this magnitude might have been explained to those who are groping for light in dark places.

At the end of March last, however, our total external debt was 1,279 millions, showing, since the same day of 1919, the very satisfactory net reduction of 86 millions. Moreover, 113½ millions of it are owed to Allies, and can be set off against their debts to us. Further, including our share of the Anglo-French loan (51 millions), considerable sums are shown in the White paper to have been repaid, or arranged for, since March 31st last, though it is not definitely stated that some of these repayments have not been effected by means of fresh external borrowing. The chief item in this great total that we owe abroad is a debt to the American Government of $4,000 millions odd, converted at par into sterling at £841 millions, though at the current exchange it would need over £1,000 millions to meet it. This debt is payable on demand—a somewhat formidable pistol if our American cousins chose to cock it and hold it to our heads. It is true that they have consented to forgo the interest for three years, but the principal is still officially stated to be payable on demand. It surely is high time that all this question of foreign debts and credits should be put on to a businesslike basis, that we should write off the debts of our Allies, as we ought to have done as soon as the war was over, and ask the American Government to fund our debt to them into a 40-year bond, with an option of earlier redemption. But our rulers are too busy at Spa, trying to enforce the terms of a bad and unbusinesslike peace. If the Allies would name the sum that Germany must pay, take payment in bonds, and leave Germany to pay the interest and sinking fund in sterling, francs, &c., to be provided by the sale of any commodities that she can sell, then Germany and her creditors would know where they stood, and the Allies, if their demands were not too exorbitant, would hold securities which they could gradually market. This scheme would not, of course, suit the views of those who wish to keep Germany permanently impoverished, but that ambition is quite incompatible with any payment for reparation. It is something that there is a chance of peace with Russia. But we want it at Spa.

Light and leading, and an endeavour to secure real peace, of contentment, and a return to economic sanity, are surely enough needed both abroad and at home. The Budget is going through Committee with difficulty, and with the Chancellor, rightly thinking that he must have revenue, stoutly fighting against opponents who, perhaps equally rightly, think that we are taxed to an extent that eats into our power to save, and so to provide industry with capital. If they are right they should have refused to pass the expenditure. That granted, the Chancellor's logic is as invincible as his courage. A new and influentially signed manifesto against wasteful expenditure has appeared, and is welcome, for we cannot have too many such expressions of the need for sanity in spending. But the public has to learn that it must do its share, and not cry out against economies that may seem to hit its pocket. When the Government proposes to economise on the railway deficit by making travellers pay the cost of transport, an illogical public proceeds to seethe with indignation. Certainly it is high time that we had more light on many things, and we commend to the earnest attention of those concerned the plea put forward in our correspondence columns by Mr Synnott, a member of the late Royal Commission on Income-tax, for a scientific inquiry to co-ordinate, reconcile, and expand, through a National Fiscal Inquiry, the information provided by many overlapping committees.

COMPENSATION AT COST PRICE.

OF late years the insurance offices have done well out of workmen's compensation business. As wages have gone up the premiums based upon the annual wages bill have also gone up, and the benefits payable—though some of them have advanced in proportion to wages—have not, as a whole, kept pace with the premiums. The result has been a good time, which could not be expected to last. Now we have, as the result of an inquiry by a Departmental Committee of the Home Office, not only a suggested revision of the benefits payable to workmen or their dependents, but an agreement with the Accident Offices' Association—representing the tariff companies—which is of remarkable interest. Not since the collaboration between Lloyd's, the marine insurance companies, and the Board of Trade at various stages in the war, has there been so interesting a *rapprochement* between a Government committee and a group of insurance offices.

Subject to certain rather large exceptions, the committee propose that insurance against the liabilities of employers for workmen's compensation should be made compulsory, and that the offices should provide the insurance at cost price. For that is what the whole proposed system of triennial revision of premiums under the eye of a "commissioner," and the limitation of ex-

penses, commissions, and "profits, if any," to 30 per cent. of the premiums, really in practice amounts to. The State cannot make insurance compulsory unless it provides, or supervises, the insurance facilities. The Home Office Committee, seeing the machinery of insurance already to hand, and realising that insurance is about the most tricky and technical business on earth, had the good sense not to recommend the establishment of a State Insurance Department. Such a department would either conduct business at a loss and be a burden upon the taxpayers, or be so expensive and inelastic that the insurance companies operating freely and uncontrolled would cut it out by offering a better service at lower rates—as has happened in some States in America. So, instead of suggesting a costly and inefficient State Insurance Department, the Committee has very adroitly roped in the offices to supply the insurance protection on terms which, at first sight, made us rub our eyes. For if employers do not, when this scheme is given legislative sanction, get their insurance at cost price, the fault will lie with the administrators of the scheme and not with the scheme itself. And yet, so far as we have been able to ascertain, the insurance offices are not dissatisfied. They realise to the full the small future possibilities of a direct trading profit from workmen's compensation business, but the agreement, to which they have set their hands, has squashed State insurance in this country quite flat, and has left to them certain modest advantages which we will endeavour to explain.

The premiums are to be revised every three years, under the supervision of a commissioner, by a committee of which half the members will represent the insurance offices and the other half the assured—the employers and workmen. Premiums will be adjusted so as to make up for any loss in the previous three years, or to return any excess to the assured. Seventy per cent. of the premiums will be provided for claims and for increased liabilities under unexpired risks (on the basis of 45 per cent.), and 30 per cent. will be allowed to the companies for their remuneration. Out of it they must not pay a rate of commission to agents of more than 5 per cent. That really is where the principal economy in the scheme comes in. When agents in the past have had to go after business, and to get it under competition with tariff and non-tariff companies, they have been paid rates of commission ranging from 15 per cent. on small cases to $2\frac{1}{2}$ per cent. on the renewal of big ones. The average cost to an office has been about 11 per cent., so that here we see that a compulsory system of insurance, at officially determined rates, can reduce costs of commissions by fully 6 per cent. of the premiums. The agents may lose at first, but the increased turnover at a flat rate should go some way to compensate them. There is sure to be a considerable increase in premium incomes.

The calculated cost of expenses, commissions, and a margin for profit is reckoned at present at about 45 per cent. of the premiums. We have shown how some 6 per cent. will be saved in commissions. The reduction in competition arising from a compulsory system will permit of economies on the side of establishment expenses. It must also be borne in mind that most of the margin (about 10 per cent.) which we have assigned to profits goes to increase the funds and not to profit and loss account, so that the practical disappearance of this margin would mean a smaller expansion in the funds than under the existing system of free competition. On the other hand, the adequacy of rates of premium would be assured, and provision for rate-cutting would not need to be made. The adequacy of the funds to meet expanding liabilities has been secured by the clause in the agreement which sets aside 45 per cent. of any increase in premiums as an addition to the reserve for unexpired risks. This margin of security will be allowed for in determining the rates of premium. It is true that we do not see, when all the factors are weighed in the balance, much prospect of fatness in workmen's compensation insurance, but the terms of the agreement should permit the companies to pay their way and to provide the minimum reserve necessary for adequate security. In other words, the companies should be able, under the safeguards introduced—especially that one which permits the consideration of allowances for expenses at present unforeseen—to give insurance protection on the terms proposed without running much risk of actual loss. They will carefully select their risks as at present, and set up some sort of pool for the undesired "bad 'uns."

It may be asked why, if they cannot expect to make any trading profits worth talking about, the directors and shareholders should be willing to continue the business. There are very solid reasons. In the first place, dividends are based not on trading profits, but on interest earned by the reserve funds. And, secondly, it is much better to fight "nationalisation" by facts than by pamphlets—by showing that the State can do much better for itself by co-operating with private enterprise than by setting up new and costly Government departments. The existing funds of the companies, and those additions that are made as the business and the liabilities expand, will provide the interest from which dividends may continue to be paid, and the companies, working hand in hand with the State, will be relieved from the disturbing, if not very formidable, bogey of nationalisation. Even if a State Insurance Department were set up, the companies would beat it at its own job; but the companies, as large taxpayers, have no desire to be taxed to meet that department's inevitable deficits. They have offered what is in effect workmen's compensation insurance at cost price, and the country will be well advised to accept the offer as embodied in the report of the Home Office Committee.

INDUSTRIAL PROFITS.

THE reports of industrial companies published during the past 12 months disclose profits considerably in excess of those shown in the previous year, partly, perhaps, as a result of the reduced rate of excess profits duty which was in operation during the period covered by most of the accounts. The statistics given below are obtained by combining the figures published each week in the *Economist* summarising the profit and loss accounts of company reports which appear during that week. This is done at the end of every three months, and in the following table we give the figures for the past four quarters, thus covering a period of 12 months. It should be mentioned that the profits shown are not those earned between July, 1919, and June, 1920, but those disclosed during that period. Railway, mining, insurance, and banking companies (the last named being given fully in special banking numbers) are not included in the statistics. During the past 12 months the reports of 1,406 companies, whose profits for the preceding year were available for comparison, were analysed. The total net profits amounted to £119,208,961, as against £98,507,899 in the previous year, an increase of £20,701,062, or 21 per cent. As may be seen from the table below, the increase in profits has been progressive in each of the past three quarters :—

NET PROFITS (after PAYMENT of DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in Year Ended June 30,		Increase.		Decrease.	
		1919.	1920.				
1919.		£	£	£	%	£	%

Second quarter.....	355	25,974,556	35,778,799	9,804,243	37·8	..	..
	1,406	98,507,899	119,208,961	20,701,062	21·0	..	..

In our article on the same subject a year ago an increase of 5·3 per cent. was shown in net profits, while two years ago the increase was less than 1 per cent. The average profit per company works out at £84,800, as compared with £70,000 in the previous year. It might, perhaps, be surmised from these figures that largely increased profits in the case of a few enormous companies had unduly affected them. But that this is far from being the case may be seen from the next table, which

shows the increase or decrease in profits of 20 groups :—

NET PROFITS (after PAYMENT of DEBENTURE INTEREST, &c.)

	Number of Companies.	Reports Published in Year Ended June 30. 1919.	1920.	Increase. £	Increase. %	Decrease. £	Decrease. %

Only eight of the 20 show an increase in profits less than 21 per cent. Of those which show a decline, two are of the public utility class, while nitrate companies have suffered from the tardy transition from war to peace conditions, and may be expected to show a very different movement 12 months hence. The largest increase is shown by hotel companies, and this follows an expansion of over 40 per cent. a year ago. The iron and steel group shows the smallest percentage among the increases, while that of the trust companies is not much larger.

How profits have been distributed in each of the four quarters is next shown :—

DISTRIBUTION of PROFITS.

	Net Profits.	Ordinary Dividend.		Preference Dividend.		Reserve, &c.	
1919.	£	£	%	£	%	£	%
Third quarter	16,843,142	9,618,718	57·0	2,207,145	13·3	5,017,279	29·7
Fourth quarter	22,660,886	11,135,454	49·1	2,935,890	12·9	8,589,542	38·0
1920.							
First quarter	43,926,134	21,797,686	49·5	6,515,017	14·9	15,613,431	35·6
Second quarter	35,778,799	19.472.761	54·3	3,591,611	10·1	12,714,427	35·6
	119,208,961	62,024,619	52·1	15,249,663	12·8	41,934,679	35·1

The proportions going to the two classes of shareholders and to reserve, &c., are much the same as in previous years, the amount reserved being 0.2 per cent. less than a year ago. The last column includes, in addition to the amounts specifically transferred to reserve and other funds, the sums added to the balance in hand. Many companies transfer large amounts to special and internal reserves before striking profits, so that the retention of an average of 35 per cent. of published profits must be considered fairly satisfactory. How the profits for the 12 months were distributed by the individual groups is shown below :—

	Net Profits.	Ordinary Dividend.		Preference Dividend.		Carried to Reserve, &c.	
	£	£	%	£	%	£	%
Breweries	8,075,737	4,034.064	50·0	1,443.168	17 9	2,598.505	32·1
Canals, Docks, &c.	464,916	175,371	37·3	235,965	50·4	57.580	12·3
Electric Lighting, &c.	1,798,142	725,813	40 5	387,114	21·5	685,215	38 0
Gas	1,727,104	1,459,319	83·2	288,094	16·8	*309	..
Hotels, Restaurants, &c.	1,524,880	523,256	34·3	338,375	22·1	663,249	43·6
Iron, Coal, and Steel	12,336,341	7,071,820	57·2	1,317,065	10 7	3,947,456	32·1
Land, Mortgage, &c.	6,0 9,532	3,522,477	58·6	903,348	15·1	1,583,707	26·3

Nitrate	666,533	659,755	99·0	3.000	0·5	3,778	0·5
Oil	5,496 688	1,914,496	35·2	209,200	3·8	3,352,992	61·0
Rubber, &c.	5,498.335	4,640.683	84·5	144,218	2·6	713,434	12·9
Shipping	6,743,830	3,059,897	45·3	769.935	11·4	2,913 998	43·3
Shops and stores	7 503,967	3,849,221	51·1	885,150	11·8	2,769,596	37·1
Tea	1,9 0,498	1,067,960	53·7	248,200	12·5	674 338	33·8
Telegraph	4,8 0,207	2,284,611	47·4	287,318	6·0	2,238.248	46·6
Textiles	13,493 177	6,866 386	50·8	923,094	6·8	5,703,697	42·4
Tramways	1,461,795	705,628	48·1	427.832	29·2	328,335	22·7
Trust Co's.	3,582,195	2,128,694	59·3	933,480	26·0	520.121	14·7
Waterworks	463,070	349,790	75 2	103.185	22·4	10,095	2·4
Miscellaneous	34,164,559	16,403,086	48·0	5,303,119	15·6	12,458,354	36·4
	119,208.961	62.024,619	52·1	15,249,663	12·8	41,934.679	35·1

* Decrease.

The three groups whose profits declined make a poor showing in the last column, the gas companies actually reducing reserves by a small amount in order to pay dividends. Rubber companies pay out a large proportion of profits in ordinary dividends as the amount of preference capital is relatively very small, while only two of the nitrate companies under review have any preference shares. The oil companies show a high percentage placed to reserve, while the motor and cycle group is not far behind.

The next table shows the proportion borne by net profits and by the amounts reserved to total ordinary and preference capital :—

	Total Ord. and Pref. Capital.	Net Profits.		Carried to Reserve, &c.	
1919.	£	£	%	£	%
Third quarter	135,453,800	16,843,142	12·5	5,017,279	3·7
Fourth quarter	144,291,700	22,660,886	15·6	8,589,542	5·9
1920.					
First quarter	323,107,900	43,926,134	13·6	15,613,431	4·8
Second quarter	213,309,800	35,778,799	16·8	12,714,427	6·0
	816,163,200	119,208,961	14·6	41.934.679	5·1

The return on ordinary and preference capital of 14.6 per cent. compares with 13.7 per cent. a year ago, in spite of the fact of additions to capital from capitalisation of reserve funds. The average ratio of the amounts reserved compares with 4.8 per cent. a year ago. The average rates of interest and dividend paid on debenture, preference, and ordinary capital are given in the tables below, together with the rates shown in our article a year ago :—

	Debenture Capital.	Debenture Interest.	Average Rate.	Avge. Rate a Year Ago.
1919.	£	£	%	%
Third quarter	55,422,200	2,415,676	4·35	4·20
Fourth quarter	53,678,300	2,355,915	4·40	4·15
1920.				
First quarter	84,373,000	3,596,360	4·25	3·82
Second quarter	74,736,900	3,277,386	4·40	4·54
	268,210,400	11,645,337	4·34	4·15

	Preference Capital.	Preference Dividend.	Average Rate.	Average Rate a Year Ago
1919.	£	£	%	%
Third quarter	46,859,600	2,207,145	4·7	5·3
Fourth quarter	47,477,100	2,935,890	6·2	4·8
1920.				
First quarter	128,674,500	6,515,017	5·1	4·9
Second quarter	71,214,000	3,591,611	5·0	5·6
	294,225,243	15,249,663	5·2	5·1

	Ordinary Capital.	Ordinary Dividend.	Average Rate.	Average Rate a Year Ago.
1919.	£	£	%	%
Third quarter	88,594,200	9,618,718	10·8	11·3
Fourth quarter	96,814,600	11,135,454	11·5	12·7
1920.				
First quarter	194,433,400	21,797,686	11·2	9·1
Second quarter	142,095,800	19,472,761	13·7	12·3
	521,938,000	62,024,619	11·9	11·0

Debenture and preference rates show little variation, but the average ordinary rate shows an increase of nearly 1 per cent. as a result of a sharp advance in the last quarter. These figures do not include bonus share distributions nor the benefit of subscription to shares below market price, the value of which to a shareholder it is not possible to compute, in this form.

The final table shows the same rates for each of the groups :—

	Debenture Capital.	Rate of Interest	Pref. Capital.	Rate of Div.	Ordinary Capital.	Rate of Div.	Rate a Year Ago.
	£	%	£	%	£	%	%
Breweries	35,612,829	4·0	23,284,777	6·2	33,236,761	12·0	10·4
Canals, Docks, &c.	2,123,332	3·6	5,654,310	4·0	7,169,971	2·5	2·9
Electric Lighting, &c.	10,751,993	4·6	9,866,686	3·9	12,343,264	5·9	5·5
Gas	9,510,308	3·6	4,447,197	6·5	29,391,458	4·9	3·3
Hotels, Restaurants, &c.	6,121,371	4·4	5,464,383	6·2	4,866,183	10·8	8·1
Iron, Coal, & Steel	15,213,521	4·5	22,124,832	5·9	52,159,775	13·4	12·9
Land, Mortgage, &c.	26,361,560	4·3	18 438,229	4·9	33,261,218	10·6	9·4
Motor and Cycle	1,208,171	6·7	1,528,732	6·4	4,172,205	11·7	17·4
Nitrate	919.500	4·9	65,000	4·6	5,310,750	12·4	12·3
Oil	2,980,600	5·2	3,090,000	6·8	7,357.191	26·3	27·9
Rubber, &c.	2,167,177	5·8	2,647,503	8·0	33,482,285	13 9	10·6
Shipping	19,250,494	4·5	15,290,734	5·0	27.746,244	11·0	13·1
Shops and Stores	5,406,346	5 3	13,857,237	6·4	17,122 556	22·4	12 2
Tea	1,095,100	5·2	4,423,862	5·6	6,991,622	15·3	13·6
Telegraph	4,171,075	4·1	5,621,830	5·1	20.667,182	11·1	9·2
Textiles	11,472,210	4·2	18,131,154	5 1	29,624,435	23·1	19·0
Tramways	39,673,747	4·5	16,765 358	2 6	21,285,054	3·3	3·8
Trust Co.s	37,214.908	4·0	27,651,007	3·4	35,935,308	5·9	5·7
Waterworks	2,190 278	4·3	2,134,460	4·8	5,750,463	6·1	5·3
Miscellaneous	34,745,524	4·7	93,757,946	5·7	152,973,113	12·4	12·0
	268,210,344	4·3	294,225,243	5·2	521,938,038	11·9	11·0

The low rate of preference dividend shown under tramways is due to the passing of the dividend last July by the Anglo-Argentine Tramways Company on a £5,700,000 capital. The oil group, which headed the list in the matter of reserve appropriations, pays the highest average rate on ordinary capital. This, however, is slightly below last year's figure. Shops and stores show a substantial increase in the rate, but there is a considerable decline in the motor and cycle group.

LANCASHIRE COTTON TRADE.

(FROM OUR MANCHESTER CORRESPONDENT.)

THE last three months in the Lancashire cotton industry has been a wretched period for all spinners and manufacturers. Demand has been very poor, and buyers as a body have held aloof. The change of attitude has been largely due to financial and political questions, along with an anticipation of lower rates. Merchants have experienced increasing difficulty in clearing goods bought at high prices some time ago, and there is some ground for believing that values at the beginning of this year got beyond the purchasing power of consumers in foreign markets. The uncertainty with regard to taxation and the unexpected increase in the Excess Profits Duty have undoubtedly resulted in less enterprise on the part of merchants, and many firms have been compelled to limit their turnover owing to the tightness of money and the restriction of credit by the banks. The absence of fresh business has had the effect of bringing about a fall in prices for manufactured goods, but there have been no signs of any definite break in rates.

Since the end of March many fluctuations have occurred in American cotton quotations, but values have not shown any great change. On the other hand, there has been an important drop in Egyptian cotton prices. On April 1st, fully middling American cotton on the spot in Liverpool was at 28.76d. After a slight advance to 29.03d on April 9th, an easier movement showed itself, and 28.15d was registered on the 15th. The lower tendency continued to 27.02d on April 22nd, and the month closed at 27.08d. A rise took place early in May to 28.19d on the 11th, and the higher figures were fairly well maintained; but there was a drop to 26.80d on the 25th. The month closed, however, with the figure at 28.08d. By June 7th the quotation was raised to 29.13d, but by the 18th the price had fallen to 27.89d. Rather lower figures have since prevailed, 26.62d being registered on July 1st and 27.08d on Wednesday last. The American crop for the season 1920-21 started very badly, and the first condition report published at the beginning of June was the worst on record. A distinct improvement, however, has since occurred, and the statement issued at the beginning of this month was much better. The plants are still doing very well, and if there is no setback a fair yield should be experienced. The acreage shows a slight increase compared with 12 months ago. During the last few weeks exports from the United States to this country have been comparatively small, and stocks on this side have been reduced. A big decline has taken place in Egyptian cotton prices. The quotation for fully good fair Sakellaridis on the spot in Liverpool on April 1st was 83.00d, and since then there has been an almost continuous downward movement. On April 30th the figure was 84.50d, and by the end of May the price had dropped to 75.50d. Since then a further depreciation in values has occurred, the figure on Wednesday last being 62.00d. The decided fall has been due to selling by speculators in Alexandria and the absence of demand from the trade, along with very favourable advices relating to the prospects for next season's crop. The area under cultivation is said to be about 15 per cent. larger than a year ago, and there is every likelihood of a substantial increase in production.

During the past quarter cloth manufacturers have sold very sparingly. The turnover has been a long way below the output of the looms, and, compared with the beginning of April, engagements are distinctly lighter. Recently some firms have been compelled to stop part of their machinery for want of orders, and certain sheds have been closed down for an indefinite period. A remarkable change has come over the trade situation since earlier in the year, when the boom was at its height. The offtake for our leading outlet, India, has been very poor indeed. Manchester prices, chiefly owing to the position of exchange, have been quite out of the reach of dealers in Calcutta, Bombay, and Madras. In the circumstances, local shippers have not been in the mood to anticipate the requirements of their customers abroad, and business has been at a very low ebb. The monsoon season has begun, and very favourable reports are being received as to the rains. Stocks of goods in our Dependency are not at all heavy, and a revival of buying cannot be far off. The China market has been very seriously affected by the big drop in the price of silver, and, owing to the change in the situation, there have been numerous requests from Shanghai to Manchester for terms on which contracts might be cancelled. The position has been considered by the Manchester Chamber of Commerce, and exporters have been recommended not to entertain cancellation proposals. Recent cables have been more favourable, and the situation on the other side is understood to be mending. The Near Eastern outlets have given very little support, and it is evident some of our customers in that part of the world have over-bought. Exporters have asked makers to defer deliveries, and advices have been received that clearances were not all that could be desired. A fair amount of demand has been met with from time to time for South America, but operations have not been extensive. Owing to the absence of fresh orders, prices have given way, but many makers of cloth have repeated quotations, as they have not been adequately tested by buyers. The home trade has been adversely affected by the unseasonable weather, and it is understood that certain wholesale houses have fairly large supplies of summer goods on their hands. Retailers, as a body, have met with a less brisk demand from the public, and there has been some appearance of high prices being resisted.

According to the Board of Trade returns, our shipments of piece goods, compared with last year, show a substantial increase, but exports are still much smaller than in pre-war days. The following table gives the comparative figures :—

	—Six Months Ended June—		
	Yards.		£
1913	3,582,788,800	....	48,756,738
1919	1,477,944,800	....	76,609,913
1920	2,396,798,000 (square yards)	....	153,347,097

So far this year, on last, we are shipping more freely to Bengal, Bombay, China, Egypt, the United States, Dutch East Indies, and Turkey, but the figures are smaller for Denmark, France, Belgium, Foreign West Africa, Switzerland, and the Netherlands.

In view of what has been written above with regard to piece goods, it can be imagined that no activity at all has prevailed in yarn circles. From week to week spinners have met with a very poor offtake, and in some sections order lists have run down rather rapidly. On the whole, producers of American qualities have maintained their position better than spinners of Egyptian sorts. As cloth manufacturers have booked very few orders, there has not been any twist and weft to buy, and owing to the falling tendency in prices, there has been no disposition to purchase to meet future wants. The margin of profit has been narrowed, and supplies upon the market are now more plentiful. There has been a remarkable decline in prices of Egyptian yarns. An ordinary mark in 60's twist can now be purchased at 90d per lb, as compared with 160d per lb last February. At the beginning of this month the state of trade was considered by the Master Spinners' Federation, as some members had suggested organised short time. The matter was discussed, but it was decided that curtailment of production on a definite scale was not necessary. Unless there is an early improvement, however, some restriction of output is inevitable, and in some quarters the Federation is being urged to take action before things become worse. Buying of yarn for export purposes has also been at a low ebb. Producers of descriptions suitable for China have had contracts cancelled when deliveries have been late. Only a small trade has been done for India, and comparatively little for European countries.

Our foreign trade in yarn, as will be seen from the table

below, is about equal to last year, but the figures are a long way below 1913 :—

	Six Months Ended June		
	Lbs.		£
1913	106,409,000	....	7,512,062
1919	78,117,000	....	16,319,061
1920	78,614,700	....	23,912,824

In connection with labour matters, the outstanding event during the quarter was the settlement of the wages question at the beginning of May. Mule spinners, ring spinners, and weavers secured an advance of 70 per cent. on list rates. Certain operatives in the card and blowing rooms obtained a special concession of 10 per cent. advance on the wages realised after the addition of the 70 per cent. on list rates. Certain of the higher-paid workers in the weaving department only secured a rise of 55 per cent. on list rates. Speaking generally, it may be said that the operatives are now being paid about three times as much money as in July, 1914. Some allowance must be made, however, for the loss of earnings as a result of the reduction in working hours 12 months ago.

On the Manchester Royal Exchange, during the last few days, a much more cheerful tone has prevailed, and it is believed that spinners and manufacturers are within easy reach of an increased turnover. The leading consuming markets of cotton goods throughout the world are not over supplied, and owing to there having been practically no buying for three months, it is reasonable to expect a revival of demand at an early date. Recently the trade position in India has been steadily improving, and merchants in China are now getting over their difficulties, whilst there is every probability of an expansion of business in Europe and the Near East should trade negotiations with Russia be resumed. A better feeling is now prevailing on the Stock Exchange in textile shares, and rather more demand is being experienced in the local cotton mill share markets. If another buying movement in yarn and cloth takes place, it will not be very long before spinners and manufacturers are able to harden prices and be in a position to recover any ground lost during the depression of the last few months.

NEW DEVELOPMENTS IN RUBBER.

The council of the Rubber Growers' Association state that they "desire to recommend every rubber-growing company and proprietor seriously to consider the advisability of meeting the present labour shortage by reducing bark consumption—adopting either alternate daily tapping without increasing the length of cut, or resting entirely those areas on which bark reserves are seriously impoverished." Tapping systems which a few years ago were considered to be conservative, have proved to be too severe a drain on the recuperative power of the trees. The Brown Bast disease still defies the efforts of scientists to find a preventive and cure, and in some quarters it is held that trees tapped every other day are less liable to its ravages than those trees tapped daily. It is known, of course, that rubber estate managers have been faced for some little while past with inadequate supplies of labour, except in Ceylon. As illuminating this point, the report of the Port Dickson Company, just out, may be quoted, the directors saying that the management has been handicapped by shortage of labour, and that "the general outlook in this respect continues to be unfavourable." The Rubber Growers' Association points out that food supplies are short, and, notwithstanding the poor results obtainable, the various Governments are insisting upon estates planting food-stuffs, thus further depleting the labour force required for upkeep. The natural corollary is seen of wages being forced up. As the tappable bark of the trees represents the main asset of the industry, it follows that if bark is consumed at a greater pace than that at which nature is able fully to renew it, estates are encroaching on capital. Bark conditions are stated to be better in Ceylon than in other countries, and in Ceylon the trees are tapped on alternate days on the majority of estates. In changing over from a system of daily tapping to that of alternate daily, the cost of production per lb would probably increase during the earlier stages, but the association deems it safe to assume that a higher price will be obtained if a smaller crop is to be marketed. These are the main heads of the argument put forward by the Rubber Growers' Association, and several companies have expressed prompt willingness to adopt the recommendation. Seeing that the hoped-for relief from 60 per cent. E.P.D. is not to be accorded in the current financial year, shareholders in plantation companies will watch with the keener interest any plan likely to raise the price of the raw product. Rubber is amongst the very few things that stand lower to-day than was the case before the war, and the short reason is that the supply of the produce has more than kept pace with the demand, Germany having been ruled out as a customer for nearly six years by war conditions. In spite of the extraordinary growth of mechanical traction, using rubber tyres, the Middle East plantations have poured out their latex so lavishly that consumers are able to obtain rubber to-day at a shade below a florin per lb. This price pays handsomely enough to conservatively managed and financed rubber companies, but the advance in costs is a serious factor in the situation, in that it gives little indication of remaining even where it is now. Some of the rubber authorities in Mincing lane have this week expressed the opinion that alternate daily tapping would reduce the output of rubber from 25 per cent. to 40 per cent. if all the producers would consent to undertake such a change. The question to be decided is what effect this would have upon the price of raw rubber. United States buyers take the greatest proportion of the produce. They are comparatively few in number, are closely united, and know their business to a nicety. It is frequently declared that they refrain deliberately from filling their warehouses, and that they will buy from hand-to-mouth when there is any prospect of such policy forcing loosely-knit and sometimes financially weak producers into selling at such prices as the consumers care to pay. If these buyers, who are well acquainted with the probable demand for rubber from car-users and other customers, are threatened with a sudden restriction of, say, 30 per cent. in the output, they may think it worth while to buy freely here and now. This would clear off the large floating stocks of rubber, lead to a rise in price likely to prove permanent, and, at the same time, the rubber estates would be put upon a basis of more healthy, as well as more economical, working. The proposal is certainly interesting, and its adoption by the Rubber Growers' Association makes it deserving of thoughtful consideration. For its success, such a scheme obviously must depend upon the concurrence and the support of a large majority of the Malayan rubber producers.

Railway Statistics.—The fourth number of the valuable Railway Statistics, which relates to the four weeks ended April 25th, collected by the Ministry of Transport, has been published this week. The total tonnage carried in Great Britain, including "free hauled," amounted to 24,985,204 tons, as compared with 28,000,496 tons in the previous four weeks, the reduction being due to the Easter holiday. The receipts per ton mile worked out, however, at 1.576d, as against 1.520d. A detailed analysis of freight traffic covers 90 per cent. of the total tonnage conveyed, the

following being the principal changes as compared with the previous four weeks :—

	Tons.		%
Coal, coke, and patent fuel	—1,931,804	..	12·66
Iron and steel	— 1,597	..	·12
Ironstone and iron ore	+ 132,808	..	10·91
Pig-iron	— 38,810	..	9·23
Machinery.....	+ 4,869	..	10·07
Grain and flour	— 118,588	..	17·23
Stone for roadmaking.....	— 25,314	..	5·39
Bricks.....	— 21,563	..	5·19
Cement	+ 2,448	..	2·14
Timber	— 74,151	..	11·68
Groceries	— 10,847	..	5·56

The speed of the freight trains again shows some improvement, indicating that traffic continues to move more freely.

Empire Cotton Growing.—Some further particulars have been published this week relating to the scheme of the Empire Cotton Growing Committee for increasing the supply of cotton grown within the British Empire. It is proposed that a board of trustees should be appointed to hold the funds available from the Government grant of £50,000 a year, and the proceeds of the voluntary levy of 6d a bale on all cotton imported into the United Kingdom. It is suggested that the Board shall consist of Government officials concerned, the employers' associations, the trade unions in the cotton industry, certain Chambers of Commerce, various institutions, and other bodies. It is the intention to foster research and education, but the matter of most pressing importance, which will absorb most of the money available, is the strengthening of the staffs of the agricultural departments in colonies and protectorates where cotton is a possible crop by adding to the staffs trained men who will give their whole or their main attention to cotton. The primary work of the new organisation will be to develop the growing of cotton by natives and settlers in the colonies and protectorates for their own profit. Everything will be done to facilitate the growing of cotton by British capitalists in such places as may be suitable for this form of progress. It is proposed to appoint without delay a general director and a permanent secretary.

Six Months' Iron and Steel Output. — The National Federation of Iron and Steel Manufacturers has published the figures of the production of pig-iron and steel in the United Kingdom for June, which show a slight reduction as compared with May last, but are substantially higher than in June of last year. The figures are as follows :—

	Pig-iron.		Steel Ingots and Castings.	
	1919.	1920.	1919.	1920.
	Tons.	Tons.	Tons.	Tons.
June	658,000	726,000	631,000	845,000
May.....	671,000	*739,000	755,000	*846,000
First half-year	3,954,000	4,145,000	4,254,000	4,877,000

* Highest monthly total since the Armistice.

The pig-iron output, though 13,000 tons less than in May, represents a better daily average, and consisted of 266,000 tons of hematite, 260,000 tons of basic, 118,000 tons of foundry quality, and 50,000 tons of forge.

Reparation Claims on Germany.—Two months have elapsed since the despatch of the first set of Clearing Office claims in respect of debts due from Germans to British subjects, but the Reparation Office is waiting to issue the forms for filing such claims until they are approved by the President of the Anglo-German arbitral tribunal, to be established under Article 304 of the Peace Treaty, and no appointment has yet been made to the post. Under these circumstances, the Imperial Continental Gas Association is doing good service to its shareholders and to other claimants by drawing the attention of Parliament to the delay, and suggesting a means of immediate payment of a portion of the claims. Its own claim amounts to some £11,000,000; it is very complicated, and the settlement will probably be lengthy; but as to part of it there can be no dispute. The association's works in Berlin and Hanover were seized and sold during the war by the German Government, and there can be no question that the company is entitled to the price paid for them, and Article 296 of the treaty provides that debts due under it shall be paid at the pre-war rate of exchange. The company suggests that the British Government shall now advance them a portion of the price out of the moneys in hand from the liquidation of German businesses in Great Britain, without prejudice to the remainder of their claim. It is stated that advances up to 75 per cent. of the total sum due are accorded by the French, Belgium, and German Governments to such of their nationals as are in a like position; and the delay in payments involves some hardship, for other claimants, while the sums found due are to carry 5 per cent. interest, must be frequently obliged to borrow working capital at 7 per cent. or more. By interviewing Ministers, and through questions in Parliament, the association is doing its best to expedite payment of claims on account. It might be worth while to take an opportunity of calling attention to the matter in debate.

Hudson's Bay Report.—Had it not been for an exceptionally heavy burden of taxation, the results of the Hudson's Bay Company for the year ending May 31, 1920, would have made very good reading. During the year total disbursements for land taxation in Canada amounted to no less than £442,920, against £205,954 in the previous year. The judgment of the Privy Council on the question of the company's liability to pay the surtax levied by the Province of Saskatchewan went against the company, and payment of this liability, and of the Wild Lands tax levied by the Province of Alberta, absorbed £187,902. In view of this large charge, shareholders may well be relieved that the reduction in their dividend was not greater. Recent years' net profits and dividends are set out below :—

Year Ending May 31—	Net Land Receipts. £	Fur and Trading Profits. £	Total Net Profits. £	Ordinary Dividend. £
1909	175,476	80,391	255,867	260,000
1910	240,045	166,156	406,201	400,000
1911	548,512	159,966	708,478	400,000
1912	273,268	196,070	469,338	400,000
1913	589,926	228,324	818,250	500,000
1914	297,302	86,636	383,938	400,000
1915	2,697	30,641	33,338	nil
1916	24,652	266,662	291,314	200,000
1917	140,777	279,708	420,485	300,000
1918	367,841	315,964	683,805	400,000
1919	262,126	406,414	668,540	450,000
1920	174,276	331,757	506,033	350,000

The report states that at the fur sales held in October and January last new high records were established, and, in spite of a break in prices at the April sales, the results of the fur department were satisfactory. Farm land sales for the year ended March 31st last comprise 276,629 acres for £970,878, compared with 285,561 acres for £1,023,072 in the preceding year, the average price per acre being £3 10s 2d, against £3 11s 8d. To meet the decline in the market value of war securities held by the company, £80,000 is set aside, while £195,000 is allocated to the pension fund. A feature of the balance-sheet, which is analysed in the usual column of this issue, is a rise of nearly £1,000,000 in creditors and credit balances.

Information on China.—Mr H. H. Fox, H.M. Commercial Counsellor for China, is at present at the Department of Overseas Trade, 35 Old Queen street, S.W. 1, interviewing firms in London who desire information as to China. It is proposed that a tour shall be undertaken by Mr Fox of certain industrial areas in the United Kingdom during September and October. Provincial firms desirous of meeting Mr Fox should communicate either with the Department of Overseas Trade, or with the secretary of their local Chamber of Commerce.

A Statistician's Register.—The Royal Statistical Society have opened a register of the names of persons eligible for statistical posts. They have from time to time been asked to recommend qualified statisticians, and have taken this means of bringing those who have appointments to offer into touch with suitable applicants. A

list of names and qualifications is now available, and the secretary will be glad to furnish information accordingly.

Transvaal Output in June.—The June statistics of gold output in the Transvaal show that the total production of fine gold during the month amounted to 715,957 ounces, as compared with 699,041 ounces in May and 702,379 ounces in June, 1919. The following table shows the production for a number of years past :—

	1916.	1917.	1918.	1919.	1920.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.

Total	181,573	183,176	193,952	203,110	206,584	207,454	202,412	197,459

Improvement in Ecuador.—A month ago the Government of Ecuador remitted a sum sufficient to meet one half-yearly coupon of the Salt Bonds, on which interest had been in default since January, 1915. This week a second coupon is to be paid, and another remittance is expected shortly, probably covering two more payments, and so extinguishing the arrears to the end of 1916. The Salt Monopoly has always been recognised as an essentially reliable source of revenue, and, were the existing bonds paid off—which, in view of the small amount outstanding, about £636,000, seems quite possible—it would form an excellent security for the loan from American or other financiers which has frequently been discussed of late. There is reason to believe that Señor Tamagno, the President Elect, whose term of office will begin in September, will make fresh efforts to satisfy the claims of the bondholders. Unfortunately he is not coming to Europe, as was reported not long ago, and it is stated that he has even cancelled a projected visit to New York.

EnglishSewing Cotton.—The year ended March 31, 1920, saw a rise of nearly £200,000 in the trading profits of English Sewing Cotton Company, Limited. The report makes no reference to the conditions which enabled this huge additional profit to be made. Recent years' results are compared below :—

	1913-14.	1914-15.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.

Trading profits	376,365	261,528	488,505	468,733	503,854	598,105	794,136
Dep. and deb. int.	65,843	66,268	65,338	64,804	65,396	64,363	64,012
Net profit	310,522	195,260	423,167	403,929	438,458	533,742	730,124
Brought forward	100,079	105,601	120,862	174,029	177,958	191,416	193,563
Amount available	410,601	300,861	544,029	577,958	616,416	725,158	923,687
Preference dividend	50,000	50,000	50,000	50,000	50,000	50,000	50,000
Ordinary dividend	130,000 (13 %)	130,000 (13 %)	180,000 (18 %)	200,000 (20 %)	200,000 (20 %)	250,000 (25 %)	300,000 (15 %)
Reserves, &c.	125,000	..	140,000	150,000	175,000	231,595	415,307
Carried forward	105,601	120,861	174,029	177,958	191,416	193,563	158,603

A year ago the directors decided to double the company's ordinary capital by capitalising £1,000,000 of the reserve funds and issuing one ordinary share, fully paid, for every such share held. On this doubled ordinary capital a dividend of 15 per cent. is paid, or the equivalent of 30 per cent. on the old capital, against 25 per cent. a year ago. Allocations to reserves are over £181,000 higher than in the previous year. The balance-sheet, which is analysed in the usual column of this issue, shows total reserves amounting to about £658,000. Among liabilities the American Thread Account and balance owing to bankers, which a year ago stood at £82,208 and £102,078 respectively, have been wiped out. Creditors are nearly £306,000 higher, while, on the other side of the account, debtors are up by £135,125, stocks by £335,200, and cash by £127,079, investments having declined by £90,715.

A SUMMER School of Civics is to be held at High Wycombe from July 31st to August 14th. The programme of courses and lectures is designed to give the students of the school an all-round knowledge of social life, present-day social problems, and their solutions. Among the lecturers will be Dr Eric Pritchard, Miss Margaret Macmillan, Mr Wilfred Buckley, Miss Norah March and Dr F. H. Hayward. Full particulars may be had from the secretary, Summer School of Civics, Leplay House, 65 Belgrave road, London, S.W. 1.

THE Fight the Famine Council for Economic Reconstruction, 150 Southampton row, W.C. 1, announces that the second International Economic Conference to consider the restoration of Europe convened by it will be held in London on October 11th, 12th, and 13th. A public meeting will be held on the evening of October 13th.

Oversea Correspondence.

FRANCE.—RUHR COAL—BUSINESS AND LUXURY TAXES—WHEAT CONTROL—REVENUE—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, July 13.

AT the time of writing, the Spa conference is not yet over, and it is impossible to say what its outcome will be so far as the two questions that are vital for the economic future of France are concerned—those of coal and reparations, which, indeed, are merely two parts of one whole. It goes without saying that the extraordinarily ill-judged outbreak of Herr Hugo Stinnes, the great German coal baron, last Saturday has had the worst possible effect here, and has gone a very long way towards rendering the French much less inclined to be conciliatory in their claims than they were a week or two ago. Figures published here recently from the pen of M. Victor Cambon reveal the astounding richness of the Ruhr coal beds. He writes :—

"The resources in combustibles which are known to exist in this basin are fabulous. No fewer than 126 superposed coal seams have been recognised, running to a total thickness of 108 metres.

"The quantity of coal situated at less than 1,500 metres from the surface is estimated at 54,000 million tons, and below this depth at over 100,000 million tons.

"Supposing that only the same amount of coal were extracted from the Ruhr basin as in 1913, this would have a value at present prices of over 40,000 million francs per annum."

The statement made by Herr Stinnes to the effect that the destruction of the French northern coalpits by the German army was not wilful, but a matter of military necessity, has added to the exasperation felt here at Germany's delay in fulfilling the coal clauses of the treaty. The net result of this non-fulfilment is that the price of coal in Paris, which was 140f per ton in May, 1919, is now 460f per ton, with the prospect, which I am officially informed is almost a certainty, that there will be no coal available for domestic heating purposes during the coming winter.

Although the Budget has not yet been transformed into law as a whole, the greater part of the new taxes have now come into operation. The most interesting of the new taxes is that of 1.1 per cent. on the total turnover of all business concerns, with the exception of those of stockbrokers and certain other categories of businesses where this tax is represented by previously existing direct taxes, and with the special exceptions of bakers and tobacconists. The tax of 1.1 per cent. is distributed as to the 1 per cent. to the State and the .1 per cent. to the

commune or department. Special registers of transactions have to be kept by all persons liable to pay the new tax, which will be paid over to the revenue authorities by the traders themselves. Goods classed under the heading of luxuries and foodstuffs and beverages consumed in hotels, restaurants, and cafés of the first class are subject to a tax of 10 per cent. on the sale price. In the case of hotels, restaurants, and cafés of the second class this luxury tax on foodstuffs and beverages is reduced to 3 per cent.

The old luxury tax, which was a tax of 10 per cent. imposed on certain categories of articles when the sale price exceeded a certain scheduled figure, has been entirely transformed. Articles classified as objets de luxe are now divided into two distinct classes, namely (1) those which from their very nature are regarded as luxuries, and (2) articles which are of ordinary general use, but which become luxuries when their sale price exceeds a certain scheduled figure. In the case of the first category the tax of 10 per cent. is levied on the whole of the price paid. In the case of the second category an entirely fresh set of schedules has been drawn up, in which the prices at which the purchaser was formerly taxed with the taxe-de-luxe have been substantially raised.

The much disputed question of Government control of the wheat supply has again been before the Chamber, and this body has now approved the responsibility being thrown on the Ministries of Commerce and Industry for supplying the population with bread. The method to be followed by the State will be to purchase, by friendly negotiation as far as possible, wheat from French and foreign cultivators. A special clause makes it illegal for a higher sum to be paid for home-grown wheat than that fixed by decree. The Bill provides for the securing of supplies in the event of persons with stocks refusing to deal, and it forbids the use of flour, wheat, and bread for the feeding of cattle or for the purpose of distillation. So far this is little more than the present regulations provide for, except that the preamble to the Bill is of particular interest because it is supported more on moral than on economic grounds. Such, it states, has been the mania for speculation that without Government intervention there would be reason to fear that home-grown wheat would attain the price of foreign-grown wheat, which not only has to bear the cost of transport, but also enjoys a fictitious value owing to the rate of exchange. It is desirable, the Government argues, that the home producer should not be paid more than the real price paid to the foreign producer. The Special Commission whose duty it is to fix the rates has established them as follows per 100 kilogrammes: wheat 100f, millet 90f, rye 80f, and on this basis the cost of bread will be 1f 25c, or 1f 30c per kilogramme. (The present price is 1f 05c per kilogramme.) This further increase in the price of bread is naturally deplored, but it is the first time since 1915 that the price of bread will really correspond with the price of wheat, and it is another sign of the desire of the Government to return to normal conditions.

The taxation returns for June, 1920, are now available, and show a total of 907,702,800f. This sum constitutes an excess of 277,694,300f over the estimates; in other words, an excess value of 44 per cent. It will be seen from this that the increase in yield over the estimates remains steady, the percentages being 41 January, 37 February, 44 March, 54 April, 44 May. As compared with June of last year, the increase in yield is 269,037,200f, or 42 per cent. Registration dues are a most striking feature of the returns, for these exceed the estimates by 80 per cent., and are 54 per cent. in advance of the yield for June, 1919. Taxes on the sale of securities and real property and stamp duties are also enormously in excess of what had been foreseen, and this result can be taken as an indication of the increased activity in French trade. Customs are only 12 per cent. over the estimates, the increase in this case being generally due to the import of foreign sugar. Tobacco, colonial products, and colonial sugar have resulted in a considerable profit to the State, exceeding the estimates by 30 per cent., the actual returns being 22 per cent. over the results of June, 1919. From the general economic standpoint it is of particular interest to note that as a result in the rise in tariff of posts, telephones, and telegraphs, there has been an increase of 80 per cent. on the receipts obtained in June, 1919.

The French Bourse, as was only to be expected, has reacted this week vigorously to the appreciation of sterling. The fall of sterling to 45f 70c last Monday placed the market in a somewhat parlous condition, but its rise led to a rapid improvement, more particularly as towards the end of the week there was a feeling of confidence that there would be another move forward. Competent experts here prophesy a still further appreciation of the pound, partly because of the speculation that has been going on on the hypothesis that the franc would appreciate, and partly because several persons who had payments to make neglected to cover themselves. It is expected, therefore, that there will be a further rise, particularly in foreign securities. French Rentes generally have been firm. The most marked changes have occurred in Royal Dutch, which is up again to 30,100, Shell, which has again advanced from 463 to 501, and Mexican Eagle from 436 to 475. Banks have been buoyant, Crédit Lyonnais, for instance, standing at 1,649, Banque de Paris at 1,545, and Union Parisien at 1,260 as against 1,210. Shipping has shared in the improvement, Trans-Atlantique advancing from 440 to 454, Messageries from 450 to 462, and Chargeurs Réunis from 1,240 to 1,330.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows :—

DEBTOR.

GERMANY.—PRUSSIAN FINANCES—BOURSE AND EXCHANGE—UNEMPLOYMENT—IRON—CAPITAL MARKET—CROPS.

(FROM OUR CORRESPONDENT.)

BERLIN, July 8.

UNCERTAINTY about the outcome of Spa, with increased optimism during the past two days, has been the attitude of the last week. Instead of Federal finances, the conditions and prospects of which have been set forth in three very detailed memoranda for the Spa negotiators,

Prussian finances this week took the field. Prussia's finances have hitherto been regarded as relatively flourishing, the main factor being the complete extinction of the old Prussian National Debt through the profitable deal by which Prussia, and all the other railway-owning States, last spring transferred their worn-out railway systems, with their increasing deficits, to the Republic. Prussia's Budgets before the war showed regular surpluses—of between 100 and 200 million marks—the first deficit, 114 million marks, being in 1914. Since then, partly owing to increased official salaries, but mainly owing to the State railway deficits, the finances have gone to ruin. This year there is unforeseen expenditure of 200 million marks for support of unemployed, and of 600 million marks on compensation for damage done during disorders. The Budget of the now reduced Prussia nominally balances at 5,600 million marks, against 9,600 million marks last year, the chief revenue item being 2,143 million marks, share of the new Federal income-tax, which Prussia gets in exchange for abandoning her State income-tax. But the recent official salaries reform is to cost Prussia 4,043 million marks, which far exceeds the Estimates sum, and of this 1,531 million marks has not been provided for. The total deficit, counting other expenditure unforeseen when the Estimates were drafted, will be about 2,000 million marks. The Finance Minister told the State Assembly that new sources of revenue will have to be devised, and promised a simplification of the administration, which is badly needed, as the Government, despite the reduced administration area, has increased its officialdom by nearly 4,500 persons. The Funded Debt now amounts to 10,600 million marks, the Floating Debt to 14,600 million marks, but these debts exist only in a technical sense, awaiting the completion of the railway transfer agreement.

The foreign exchanges during the past week kept almost at a dead level, but the Bourse was on the whole very firm, and considerable rises in certain quotations were registered. This, in view of the habitual dependence of the Bourse upon exchange fluctuations, is an anomaly, apparently to be explained by the fact that speculators have tired waiting for an exchange lead, and are again accepting the lead of the normal Bourse influences. On the 2nd there was a sharp rise in mining and metallurgical shares, and to this next day joined a new boom in oil securities, which lasted until to-day. Leaders here were the Deutsche Erdoel and Deutsche Petroleum shares. Potash stocks, notably the Deutsche Kali and Aschersleben, both of which announced a few weeks back very large profits and increased dividends, rose. Less favourable reports are now coming in about potash prospects, and the real source of profit—export—has been largely dried up by the rise in mark exchange. To-day potash stocks receded a little. Earlier in the week the incident at Spa, caused by the non-arrival of Germany's military experts, had a slight depressing effect, but in the last two days Spa has been treated as a bull factor.

The industrial condition is distinctly worse. The governing factors continue to be: unwillingness or inability of the home public to buy, and difficulty of exporting at present mark exchange. From the latter phenomenon it seems that the rise of German prices to foreign levels, the dread of Government financiers for the past year, and against which many formal official declarations have been made, has in the main taken place. In part, it has taken place owing to the native price rise, and in part owing to the appreciation of the mark. The May reports of unemployment, the last to come out, show that the labour market was even then becoming less favourable; the proportion of unemployed in textiles rose, as against April, from 3.6 to 6.2 per cent., and in the metal, building, wood, and general manufacturing branches there were also sharp rises in the rate. At present very serious unemployment reigns; an unemployed demonstration of 80,000 persons took place in Berlin; the boot industry everywhere is still practically at a standstill; 80 per cent. of Saxon textiles workers are reported to be unemployed; and in the Wupperthal (Elberfeld) and other leading textiles districts mills are working mostly only 20-30 hours a week. Even then they are working mostly for stock, as hardly any sales are being done. In the metals and engineering industries things are not so bad, and so far more is heard of lack of orders than of unemployment, but repeated reports, substantiated by figures, show that in many branches Germany, even if her export duties are abolished, cannot compete against England or America. Being obliged to realise, producers of finished metal goods are now cutting prices. A series of announcements of lower prices for small metal goods, such as locks and house fittings, has been made. A reduction in production cost for these industries is difficult as the coal prices remain unchanged. The long-announced fusion of the Gelsenkirchner and Deutsch-Luxemburg mining, metallurgical, and finishing concerns, which have together a capital of 260 million marks, was this week formally decided on. The result is one of the largest concerns in Europe. The former company lost through the Peace Treaty its most important iron works, but it was put in possession of large free capital, which enabled it to buy back 58 million marks of its former stock of 188 million marks. The fused companies present a typical so-called "mixed concern," producing everything from coal and ore to fine machinery. The combine announces that it will as far as possible limit export of its coal and pig-iron, so that the profits of manufacturing may remain in Germany. The important Stumm complex of coal, iron, steel, wire, foundry and smelting concerns, which also realised capital by relinquishing its Saar holdings, is being reconstructed. Stumm now owns or controls ten large companies, one of which in turn controls three smaller concerns; and he, too, produces machines, automobiles, and other finished metal goods.

The stoppage of the price-rise and of industrial activity, and with these the impending enforcement of the new Property Taxes, have begun to affect the capital market. Bankers' reports show a reduction in the money raised for new foundations or for increasing the capitals of existing concerns. A private bank's report estimates the capital raised in May at around 665,000,000 marks, as compared with 1,018,000,000 marks in April. The total fresh capital raised in January-June by existing and new companies of all kinds, together with municipal bonds, was 8,522,631,000 marks, the greatest number of new foundations being insurance companies, mostly engaged in transport insurance. The number of companies which increased their capital was 884, the nominal increase being 3,893,763,000 marks, and the effective increase 4,824,463,000 marks. The number of new foundations was 192, with capital of 752,153,000 marks, and the number of companies issuing bonds 332, to amount of 1,121,410,000 marks. A report on shipbuilding shows that 15 companies raised their capital during the war from 55,480,000 marks to 82,400,000 marks, and that 11 new companies with total capital of 42,250,000 marks were founded. The annual building capacity of all Germany is estimated to have risen from 500,000 tons (before the war) to 700,000, this increase presupposing that the yards are fully occupied, that the supply of material is adequate, and that labour conditions are normal. At present the yards are very short of iron, and a complaint to the Government that they are receiving much less than is sold to foreigners has brought a promise of remedy.

A crops report referring to the beginning of July is slightly more favourable than the preceding reports, all of which foreshadowed a very good harvest. The winter crops kept their earlier good condition, and the condition of winter rye, the least favourable so far, improved. The spring crops kept their condition, but oats have deteriorated. As usual at this time of the year, the bread sold has deteriorated badly in quality. It consists largely of milled legumes, is unpalatable, and, according to experts, injurious to health. The prices of imported food, rice, coffee, condensed milk, lard, and beans, also of eggs, sugar, and potatoes, have been practically stationary for a fortnight. So far, imported foods have fallen to as much as half of their maximum price of the spring; but their prices do not yet fully reflect the recovery in the mark exchange, and the fact that they are now at a standstill indicates that large stocks are on hand and that importing has not been largely done at the more favourable exchange of the past six weeks.

JAPAN.—TRADE BALANCE—FINANCIAL CRISIS—EXPENDITURE AND TAXATION.

(FROM OUR CORRESPONDENT.)

TOKYO, June 4.

THE record of the last five months in Japan's foreign trade shows that there is little hope of the country being able to reverse the adverse trade current that has been in evidence since the conclusion of the war. In January the excess of imports amounted to 26,000,000 yen; in February it rose to 96,000,000 yen; and by March it had reached 135,000,000 yen, falling to 77,000,000 yen in April; and in May rose again to 100,615,000 yen, bringing the five months' excess of imports up to a total of about 417,500,000 yen. Although exports showed some tendency to expand during the period, the increase in imports was far greater. The total value of exports for the five months amounted to only 955,000,000 yen, while imports reached a value of 1,402,500,000 yen.

Exports for the month of May reached a value of 192,218,000 yen, an increase of 36,290,000 over the corresponding month of last year; while imports for the month totalled 293,533,000 yen, a gain of 108,648,000 yen over the same month of last year, resulting in an adverse balance for the month of 100,615,000 yen, against 28,257,000 yen for the same period of 1919. During the month no gold was exported, but imports amounted to 3,489,000 yen, and the total imports of gold for the five months reached 18,305,000 yen, against an export of 1,642,000 yen.

Most of the decreases in exports were in such lines as rice, starch, beer, raw silk, cotton yarns, iron bars and sheets, copper, spelter, leather manufactures, matches, and woollen cloth, while the principal increases were in beans, tea, refined sugar, waste silk, coal, timber, braids, silk tissues, cotton tissues, cotton knit goods, hats, caps, buttons, paper, Portland cement, porcelain, glass and glass ware, as well as toys.

Generally speaking, there is a tendency in Japan's foreign trade for exports to increase over imports toward the latter part of each year, but the present trend of trade appears to be too fixed to warrant Japan expecting much diminution of her adverse balance of trade, while the increasing complexity of the economic situation here is certain to react unfavourably on foreign trade. With many firms closing down and numerous bankruptcies taking place, importers and exporters alike are assuming an attitude of great caution. The inevitable decline in prices may, of course, favour exports more than can now be foreseen, but one cannot be over-sanguine in regard to the situation. As wages are more than twice what they were two years ago, the cost of industrial output cannot be greatly reduced, and exports are not likely to increase much at present prices.

The financial situation in Japan has been extremely critical for the past three months. Owing to abnormal loans on the part of banks, hectic speculation has been running rife. Exchange after exchange has had to close for varying periods; some important banks have had serious runs, and two or three have failed, with great loss to investors as well as depositors. This reckless system of unlimited loans, of course, swelled the national currency to an unprecedented degree of inflation, keeping up prices beyond all record. The Bank of Japan, which has been blamed for encouraging this speculation by not increasing its rate on loans, has been trying to ward off further strain by extending accommodation to firms in straits; but such a remedy cannot prove more than temporarily effective.

Meanwhile the national specie holdings have declined from some 2,000,000,000 yen to 1,871,000,000 yen, of which 915,000,000 yen belongs to the Government, and 956,000,000 to the Bank of Japan, with 684,000,000 yen at home and 1,187,000,000 yen in England and America. At the extraordinary session of the Imperial Diet soon to be convened, the Government proposes to introduce a military and naval budget amounting to over 1,300,000,000 yen, covering a number of years, and this, if passed, will give the military party more power and impose still greater taxation on the people to provide the extra outlay. The intention of the authorities is to increase the income-tax and the imports of such luxuries as alcoholic beverages and so on. The move is very unpopular, as there appears to be no menace to Japan in sight, and the need for so great an armament outlay does not seem pressing. The general opinion is that the military budget should be postponed, at least until a regular session of the Imperial Diet, so that it can receive the mature deliberation it should have. Not only so, but the military expedition to Siberia is costing about 14,000,000 yen a month, and the wherewithal to meet the deficit it must cause is not in sight, so that an issue of public bonds will become necessary.

SWEDEN.—INDUSTRIAL PROFITS.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, July 8.

AN interesting survey regarding the profits made by Swedish industry during the war shows that during the flourishing years, 1916, 1917, and 1918, a total of 867.9 million kr was distributed in dividends alone, and if bonus shares are included, as they should rightly be, one arrives at a total amount of 1,092.9 million kr, inasmuch as bonus shares during the period named amounted to 225 million kr. Calculated in percentage on the share capital the average dividend was 15.4 per cent.—those companies that have yielded no profit or shown a loss are here not included—and if bonus shares are considered 19.4 per cent. Taking into consideration that total profits during the years named amounted to 1,254 million kr it is estimated that on an average 69 per cent., the bonus shares excluded, of the total net proceeds were distributed to shareholders. As far as net profits are concerned 1916 seems to have been the best year, followed by 1917 with a result about 16 per cent. to the worse, and 1918 with 24 per cent., or 120 million kr smaller net profits. On the other hand, dividends did not follow this movement, but rose gradually, although not in comparison to the increase in share capital, as from 1916 to 1918 the total net profits were reduced about 50 per cent., but the dividends only went down 18 per cent. Whereas Swedish concerns in 1916 distributed little more than half of the net profits made, 71 per cent. during 1917 and 84.4 per cent. in 1918 were paid in dividends. To meet taxation and for the necessary reserves a total amount of 387 million kr, or 31.9 per cent. of net profits were set aside, which is generally considered insufficient. With the present depression which has prevailed almost all through 1919 a far inferior result for that year is sure to have arisen. The Swedish trade balance for May showed record figures for such export articles as timber, woodpulp, and matches. On the other hand, the exports of iron and steel, which have been exceedingly dull for a long time, showed a slight improvement. Shipping in the Swedish ports is very active, and the number of vessels arriving is greater than ever.

SWITZERLAND.—MONEY AND CREDIT—AMERICAN LOAN.

(FROM OUR CORRESPONDENT.)

GENEVA, July 8.

THE crisis in Swiss public credit is now officially admitted in a warning circular which the Federal Department of Finances has addressed to the cantonal governments. The Swiss investment market is still suffering from the cheap sale of Swiss securities by foreign, chiefly French, holders, who want to profit from the agio of the Swiss franc in their respective countries, considered by them as only temporary. But the root of the evil is to be found in the absorption of the liquid means of bankers by the floating debt of public bodies. Therefore the Federal Treasury is inviting the governments of the cantons and the boards of the towns to do their best in cutting down all expenses not strictly necessary. Unfortunately, the Federal Government, which issues such advice, has set in many cases the bad example of public waste. Another reason of the increasing shortage in the money market is the locking up of a great portion of the income of Swiss investors in investments in neighbouring countries with depreciated currencies. It is about one-fifth of the total of securities held by Swiss capitalists,

which for several years have yielded no income when converted into Swiss francs. Most of the capitalists leave the income with foreign bankers or use it for buying foreign securities, or more often sell the foreign currency they earn to currency gamblers.

The Swiss Confederation will have to redeem in November of this year 108 million francs of maturing Treasury bills, and further needs at least 150 million francs in order to cover the deficit of 1920. The same sum is required by the Federal Railways, which are to consolidate the floating debts raised in the five war years and to continue electrification. Further, many cantonal governments urgently need money. Some towns have enormous floating debts and maturing loans, for example, Zurich, with 50 millions only in 1920. Unfortunately, the saving power of the agricultural population, which largely accounted for the increase in deposits during the last 18 months, is obviously decreasing owing to the check to the rise of prices of foodstuffs. The time when leading banks in the towns rediscounted bills with rural saving banks seems to be over. The townsfolk, owing to the high prices of all commodities and a systematic suppression of the spirit of saving, scarcely play a rôle as a saving factor. The safest barometer is the movement of deposits with the cantonal banks (the State banks of the 22 cantons), which in the month of March shows, for the first time since many years, a slight reduction of saving deposits as well as of outstanding debentures. It is not surprising, therefore, that the Federal Treasury is to accept the rather hard conditions of 8 per cent. interest and nearly 4 per cent. commission on which the group of American financiers insists for the, about, 30 million dollars loan to Switzerland. And, under these conditions, it is not astonishing to hear that the Swiss share in the international loan granted by the Allies and the Neutrals to the suffering Danube States will be rather modest—namely, only 25 million francs, a sum in no proportion to Swiss pre-war investments in those countries, estimated at about one milliard francs.

Letters to the Editor.

A NATIONAL FISCAL INQUIRY.

TO THE EDITOR OF THE ECONOMIST.

Sir,—Since 1914 there have been a number of separate inquiries by commissions and committees into various financial problems raised by war conditions, most of them novel. Though these problems are interrelated, no attempt has been made to co-ordinate the results of the inquiries, and to supplement them when necessary.

There are at least ten Reports of the Select Committee on National Expenditure, two Reports of the Commission on Currency and Foreign Exchanges, a score or more of the various Committees on Public Accounts, and recently we have had a nine months' inquiry by the Royal Commission on Income-tax, followed by the Select Committee on War Wealth Levy. I am told that there is now another Board of Trade Report on prices and kindred matters.

As illustrating how these subjects overlap, the Select Committee on War Expenditure in 1917 (No. 167) published a detailed and reasoned Report on Treasury Control of Expenditure, on the relation between public expenditure, credits, wages, and prices, and expressed very definite views which are hard to reconcile with parts of the Report on the Currency Commission, and certainly cannot be reconciled with the action of State departments and of State-appointed Tribunals in dealing with the wages of labour.

"The strongest case," the Select Committee reported (p. 7 ibid), "should be required to be established before any advance in wages is conceded on any ground other than the rise in the cost of living," yet in the last few weeks the National Wages Board has further increased railwaymen's wages, although the chief exponent of their case based his demands on grounds other than the cost of living, which he deliberately abandoned, and the award followed the same lines.

The Cabinet has now formally sanctioned these increases in wages, involving a resulting increase of rates and fares of from 20 to 30 per cent. In England the total increase in rates and fares necessary will be from 70 to 80 per cent., in Ireland at least 150 per cent.

The Select Committee (p. 5) stated that, "in the expansion of credit the issue of paper currency.....plays a very subordinate part," and they point out that "notes are issued to meet requests on the banks from their customers, and the increase is a consequence, and not a cause, of the increased purchasing power of the community." But there are writers who still are urging that the amount of currency can be artificially limited, and that an increase of currency is not the effect, but the cause, of increased prices.

How are such differences as these to be reconciled, and a guiding policy both for taxation and expenditure to be framed, except by a supreme National Inquiry by chosen men, who, from either experience or research are familiar with these subjects, both in theory and practice? The conflict of opinion (chiefly between the public who make the profits and the officials who collect them) on the subject of the excess profits duty and the war wealth levy, illustrates the necessity for such an inquiry. These proposals were not brought before, nor considered by, the Royal Commission on Income-tax (of which I was a member), though it is obvious that both affect the income-tax; as, indeed, is admitted in the Inland Revenue Memorandum on the subject of a Levy on War Wealth (pages 6 and 9, No. 594, 1920), which was prepared before the Royal Commission had finished their task. The War Wealth proposal has been rejected, but I doubt whether it is dead, or only sleeping.

It was not possible for the Commission to complete the inquiry into the income-tax (as we were directed) "*in all its aspects*," as is pointed out in the Reservation (No. 1) signed by four members of the Commission. Questions of principle were not touched upon, except in a fragmentary way, because, firstly, our time was limited by Budget considerations, and, secondly, the witnesses called practically did not address, and, indeed, were not prepared to address, themselves to these fundamental matters. Questions such as the correlation of direct with indirect taxation, the effect of taxation on production and trading, on prices, on saving, and the supply or dispersion of capital, on public expenditure, wages, and inflation of currency, were practically untouched.

Neither was there any consideration of the question whether the present high taxable income is not largely due to the distribution and manipulation of war-created credits, and whether this level of income can be maintained. Evidently the Inland Revenue rely on its permanence, otherwise there would be no equity in capitalising it for the purpose of a war levy, but here again bankers and traders entertain a contrary opinion.

There are again some writers who would seem to infer (from an array of figures presented) that the nation has increased in wealth since pre-war days. If this is not implied, it is difficult to see the object of the elaborate calculations of the value of British capital, now, in 1914, and at previous dates expressed in present money values. Is it not a fair question to ask whether such a comparison of values is possible until the standard of value is fixed? And is there an agreed standard? Is it agreed what capital is? What the wealth of a nation is? On what basis the various kinds of income or of annual produce are to be capitalised? The idea, or should I say the fallacy, that money values alone constitute a proper basis for comparison peeps out more than once in the evidence given before the Income-tax Commission, when allusion is made to, and figures produced to show "the great increase of wealth since the war."

Definite conceptions and directions are needed on these and other matters, such as (a) the policy of a high discount rate, and (b) the effect of high death duties on the supply of capital.

If the suggestion of a National Fiscal Inquiry is thought opportune, your columns might perhaps be open for the expression of views as to its composition and scope.—Your obedient servant,

Nicholas J. Synnott.

Furness, Naas, Co. Kildare, July 12th, 1920.

THE GOVERNMENT'S RAILWAY POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The White Paper setting out the Government's policy in regard to the railways of this country has now been issued, and it is possible to gauge the future to some extent. The railways to-day are short of something over £40,000,000 a year to enable them to maintain their pre-war level of profits, and the Government under the guarantee is called upon to make good the deficiency. The total revenue earned in the last financial year was £193,407,963, and the minimum revenue necessary to enable the railway companies to dispense with the guarantee, £234,757,493. A further advance on this of approximately 20 per cent. is necessary to meet the increased costs due to the vicious wages and prices circle, unless reorganisation will enable the railways to effect large economies in operating expenses.

A pre-war level of profits will not, however, meet the case. The average return on the capital invested in the railways was then some 4 per cent. The railway companies will certainly have to pay 6½ to 7 per cent. for any capital they may need in the near future. Unless rates and fares are raised to such a level that a return of at least this can be gained from any fresh capital expenditure, it is certain that the market will not provide the funds needful for urgent works, even if the Railway Boards were wishful to spend money which would reduce the margin available for ordinary dividends. The dividends on the ordinary stocks are for the most part at so low a level that any reduction is not to be contemplated. Any general reduction would be a disaster.

The proposal is that the railways of England and Wales should be formed into six groups—*i.e.*, five trunk line groups and a London group, and the railways of Scotland into a single group. As the Government does not propose to give to the companies any financial guarantee, each of the groups must be self-supporting. It is stated that with due care and economy it should be possible for group companies to improve on their pre-war return. This clearly implies that the grouping will enable the railways to make substantial economies in operating expenses.

In some of the groups there may be some ground for this expression of opinion. It is certainly not true of all the groups. The North-Eastern group is to include the North-Eastern Railway, the Hull and Barnsley Railway, and a few very small railways in that area. The group will no doubt be able to effect some economy at Hull, but the time when any large economies can be made there has long since past. It is many years now since the two companies joined hands to build a joint dock. Economies will also be effected due to the rolling-stock being owned by the few groups instead of by many companies, a saving largely effected during the war, and the saving under this head will be much greater if the private ownership of wagons by traders is prohibited. When all is said, the abolition of the Hull and Barnsley competition and the gain from the grouping of the surrounding companies cannot enable the management to effect economies which will amount to one-half of 1 per cent. on the capital which has been expended on those lines.

The North-Eastern group will be the smallest of the groups. It, however, serves a district of great industrial importance, so that any failure to provide for development would be of great moment. Another example of the same kind is the Western group. This is to comprise the Great Western Railway with the Welsh lines. The latter would include the Cambrian Railway and the Taff Vale, Barry, Rhymney, and other South Wales coal roads. The economies must be mainly made through the amalgamation of the Welsh railways. The total revenue of these does not amount to 25 per cent. of the revenues of the Great Western Railway, so that the economies might be very substantial as compared with the net earnings of the Welsh railways, and yet small when compared with the net revenue of the Western group. It is very doubtful whether they would be relatively any larger than in the case of the North-Eastern group.

Larger savings might be looked for in the cases of the North-Western and some of the other groups. Many of the economies in operation have been effected during the war; many will be dependent on the expenditure of new capital. In any case, few can be realised immediately, and it will take many years before the savings will be large.

There is no certainty, however, that the savings will not be used up as rapidly as they accrue. It is proposed that the State shall have the right to require adequate services and adequate facilities, including minor extensions in the geographical area which it is proposed to allot to each group company. A right of appeal to a tribunal to be set up is only to be allowed if a group company contends that the requirement involves a "capital" expenditure which would "seriously" interfere with its finances. It seems almost impossible that any one lot of requirements should have this effect; at the same time, a series of small requirements may have a cumulative effect in the course of time which is equally disastrous. This is the more possible, since the protection is not extended to increased operating expenses. The protection is much less generous than that afforded by the United States Constitution, which protects the railways from orders which would amount to confiscation of property.

This power to be vested in the State might be used to compel the railways to keep open branches and stations which are unremunerative. With the eight-hour day and the huge advances in wages, which are relatively highest in the case of the lowest grades, there must be a considerable number of stations and branch lines which are unlikely ever to earn sufficient to cover their operating expenses, even when the contributive value to the trunk line is taken into account. Their continued existence does not involve any capital expenditure. It would involve an annual drain on the group company's resources. This drain it is proposed the railway companies shall bear without any assistance or guarantee from the State. The State is to share in any surplus profits that accrue over and above some pre-war basis to be settled, but if there is any deficiency it is to have no liability, however large the deficiency may be. The principle of sharing in the surplus is sound, but it is only just if the State give some minimum guarantee, as is done in India. Investors in British railways are entitled to claim that the State shall not assume such wide powers of control over their activities without taking any financial responsibility for the outcome.

The pious hope is expressed that the amalgamation of companies in the respective groups will be carried out voluntarily. There is a certain amount of irony in the word when provision is to be made for compulsion in the case of non-completion in a time to be specified. It is highly probable that this provision will ensure that the companies for the most part will come to terms lest a worse fate befall them at the hands of "some tribunal."

The whole scheme turns on the possibility of "fixing rates and fares at such a level as, with efficient and economical management, will enable railway companies to earn an adequate net revenue." Such rates and fares it would seem must be a full 100 per cent. above the 1913 charges. Will the traffic bear such charges? There are many signs that the public has less money to spend. Business is not as active as it was. Competition of other countries is growing. Each increase in charges means a diversion of traffic to road and sea transport. There are many indications that further increases in rates and fares will not merely stop the growth in traffic, but will actually cause it to decrease. In that case the increases will not bring in the extra revenue anticipated. What, then, will be the position of the railways? Further increases will only accentuate the decline in traffic; reductions, whilst causing growth in traffic, will still leave the railways short. The opinion of the prescribed authority on what the rates and fares should yield will be of very little value and of no assistance to the railways if the traffic is not forthcoming. Yet prosperous railways are vital to the welfare of the country.—Yours, &c.,

W. T. S.

RICHARDSONS, WESTGARTH AND CO., LIMITED.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Our attention has been called to an article which recently appeared in your columns commending the policy of the directors in continuing to depreciate the value of the fixed assets. Generally, we readily agree that in years of prosperity a conservative policy should be pursued. This company, however, is an exception, and as large shareholders representing a majority of individuals —viz., about 1,500—financially interested in the company, we beg to submit the following facts :—

The preference dividend is four years in arrear and the ordinary shareholders have not received a dividend since 1907—13 years ago.

The fixed assets were then valued at £740,287. Since that date the works in extent have been doubled, but instead of the increased value being shown in the balance-sheet, a reduced figure of £631,000 is inserted.

To prove our contention that the assets are worth at least three times that amount, a neighbouring marine engine works, Messrs Blairs, have been sold for over £1,000,000.

Messrs Richardsons, Westgarth's output of marine engines is about 2¼ times larger than Blairs'. Surely the value of Richardsons, Westgarth's works is more than the figure now inserted in the balance-sheet of £631,000. These works could be sold to-day at a price which would discharge the arrears of preference dividend and give the shareholders a substantial premium on their shares.

In view of these facts, we say that it is wrong to continue to represent the assets at substantially below their real value, and to deprive the shareholders of a return on their capital for so many years. We have no hesitation in stating that the balance-sheet as issued does not represent the correct financial position of the company.—Yours faithfully,

Per pro. S. T. COULSON and JOHN MAGEE.
A. C. COULSON.

Church street, West Hartlepool, July 10th, 1920.

[In commenting on this affair in our issue of June 19th, we wrote :—" If in this particular case the directors are too generous in their allowances for depreciation, it is an error in the right direction, from which shareholders will benefit in the long run. It is, in fact, refreshing to find directors with sufficient courage to write down assets severely, instead of following the tempting and far too common practice of basing calculations on present boom values which cannot be permanent." We see no reason for modifying the comment.—ED., *Economist.*]

BOOKS RECEIVED.

A History of the Peace Conference of Paris. Edited by H. W. V. Temperley. Vol. I. Published under the auspices of the Institute of International Affairs. (London) Henry Frowde and Hodder and Stoughton. 42s net.

Stock Exchanges Ten-Year Record, No. 13, 1920. (London) F. C. Mathieson and Sons. 20s.

This ten-year review of prices of securities in London and Provincial Stock Exchanges is well known to most of our readers. This is the thirteenth issue, and covers the period from 1910-1919. Where par values have been altered relative prices are shown. The increase in capital of so many companies by issuing "bonus" shares has been taken into consideration by the compilers. Altogether, the work is good value for the money asked.

AMERICAN EXCHANGE.

Barclays Bank Limited, through their Foreign Branch, 168, Fenchurch-street, E.C.3, have concluded arrangements whereby they will, subject to approval of the transaction, insure importers and exporters against losses resulting from fluctuations in the American Exchange.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
July 28.	July 29.

Cheerfulness is the prevailing note in Stock Exchange markets. If members complain, as they are wont to do, that they are not burdened with overwork in the way of business, they admit that prices in many parts of the Stock Exchange are firm enough to encourage their clients to pay that attention to stocks and shares which is always lacking when quotations sag and markets are dull. Mr Chamberlain's refusal to give way on the question of E.P.D. for this financial year occasioned no particular surprise. Hopes are entertained of money becoming easier in the near future, and by reason of this Gilt-edged stocks show strength. A fair number of new issues have put in their appearance during the past few days, and it is said that there are a number of others trying to get their arrangements completed for an appeal to the public before August.

Victory Bonds touched 79 before dropping back to 77¾. War Loan at 86 was termed "flat," because earlier in the week it reached 86¾. But the market is not really bad, and a discount of 5s, which was quoted on Corporation of London new scrip (upon the underwriters being left with 63 per cent. of their obligations), quickly turned into a premium of over a point as investors came forward to buy the stock. The various newcomers who have lately put in an appearance in this market have the satisfaction of seeing their stocks at good prices, and naturally this has led to talk of other big issues in the near future. A Four-Town Loan of Lincoln, Coventry, Middlesbrough, and Shields was being underwritten yesterday.

Instead of the Spa difficulties causing heaviness amongst Foreign bonds, the market has been in a condition approaching buoyancy. French and Belgian bonds amongst the Europeans, Brazilian and Uruguay Fives in the South American list, Chinese and Japanese in the Far Eastern group, are amongst those which have been sought by the speculative investor. The revolutionary movement in China is disregarded. Mexicans of all kinds are disposed to recover, although the news from Washington upon which the improvement is based is admittedly vague. There is nothing doing in German Threes. Suez Canal shares at 140 are 10 points up.

The Lancashire and Yorkshire is the first of the Heavy Home Railway companies to announce its dividend, but Thursday's declaration had no effect upon the stagnation which prevails in this department. Evidently the public are too perplexed at the varying figures put forward in regard to the loss which is being made by the companies, and the additional freight charges necessary to adjust the position, for the stocks to hold out any investment inducement at present. Grand Trunks moved up sharply upon the appointment of ex-President Taft to act as arbitrator upon behalf of the company in its final negotiations with the Dominion Government. Argentine Rails enjoyed something of a spurt, but failed to hold the best prices touched. Dealings have started this week in the new Consolidated stock of the Antofagasta Railway. Brazilian Rails are a little better.

The Rubber market inclined to ease off after Mr. Chamberlain's cold douche to the hopes of those who looked for reduc-

tion this year in E.P.D., but the losses, which were insignificant, became mostly regained on the hopes of a rubber shortage materialising towards the end of the year. The Rubber Growers' Association propose that producers should consent to tap every other day, instead of daily as at present, with a view to reducing expenses, and to providing a better market for the raw produce. Amongst Oil shares the Trinidad group provided a revival of interest and mild excitement. Prices advanced substantially on comparatively little pressure to buy. Lobitos, which rose with a run on the eve of the meeting, subsided a shade from the top upon the chairman's announcement that there is nothing in the rumour as to the company's possible absorption by any other undertaking. Mexican Eagles showed something of their old form, with a vivid rise upon Paris purchases. Shells and Burmahs attracted a few buyers, the shares looking cheap in their ex dividend form. Of the more speculative counters, English Oilfields continue active, and Scottish American were briskly run up against the bears in the market.

The Textile group has strengthened materially, and after many days of dulness, the market for Motor shares assumed a less depressed appearance. Armament shares have recovered from most of their recent flatness. Swan, Hunters fell back after the chairman's speech at the meeting, in which he referred to prospects of serious American competition. Other Iron and Steel shares are moving narrowly, but on the whole with an upward tendency. Amongst Banking shares the feature is the strength of Hongkong and Shanghai, owing to an increased dividend. The various Pastoral groups attract no particular interest, Australian as well as Egyptian shares suffering from neglect.

While Kaffir shares maintain a fairly steady front, it is not pretended that business even approaches animation, and the public on this side are doing scarcely anything in South African Mining shares, Transvaal, Rhodesian, or Diamond. Rio Tintos improved on the expected settlement of the strike at the mine, and Broken Hills are better in several cases. Efforts are being made to infuse fresh life into the West African market, where Gold and Tin shares have come to the front under professional guidance. Mexican Mining shares rallied noticeably on the improvement in other Mexican descriptions, and Russians continue fairly firm. Two or three of the Cornish shares are better, in consequence of good developments on the East Pool property.

Stock Exchange shares have gone back during the past few days to 112, and the price of Nominations is about 65, the latter comparing with 650 touched earlier in the year, when there was something of a rush of new candidates for membership of the Stock Exchange.

5-15 Year Treasury Bonds, repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. These are still on offer. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

London Housing Bonds.—Registered bonds for £5 each or multiples thereof are obtainable for terms of 5, 10, or 15 years, at applicant's choice. Six per cent. interest and full repayment when due guaranteed by the London County Council on the security of London's rates. Interest payable each September 30th and March 31st. The money will be applied solely for the purpose of housing schemes approved by the Government, and in particular to finance the housing schemes of the Metropolitan Borough Councils. We referred to these bonds in a leader in the *Economist* on June 12th, page 1282.

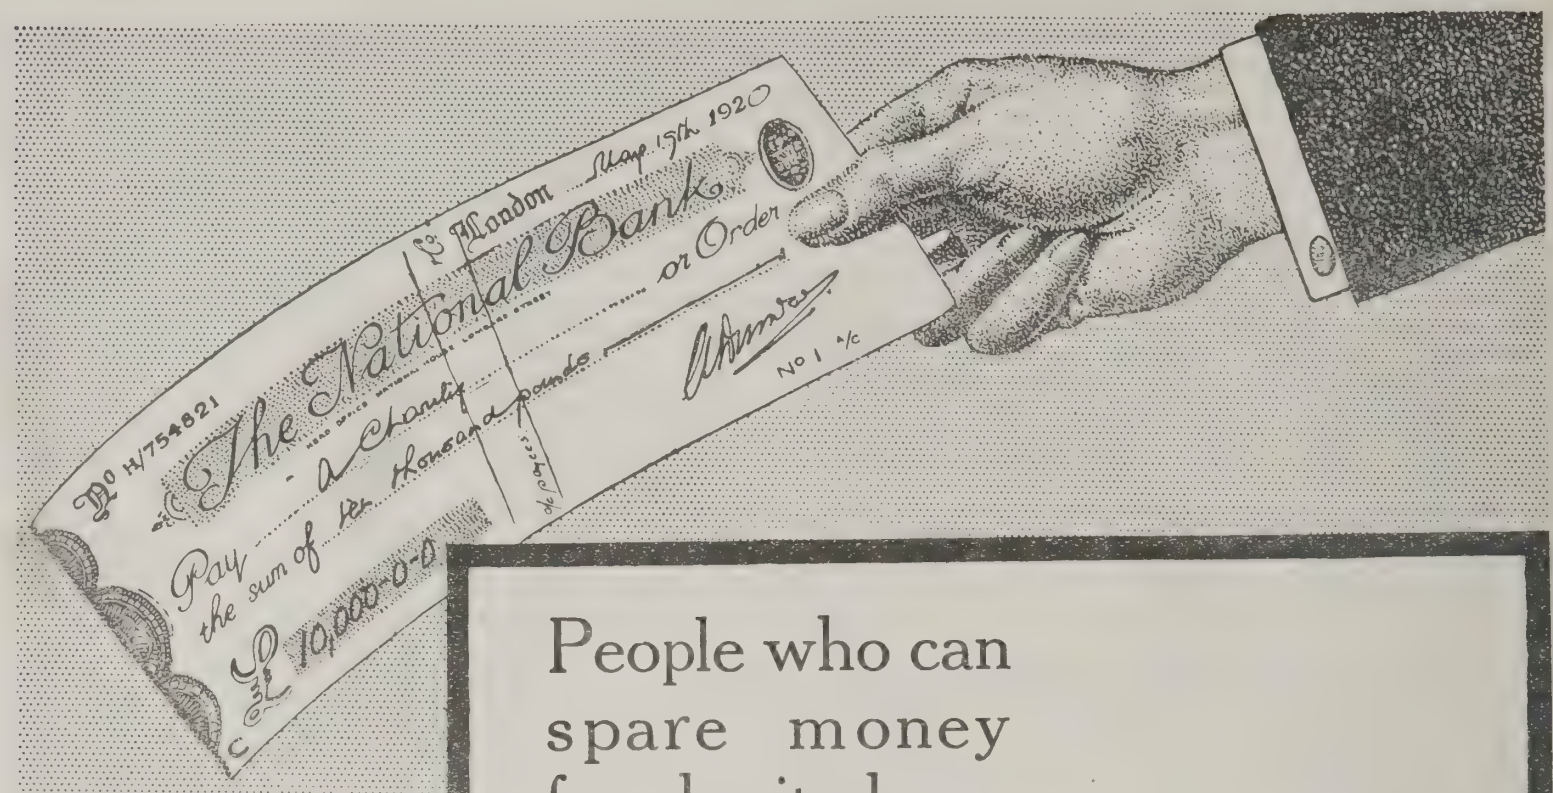
Harrod's, Limited.—Authorised capital £5,500,000, divided into 3,000,000 7½ per cent. cumulative preference shares of £1 each, of which 1,200,000 have been issued and are fully-paid, and 2,500,000 ordinary shares of £1 each, of which 1,950,000 have been issued and are fully paid. This is a further issue of 1,800,000 7½ per cent. cumulative preference shares of £1 each at par. There are no debentures. The company was formed in 1889, and is now one of the largest retail stores in the country. The additional capital is needed for financing its extensions, which are many and varied. In 1919 475,000 ordinary shares of £1 each were offered to the ordinary shareholders and employees of the company at a premium of £1 10s per share, and were all allotted. In March, 1920, 475,000 ordinary shares of £1 each were issued credited as fully paid as bonus to the existing ordinary shareholders by way of capitalisation of a portion of the reserve fund of the company. Sir Woodman Burbridge, Bart., and Mr Edgar Cohen, two of the directors of the company, have each sub-underwritten 10,000 shares, part of the present issue, at a commission of 2½ per cent., which must be considered a favourable sign. Under the articles of association, on a show of hands every member present in person has one vote, and at a poll every member present in person or by proxy has one vote for every share held by him. That the public hold the preference shares of this undertaking in considerable estimation may be judged by the fact that the 5 per cent. preference issue are quoted at a price which yielded about 5¼ per cent. A copy of the balance-sheet can easily be obtained from the company we know, but we should have preferred to see the balance-sheet issued with the prospectus. But, of course, existing shareholders will figure to a great extent in the subscription list, and these are already acquainted with the position of the company. The company is a remarkably well-organised and efficient undertaking, and for an industrial issue the shares may be considered as decidedly attractive.

Debenhams, Limited.—Authorised capital £7,000,000, of which (including the present issue) £4,338,000 has been issued. This is an issue of £750,000 10 per cent. cumulative preferred ordinary shares of £1 each at par. There is also authorised a debenture issue of £2,000,000, of which £1,000,000 has been issued. We dealt with the position of this company in the *Economist* for March 29, 1919 (see page 521). The present issue ranks for priority after £6,000,000 of authorised capital and debentures, of which £3,588,000 has at present been issued. The prospectus states that "the assets, excluding goodwill and after deduction of all trade liabilities as disclosed by the balance-sheets of Debenhams, Limited, at January 31,

1920, and of Harvey, Nichols, and Co., Limited, at February 7, 1920, amount together with the proceeds of the present issue to £4,770,847, and this, after deducting all prior charges and preference share capital, leaves a surplus of about £1,150,000 to cover the £750,000 10 per cent. cumulative preferred ordinary shares." Profits are given from 1910, in which year they amounted to £92,520. By 1919 they had grown to £341,170, and for 1920 they are recorded as £509,536. A minimum profit of £355,441 is necessary to provide for (a) all prior charges, including a compulsory allocation to reserve fund, and (b) the dividend of £75,000 on the 10 per cent. cumulative preferred ordinary shares now offered. The business is one of the best known of its description, and the offer of 10 per cent. may be considered generous. At the same time the investor should remember that a high rate of interest usually carries with it commensurate risks.

Cadbury Brothers, Limited. — Authorised capital £4,000,000, divided into 1,075,000 6 per cent. cumulative preference shares of £1 each, of which 876,889 have already been issued; 1,000,000 8 per cent. cumulative second preference shares of £1 each, of which 300,446 have been issued; and 1,925,000 ordinary shares of £1 each, of which 1,000,000 have been issued. The present issue is one of 600,000 8 per cent. second preference shares £1 each at par, and forms part of the above-mentioned authorised issue of 1,000,000 shares. The company was incorporated in 1899 to take over the business of Cadbury Brothers, cocoa, chocolate, and confectionery manufacturers, which was originally established in Birmingham in the year 1848, and was moved to Bournville in 1879, where freehold land was purchased and works erected. From 1899 to 1912 the business was carried on by a private company, but in the latter year it was converted into a public company, when a public issue of 200,000 £1 6 per cent. preference shares was made. The directors of the company are all actively engaged in the business, and together hold in their own right (subject to the agreement for sale to the holding company after mentioned) 810,761 ordinary shares out of the 1,000,000 ordinary shares actually issued. Holders of these 900,446 second preference shares will have as security £2,811,087 of assets. Although in these assets, goodwill, trade marks, &c., are valued at £390,000, investors have a substantial margin of security. We cannot see any reason why a clear statement of past profits could not be issued in the place of the certificate of profits supplied in the prospectus. However, the issue should meet with a good reception, and is one worthy of the investor's attention after consideration has been given to the usual industrial risks attached.

Fuller's United Electric Works, Limited.—Authorised capital £500,000, of which £401,507 has been issued. This is an issue at par of £200,000 7 per cent., income-tax free, short term notes, repayable at 105 per cent. on July 31, 1925. The business was established in 1875 to manufacture electrical batteries. The present company was formed in March, 1919, to take over and develop under one management John C. Fuller and Son, Limited; the Fuller Accumulator Company, Limited; Fuller's Wire and Cable Company, Limited, and Fuller's Carbon and Electrical Company, Limited. A full balance-sheet, showing the position of the company at March 31, 1920, is published in the prospectus. This shows that the notes are well secured as regards capital. No mention is made in the advertised abridged prospectus as to the past profits of the businesses taken over by the new company. We dealt with this company in the *Economist* for April 19, 1919 (see page 650).



Glenfield and Kennedy, Limited. — Authorised capital £750,000, of which £393,840 has been issued and paid up. This is an issue of 31,160 7½ per cent. "B" cumulative preference shares of £1 each at par, and 100,000 ordinary shares of £1 each at par. Including the present issue, the total paid-up capital of the company will consist of £100,000 of 4½ per cent. "A" cumulative preference shares of £1 each, £100,000 of 7½ per cent. "B" cumulative preference shares of £1 each, and £325,000 of ordinary shares of £1 each. Kennedy's Patent Water Meter Company, Limited, was established in 1852, and the Glenfield Company, Limited, in 1865. These companies were amalgamated in 1900 under the name of Glenfield and Kennedy, Limited. The company undertakes hydraulic and general engineering work, an has connections at home and abroad. Profits are given from 1913, and these show that war conditions had but little effect either way on the company's earnings. Net assets are valued at £551,315. The directors of this company are to be congratulated upon issuing a remarkably clear statement of affairs to the public. Preference shareholders have full voting powers. The issue should be well received.

Harris (Calne) and the General Produce Company, Limited.—Authorised capital £1,750,000, in ordinary shares of £1 each, of which 850,000 are issued. There are also £750,000 of 8 per cent. convertible 6-year notes and £600,000 of these are issued. 418,500 ordinary shares and £100,000 of notes are being subscribed at the issue price by certain members of the firms and shareholders in the companies owning the businesses to be acquired by the company. The directors and their friends have agreed to subscribe on underwriting terms for £210,000 of notes and 94,500 ordinary shares of the company. The vendors to the company are taking 50,000 ordinary shares, credited as fully paid, in part payment of the purchase price, and there are now offered for subscription 287,000 ordinary shares of £1 each at par and £290,000 8 per cent. convertible 6-year notes at 96 per cent. The notes, unless exchanged, will be repayable at par on June 1, 1926. We assume by this that they must be repaid by this date. The conversion option is exercised by the holder giving one month's notice in writing to the company before June 1st or December 1st in any year during currency to exchange the notes into ordinary shares of the company at the rate of 22s 6d of notes for 1 ordinary share of £1, fractions of notes being paid off at par in cash. Provision will be made out of the proceeds of this issue for satisfying any debentures, debenture stock, or other charges on the properties of the companies whose businesses are being acquired, which are still outstanding, and the articles of association of the company provide that so long as any of the 8 per cent. notes are outstanding it shall not create or issue any debentures other than to secure bankers' loans to the company. The company has been formed to acquire the bacon and produce businesses of:—Charles and Thomas Harris and Co., Limited, of Calne, London, Glasgow, &c.; established 1770. Pullin, Thomas, and Slade (late James Dole and Co.), Limited, of Bristol; established about 1820. Bristol Colonial Produce Company, Limited (late Crew, Widgery, and Co.), of Bristol; established 1883. Gardner, Thomas and Co., of Bristol; established 1854. West of England Bacon Company, Limited, of Calne, Redruth, and Totnes; established 1880. William Titley and Sons, of Bristol and Bath; established 1748. Samuel Iles, Limited, of Bristol; established 1878. S. M. Wilmot and Co., Limited, of Bristol; established 1896, and William Cary and Son, of Shepton Mallet and Bristol; established 1815. Net assets are valued at £827,892 and the surplus arising from the receipt of the present issue it is estimated will amount to £113,400. Profits are only given for the three past years. The convertible notes will be secured by 1½ times their value in assets, and although it may be considered that the security is valued at to-day's boom prices, on the other hand they "will be repayable on June 1, 1926." The issue of ordinary shares and the conversion rights into ordinary shares cannot be said to be attractive.

Midland Electric Corporation for Power Distribution, Limited.—Authorised capital £600,000, divided into 200,000 7 per cent. cumulative preference shares and 400,000 ordinary shares, all of £1 each. A 5 per cent. debenture stock for £500,000 has been authorised, of which £495,000 has been issued. There have been fully paid and issued for cash 200,000 preference shares and 150,000 ordinary shares. This is an issue of a further 250,000 ordinary shares at par. Profits are shown from 1915. The advertised prospectus states that the company has in operation 79 miles of extra high tension cables and 43 miles of low tension cables. No balance-sheet is submitted to the intending investor in the advertised prospectus, but from the information given in this advertisement the margin of surplus profits available for ordinary shareholders after all contingencies have been provided for is not very wide.

Brown Bros., Limited.—Authorised capital £700,000, of which there have been already issued 175,000 cumulative preference shares of £1, and 275,000 ordinary shares of £1. There are now offered 50,000 7½ per cent. cumulative preference shares at £1, and 100,000 ordinary shares at £1 2s. The prospectus states that "Applications may be made for preference shares alone. Applicants for ordinary shares must, however, apply for preference shares at the same time, in the proportion of not less than one preference share for each two ordinary shares." The company was formed 23 years ago to carry on the business of Brown Bros., wholesale motor and cycle accessory manufacturers, of Great Eastern street, London, E.C. We referred to this company in the *Economist* for October 25, 1919 (see page 773). Profits are given from 1911. Net assets, inclusive of the proceeds of the present issue, are given as £738,947, which compares with a total issued capital of £600,000. Goodwill and patents appear in assets as worth £149,640. Preference shareholders have limited powers of voting. The preference shares are well secured both as regards capital and interest, but there are more attractive preference issues open to the investor to-day. The ordinary shares are an industrial speculation.

J. and E. Atkinson, Limited.—Authorised capital £450,000, of which (including the present issue) £300,000 has been issued. This is an issue of 100,000 ordinary shares of £1 each, at 35s per share, and forms part of a total issue of £250,000 of ordinary capital. There are also 50,000 preference shares of £1 each, carrying interest at 6 per cent., free of income-tax, and £25,200 of debentures, redeemable at the rate of £1,900 per annum, and bearing interest at 5 per cent. The business was founded in 1799, and the present company was registered in 1896. Its principal products are soaps and perfumes. For 1918 a dividend was paid of 15 per cent., free of tax, and for 1919 a dividend of 20 per cent., free of tax, was declared. But it should be noted that this was on an ordinary capital of £150,000. Profits are given only from 1916, and the prospectus states that, exclusive of goodwill, there is an excess of assets over liabilities amounting to £174,990. But from this sum has to be deducted the dividend on ordinary shares, which is £30,000. The total capital previous to this issue was £200,000, and there are debentures for £25,000. Although we are told

People who can spare money for charity have money to invest

Lord Weardale, the Chairman of the "Save the Children Fund," gives the following striking tribute to the advertising value of "The Daily Mirror." He says:—

"The largest individual amount came from one of your readers. The cheque was for £10,000. We have found, throughout the appeal, 'The Daily Mirror' is unquestionably the most remunerative advertising medium." In the following words he gives a definition of "The Daily Mirror" circulation:—"Not only does it reach the richer classes, but also, it gets to the average man and woman." Finally he states:—"It is chiefly this fact that has made our fund such a huge success."

The readers of "The Daily Mirror" are just the very classes to whom advertisers desire to appeal—the classes who purchase the bulk of the nation's high-class goods. Will you let "The Daily Mirror" carry your appeal and so get in touch with the vast army of potential Investors?

that the dividends on the ordinary shares since 1896 total 221¼, free of income-tax, we should prefer to know something more about the pre-war financial history of this undertaking before recommending it to our readers.

George Peak and Co., Limited. — Authorised capital £300,000, divided into 100,000 8 per cent. cumulative preference shares of £1 each and 20,000 ordinary shares of £10 each. Of the ordinary capital 10,500 shares have been issued, on which £84,487 has been paid up. This is an issue of the whole of the preference shares at par. The company was incorporated in the year 1886 for the purpose of acquiring the business of merchants and warehousemen carried on by the firm of the same name. Net assets are valued at £104,123, and nothing is asked for goodwill. Profits are given from 1915. The sum of £35,000, "being undivided profits," has recently been capitalised and additional ordinary shares have been issued for this amount. Preference shareholders have limited powers of voting. The issue is moderately well secured, but there are better investments of this type available.

The Bournemouth and Poole Electricity Supply Company, Limited. — Authorised capital £500,000, of which £400,000 has been issued and is fully paid. There is also 4½ per cent. debenture stock outstanding for £187,500. This is an issue of £150,000 7½ per cent. seven-year notes at par. The notes will be repayable at par on July 1, 1927. As in the case of another company this week, we assume that the notes must be repaid by this date. The interest should be met without much difficulty. The company may redeem the notes by purchase at any time or by drawings at a premium of 2 per cent. after July 1, 1923, on giving three months' notice in writing to the registered holder, such notice terminating on any date on which interest is payable. The company was formed in 1897 to carry on the business of supplying electricity. The company is working under the following Provisional Orders: The Bournemouth Electric Lighting Order, 1890; the Poole and Branksome Electric Lighting Order, 1897; the Christchurch and District Electric Lighting Order, 1899; and the Pokesdown Electric Lighting Order, 1902. The company has also a controlling interest in the Richmond (Surrey) Electric Light and Power Company, Limited. Profits are given from 1914. Assets are valued at £766,947 and certain liabilities are mentioned in the prospectus, which amount to £253,109. The notes are well secured.

The Moffat Steamship Company, Limited.—Authorised capital £120,000, divided into shares of £1 each. The whole of the shares are now offered for subscription at par. The company has been formed for the purpose of acquiring a fleet of steamers "suitable for the near continental and coastwise trade." It is stated that "freights are high and, with the advance in railway rates, it is anticipated they will be maintained." Two steamers, at present in course of construction, have been secured. Each has a capacity of 300 tons deadweight, and the purchase price will be £53,000. It is proposed also to buy two more boats similar to these. The net trading profits of these four steamers are estimated to be £45,000, "after charging all expenses and making adequate reserves for depreciation and renewals, but subject to taxation." The registered offices of the company are at Grimsby, and the directors appear to be men who understand the business. These small steamers engaged in the coastwise trade at present are undoubtedly making substantial profits, but no doubt competition in the near future will tend to level coastwise freights.

William Edwards (Swansea), Limited. — Authorised capital £150,000, divided into 50,000 8 per cent. cumulative preference shares of £1 each, and 100,000 ordinary of £1 each. This is an issue of 50,000 8 per cent. cumulative preference shares of £1 each and 94,950 ordinary shares of £1 each, all at par. The company has been formed to acquire the business of drapers and furnishers carried on by Mr William Edwards at Swansea. Assets are valued at £150,539, but this sum includes £20,000 for goodwill. The purchase-price is £125,000, plus a perpetual annual rent-charge of £1,000 per annum to be created upon the freehold property. This is redeemable by the company within seven years at 20 years' purchase. Profits are given from 1916. The pre-war financial history of the concern is not shown. The preference shares are reasonably well secured, and the ordinary shares are a speculative industrial risk. The issue is one mainly for consideration by those who have knowledge of local conditions.

COMPANY MEETINGS, &c.

BANK OF NEW SOUTH WALES.

GREAT ACTIVITY IN THE BUSINESS.

At the half-yearly general meeting of the Bank of New South Wales, held at the Chief Banking House, Sydney, on Friday, May 28, 1920, the Chairman, the Hon. Sir Charles K. Mackellar, K.C.M.G., M.L.C., president of the bank, in moving the adoption of the report, said:—Gentlemen, before moving the adoption of the report and balance-sheet, I will as usual give some explanation of the figures, comparing the present balance-sheet with that of March, 1919.

DEPOSITS.

These figures indicate great activity in the business—the deposits are much higher, having gone up to £49,417,000—an increase of £4,480,000. This is due chiefly to two causes—the high prices prevailing for the primary products—and secondly the large amount of loan money available for expenditure locally, a certain proportion of which comes to the bank in the shape of deposits. The fixed deposits have increased, in a moderate degree, but the greater portion of the increase is in the current accounts. We are carefully watching the incidence of these, and until we can gauge their permanence on present levels are keeping liquid reserves against them well in hand.

NOTE CIRCULATION AND BILLS PAYABLE.

The note circulation in New Zealand has decreased £487,000, and is now not much above normal. As I have said at previous half-years, the circulation of the banks in New Zealand has proved an effective and economical factor in carrying on the finance of the Dominion.

Bills payable as showing in the balance are higher by about £1,000,000, arising entirely out of transactions on the import side of the country's trading. The volume of business has been heavy in any case, but the fact that in several important cases drafts have been resorted to for remittance purposes instead of telegraphic transfers has naturally swollen the balance outstanding.

The new capital recently created has been satisfactorily taken up, and the sum to make up the £5,000,000 at the balance was only £235,000. We expect that by the end of this year the full sum will be in hand.

ASSETS.

On the assets side the first line item has reached the large total of £38,000,000. The actual cash holding is nearly £17,000,000, mostly on this side. Short call money in London was £2,790,000. The short-dated Treasury bills of the British Government, having a few months currency, £3,900,000; these are well spread first-class securities. The investments in British Government, Commonwealth Government, and the securities of the New Zealand Dominion, the Australian States and municipal and kindred bodies amounted to £9,200,000, and the items in transit and the bills receivable in London amounted to £4,456,000. The increase in the deposits is largely responsible for the increase in the first line total, and the wheat and wool schemes entered into in conjunction with the Commonwealth and British Governments has led for the time being to an accumulation of funds in London, which though very profitable to some extent interferes with our policy of preserving a due equilibrium between London and Australia with a preponderance for the latter because our principal business is at this end. However, we are giving close attention to this phase of our operations, and to the policy I have referred to.

ADVANCES.

There has been a large reduction in the special advances made in support of the wool and wheat schemes evolved during the war which is offset by the increase in the London funds just referred to. Ordinary advances have increased apparently only £80,000, but the net result is brought about by an increase of about £1,000,000 in direct advances by way of overdrafts, and an equivalent decrease in bills discounted here and those of London on Australia.

The overdrafts have increased partly by reason of expansion of trade, but more particularly because the drought has caused our country customers to lean more heavily than usual upon us, within the limits of safety to the bank we feel it to be our duty to extend all monetary assistance in the grave conditions which have prevailed in most of the country districts of Australia for some time past. We are assisting to preserve stock and to put in crops, feeling well assured that it is in the best interests of the bank itself and of the Commonwealth generally to support the great primary industries in their hour of need.

TAXATION.

The taxation to which the bank with the rest of the community is now liable is heavy. This half we have paid altogether at various points £133,000, and for the 12 months £201,000. It was inevitable that the large charges for interest on the War Loans would impose this burden on our earnings, and as the full financial effects of the war have not yet been reached it is probable that the taxation will be heavier in the near future rather than lighter.

I have already made some reference to the severe drought which has afflicted a large portion of this Continent. So far as the bank's business is concerned it is so well spread as to locality and as to the amount at risk in individual cases that the average which we always maintain with regard to our operations is not seriously disturbed, and we continue to make large provision for contingencies. Experience has taught us what to expect, and the same experience justifies us in believing that when good seasons recur as they always have done, the recovery will be rapid, and as a set-off for losses the prices for stock and for wool and other products are likely to remain at a high level. In other respects business generally throughout our sphere of operations is in a satisfactory position, but we are watching events very closely, for as I have said on previous occasions the transition financially from war conditions to normal is not an easy one, and the problems arising therefrom have to be dealt with intelligently and with a very large exercise of common sense.

MOTOR UNION INSURANCE COMPANY, LIMITED.

A VERY SATISFACTORY POSITION.

The 13th ordinary general meeting of the Motor Union Insurance Company, Limited, was held, on the 14th inst., at the Criterion Restaurant, Piccadilly, London, Mr C. H. Dodd, the chairman of the company, presiding.

The Manager and Secretary (Mr H. F. Baker) having read the notice convening the meeting and the report of the auditor,

The Chairman, in moving the adoption of the report and accounts, said that they were exceptionally interesting, in that they represented the results of the company's working for the first year after war. A comparison with the accounts of 1918 would show the change in the conditions of the company's business occasioned by the turnover from war to peace. Taking the fire insurance account, it would be noticed that premiums had risen from £134,847 5s 4d in 1918 to £423,346 6s 9d. That was a very big rise, but the account was in a very satisfactory condition, and from it they had been able to transfer £31,414 18s 5d to the credit of profit and loss. The personal, accident, and employers' liability accounts showed figures which were generally satisfactory. With regard to the general insurance account, which represented chiefly the motor insurances in which the company specialised, and which had been the backbone of the business since its commencement, it followed the course which had been fully expected. Premiums had risen from £227,878 3s 3d for 1918 to £468,833 6s 2d for 1919. That very large increase was due to the fact that motoring became general again directly the Armistice was signed; but, unfortunately, though not unexpectedly, instead of a profit to transfer to the profit and loss account, there was a loss of £49,178 4s 8d. That loss had been fully anticipated by the directors, because it was quite obvious that pre-war premiums were absolutely inadequate to meet the additional cost of repairs and the general additional expenses of post-war conditions. But since January 1st the premiums had been raised by 20 per cent., and in April they were raised by a further 30 per cent., and on this latter basis it was hoped that the accounts next year would show a fair and reasonable profit on that business.

MARINE AND LIFE ACCOUNTS.

The marine account had also followed the lines anticipated. The premiums for the year 1918 had amounted to £1,379,662 18s 9d, and had fallen to £595,378 2s 6d for the year under review. That was entirely due to the fact that the war risks, which had comprised a very great portion of the business, had now entirely ceased, so that the company depended upon its very fine and well-managed general marine account for premiums in the future. Although war-time figures could not be expected now, the board certainly did expect a profitable account on the marine insurances. The life insurance business was growing slowly, but it was not a matter that could be built up in months or in even a few years; it was a long process.

Dealing with the profit and loss account, he remarked that the balance at credit was £152,627 17s 6d, as against £245,835 4s 10d. The reduction was mainly due to the loss incurred on the general insurance account, and the reduction in the amount transferred from the marine insurance account. Of the balance-sheet, it was only necessary to say that the total assets now amounted to £2,454,936 9s 11d, as against £2,124,883 1s 7d in the previous year. With the balance available, the directors pro-

posed to deal by paying a further dividend of 10s per share on the ordinary shares, an interim dividend of 10s per share having already been paid, by placing £50,000 to tax reserve fund, by making a grant of £5,000 to the staff pension fund, and by carrying forward £20,908 0s 6d. It was to be noted that the dividends on both preference and ordinary shares were fully covered by the amount of £93,270 received as interest, dividends, and rents, so that it had not been necessary to call on the trading profits of the company in order to pay the dividends. That was a very satisfactory position. Since the closing of the accounts the balance of the ordinary share capital—100,000 shares—had been issued at £5 premium. The amount received as premium—less costs of the issue—had been placed to reserve, and it had, therefore, not been considered necessary to add anything to the reserve funds, other than the tax reserve fund.

INTERIM DIVIDEND PROSPECTS.

The board were hoping that it might be possible to declare an interim dividend in respect of the current year before Christmas. Mr Whitcomb, who had been the general manager of the company since its formation, and to whose skill and energy the growth and success of the company had been very largely due, had felt compelled, by reason of other calls upon his time, to resign his post. In his place, Mr H. F. Baker had been appointed, while Mr C. B. W. Forde and Mr H. K. E. Ostle, who had been with the company for a considerable time as fire manager and in the renewal department respectively, had been appointed sub-managers.

Sir Laurence R. Philipps, Bart., seconded the motion, and the Chairman having replied to questions, it was carried unanimously.

UNITED BRITISH INSURANCE COMPANY, LIMITED.

A WIDER SCOPE OF BUSINESS.

The ordinary general meeting of the United British Insurance Company, Limited, was held, on the 14th inst., at the Criterion Restaurant, Piccadilly, London, Mr C. H. Dodd, the chairman of the company, presiding.

The Manager and Secretary (Mr H. F. Baker) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, observed that this was the first meeting of shareholders since the undertaking had been converted from a private into a public company. The accounts would be of interest to the shareholders, because they furnished information with regard to the various classes of insurance which the company undertook. It was shown that they carried on business in fire insurance, in personal accident insurance, in employers' liability insurance, in general insurance, which was mostly in connection with motors, in marine insurance, and in life insurance, so that it comprised pretty nearly all classes of insurance which existed.

THE ACCOUNTS.

The fire insurance account showed that the premiums last year amounted to £211,349, and that £3,305 had been transferred to the credit of profit and loss account. That was after making full reserves for unexpired risks and full allowance for claims paid and outstanding. The personal accident account was at the present time of small dimensions, but the figures showed a profit, so that they were on the right side, and although the amount transferred to the credit of profit and loss account was comparatively small, the board had every hope that that particular class of insurance would grow into large figures before long. Employers' liability insurance also showed a profit; the premiums there were comparatively small, but it was a growing business. They were transferring £354 to the credit of profit and loss account. The general insurance account—which, as he had already mentioned, represented mainly motor insurance—showed premiums for last year of £12,811. After making full reserves they had been able to transfer to the credit of profit and loss account the sum of £746. The marine insurance account naturally showed a fall in premium income as compared with that of the previous year, war-risk insurance having disappeared. The company, however, had an excellent general marine insurance business, and the board had every hope that that account would continue to show good figures and a reasonable and fair profit on the turnover. They had transferred to profit and loss account £59,329. As to the life insurance account, which had only recently been commenced, he need say nothing beyond that it was growing, and that, with a number of able agents all over the country, the board expected to see it attain large dimensions before many years. They had transferred nothing from that source to profit and loss account. The profit and loss account disclosed a balance of £147,238. The directors recommended that a final dividend of 12½ per cent., free of income-tax, should be paid, making, with the interim dividend, 25 per cent., free of tax, for the year, that £60,000 be placed to tax reserve fund, and that the balance of £37,238 should be carried forward.

NEW CAPITAL ISSUE.

Since the date of the last meeting the capital had been increased by the issue of a further 200,000 shares at a premium of £3 per share. At the time of closing the books £400,000 had been received in that connection. Of that amount, £300,000 might be treated as premium, and it had been allocated by placing £200,000 to general reserve £63,000 to investment reserve, and by writing off £27,000, the expenses of the new issue. In view of that allocation, it had not been considered necessary this year to place anything to reserve other than the amount to tax reserve fund, to which he had just referred. The receipts disclosed in the profit and loss account in respect of interest, dividend, rents, &c., £63,648, were more than sufficient to cover the full amount of the dividend which had been declared, and it had not been necessary to call on the trading profits of the company in order to pay any part of the dividend. It was hoped between now and Christmas to pay an interim dividend in respect of the current year. With reference to the United States branch, they had made arrangements to cease underwriting. The tendency of legislation in America, to judge from information received from various quarters, was to make the business of insurance by foreign companies more difficult than ever. Some time must elapse before the account could be finally wound up, but the directors had no reason to anticipate that the company would suffer any financial loss. In conclusion, the Chairman referred to the resignation of Mr Whitcomb from the position of general manager, owing to calls on his time in other directions. Mr H. F. Baker had been appointed manager in his stead, while Mr C. B. W. Forde and Mr H. K. E. Ostle had been appointed sub-managers.

Sir Lawrence R. Philipps, Bart., seconded the motion, and after a long discussion it was carried with one dissentient.

AFRICAN AND EASTERN TRADE CORPORATION, LIMITED.

THE COMPANY'S WIDE EXTENSIONS.

MARKETING THE RAW MATERIALS.

THE OUTLOOK IN WEST AFRICA.

The annual ordinary general meeting of the African and Eastern Trade Corporation, Limited, was held on Friday, July 9th, in the banqueting hall of the Exchange Station Hotel, Tithebarn street, Liverpool. Mr J. H. Batty (chairman of directors) presided over a large attendance.

The Chairman said: Ladies and gentlemen, since our last annual meeting we have assumed the name "African and Eastern Trade Corporation, Limited." The dominant reason for this was to indicate the extended sphere of the company's operations, and the broader policy evolved to meet the purposes of the amalgamation carried through since last year.

I shall have occasion in the course of my address to refer more in detail to the various extensions of the business in other markets than West Africa.

MR COTTERELL'S RESIGNATION.

After the amalgamation had been carried through, Mr Cotterell, your chairman, intimated his intention of retiring from the board in accordance with the purpose he expressed at our last annual meeting. Whilst accepting his resignation, your directors desire to express and record their sincere regret and warm appreciation of his prolonged services to the African Association, Limited, and West Africa in particular. I feel sure that I am right in echoing these sentiments on your behalf, and in conveying to Mr Cotterell our united good wishes for much happiness in the coming years of well-earned retirement.

I would remind you that Mr Cotterell was one of the original directors on the formation of the African Association, Limited, in 1889, and held the position of chairman since 1900. A wish has been expressed by some shareholders to substantiate their regard and appreciation of his past services in the form of a cheque. An intimation of this has, therefore, been included in the directors' annual report, and will be dealt with in the form of a resolution after the report and accounts have been approved and adopted.

When accepting the chairmanship, I suggested it be understood that, provided I was re-elected annually as laid down in the memorandum and articles of association, the appointment should be for five years, and, if specially desired, might even be extended to ten years, but at the end of that period I would not allow myself to be renominated again. It is so often taken for granted that these are life-long appointments, and therefore you will understand that the purpose I had in view was to make the way clear for a younger man.

I also desired to explain that the active management of the board consists of an executive committee of eight directors, six of whom have a personal knowledge of West Africa. Two, namely, Mr A. A. Cowan and Major-General W. H. Grey, C.M.G., have just returned from an extended tour from the Congo to the Gambia, covering about 20,000 miles, and their reports have provided the board with up-to-date knowledge, and will enable the executive to formulate a comprehensive policy for the development of the company's resources throughout the extended sphere of its West African activities.

It is my intention that in the future these annual addresses from the chair shall be compiled by the executive outlining the work done and the policy carried out by your board.

FIRMS IN THE CORPORATION.

The amalgamation originally consisted of four firms: Miller Brothers (of Liverpool), Limited; Millers, Limited; and F. and A. Swanzy, Limited. These firms, with the African Association, Limited, were in close alliance with each other for many years past. The basis of coming together under one name was on an asset pre-war value without goodwill or premium. It might be mentioned that F. and A. Swanzy, Limited, is one of the oldest existing firms in the West African trade, having been established on the Gold Coast over 100 years, and their name is a household word among the natives.

In connection with the negotiations which eventually brought about the fusion, I should like here to acknowledge and express on behalf of the amalgamated firms their appreciation of the part taken by Colonel W. Nicholl. I do not think that I am exaggerating his services in saying that the fusion would not have been happily accomplished without his patience, resourcefulness, and tact, in carrying on negotiations of a very delicate nature.

Shortly after the completion of the fusion further acquisitions of West African businesses were concluded, consisting of:—The Lagos Stores, Limited; The African Traders, Limited; Hatton and Cookson, Limited; Tarquah Trading Company, Limited; W. D. Woodin and Company, Limited. Securing the controlling interests in these businesses has immensely strengthened the corporation's position in Lagos, Southern Nigeria, South-West Africa, and the Congo, as well as giving them a direct interest in Libéria.

In the acquisition of manufacturing businesses the policy of your directors is on the lines of securing a market for their raw materials purchased in West Africa, and of obtaining supplies of goods to enable them to make those purchases in West Africa and other markets.

A. J. CALEY AND SON, LIMITED.

You will remember that last year you were advised of the acquisition of A. J. Caley and Son, Limited, chocolate manufacturers, of Norwich, to secure an outlet for the company's purchases of raw cocoa. The nominal capital of that company was £120,000, and since then it has been increased to £1,000,000. We have now in course of erection four factories, which will treble the output. It is expected that we shall be in possession of these factories towards the end of the year, and the expenditure involved, including the building, machinery, and equipment, will amount to about £500,000. Just recently there was an issue of 300,000 8 per cent. preference shares to their existing shareholders and customers, and a copy of the prospectus of this issue was circulated among the corporation holders, and I hope that many of our shareholders will have subscribed to this issue. I am in a position to assure you that this business is developing very satisfactorily, and hitherto we have not been able to overtake the increased business during the past year. You will be glad to know that this has proved an excellent investment, and there is every prospect of its continuing to do so.

On leaving this meeting each one present will be given a small parcel of Caley's chocolate, so that you may have some idea of their production and the quality of the goods they produce. I have no doubt that you will confirm my assertion that they aim at giving most excellent value. Our policy is to develop this business on a reputation of good quality and value.

LODER AND NUCOLINE, LIMITED.

Following the policy of securing a market for our raw materials, we purchased the controlling interest in Loder and Nucoline, Limited, and I am able again to reassure you that this purchase is more than justified by the results, and will prove a most excellent adjunct to our business and resources. We have also under consideration the extension of these works, but at present there is nothing definitely decided on.

A short time ago an announcement was made of negotiations for fusion with the British Oil and Cake Mills, Limited, and ultimately you were advised that these negotiations were terminated without result. The main reason for these negotiations falling through was in connection with the appreciation of their shares. At the time when we opened negotiations with them their shares were quoted at about 36s, from which they steadily rose to 56s. We felt that this appreciation in the price resulting from these negotiations made it impossible to put forward a fair proposal, and one which the shareholders of the British Oil and Cake Mills would accept in view of the increased market value of their shares. This is a typical instance to prove how necessary it is for any such negotiations to be completed at once and before they become publicly known.

ACQUISITION OF ELLESMERE PORT SITE.

The company have secured a desirable site at Ellesmere Port with a considerable frontage on the Manchester Ship Canal. This position is a valuable one, and should prove an important acquisition to the company in its developments in the near future.

As regards the protection of supplies for trade purposes in West Africa, your directors have obtained the controlling interests in several Lancashire mills known to have devoted a great portion of their output to the West African trade. In securing the first call on the output of these mills we have ensured to our businesses a supply of special cloths and designs peculiar to the West African trade. Our object is, as far as possible, to become self-supporting, both as regards goods required to meet the demands in West Africa and to secure an outlook for our produce in the United Kingdom.

Another department of the trade in West Africa which is assuming larger proportions year by year is silk handkerchiefs. The trade is developing rapidly as the natives become more wealthy and the hinterland is opened up by railways and roads. We have secured the controlling inteersts in a concern in Macclesfield which has hitherto devoted a great part of its time to silk productions peculiar to the West African trade.

WORLD-WIDE POLICY.

In adopting the name "African and Eastern Trade Corporation, Limited," the directors of the amalgamated firms had in view in coming together not only to consolidate their interests in West Africa, but to make use of their resources and experiences in other markets throughout the British Empire, and generally to take advantage of the developments open to British enterprise, and to further British interests and prestige, a thing that it would have been impossible to do individually. During the past year operations have been extended to East Africa with the intention to have a chain of stations right across the continent linking up East Africa with the Congo. Also the company is now established in Morocco, Syria, Palestine, Mesopotamia, Persia, Constantinople, Roumania, Bulgaria, and Singapore. It is hoped that shortly we will have interests in Egypt, and possibly China.

With reference to these extensions, the operations meantime are small, but the progress is satisfactory, and the prospects most encouraging. We believe that these new markets will prove of immense value in making use to the fullest extent of our resources, and the company will in the near future bear its fair share of furthering and developing the resources of the British Empire in extending British influence throughout the world's markets. The turnover in 1919 exceeded £22,000,000, of which about one-fourth was contributed in businesses outside West Africa.

ADMINISTRATION.

Your directors are aiming at having central administrative offices, and until this is done it is not possible to perfect the organisation necessary to obtain the fullest benefit of the amalgamations. About two years before the war Messrs Millers and Swanzys, of London, purchased the 99 years' lease of a plot of land in Kingsway and erected there a building known as "West Africa House." During the war the Government requisitioned these premises, and these companies took temporary offices in Wigmore street, but during the past two months have again returned to West Africa House. We find that West Africa House is inadequate for our staff, and therefore we looked round for larger premises, but not being able to find anything suitable we acquired two plots in Kingsway near Great Queen street, and towards the Holborn end. We are now erecting a fine building, which, when finished, will be the most notable building in Kingsway. It will have approximately a superficial area of 122,500 feet, and we are hoping that it will be finished towards the end of next year. The approximate cost of the building will be about £400,000. We expect to let off sufficient after retaining the accommodation we require to pay interest on the capital, allowing sufficient for redemption, and that our office accommodation will be at a nominal rent. The site is a most valuable one, and is practically an island site, with the exception of a small building at one corner known as "Hampden House," which we have also purchased. The price paid is a reasonable one, and will give a handsome return. I am advised that when the building is com-

pleted the company should be able to sell same at a very considerable profit. You will be pleased to hear that West Africa House is valued to-day at more than two and a-half times the cost at which it stands in our books.

WEST AFRICAN DEVELOPMENT.

The further extension and development of the unlimited resources of West Africa is dependent upon the opening up of the hinterland by railways and roads. The extensive programme of the present Governor of the Gold Coast, Major-General Guggisberg, clearly indicates that he is alive to the importance of opening up the resources of the Gold Coast Colony by extensions of railways and linking up the two lines between Accra and Sekondi by a railway running lateral to the coast, and yet so far inland as to tap the area which is now extensively under the cultivation of cocoa. In an address to the Liverpool Chamber of Commerce, on his arrival in England last month, he referred to the steps taken by the Government to start experimental farms of sisal and coprah, to encourage the natives in cultivating these two products, so that land which may not be suitable for cocoa growing may be used for these purposes. In addition to the development of railways, the Secretary of State, Lord Milner, in an address at the Corona dinner in London, on June 22nd, stated that the Government had practically decided on the construction of a deep-sea harbour at Takoradi Bay. This work in itself will involve an expenditure of some £6,000,000 to £7,000,000, and will probably take five to six years to complete.

With reference to Nigeria, that colony is particularly fortunate in having Sir Hugh Clifford as governor, and the work done during his long career in colonial service, and more particularly known to you in recent years when he was Governor of the Gold Coast, assures us that an energetic and progressive programme will be undertaken in the extension of transport facilities throughout Southern and Northern Nigeria. Among other things the Government have under consideration comprehensive harbour schemes at Lagos and Port Harcourt, which will involve a large expenditure and take a considerable number of years to complete. There is no doubt that as the British Government are alive to the potential value and resources of our British overseas possession, we can confidently look forward to a steady increase in the volume of trade year by year, and the outlook is in every way encouraging. Unfortunately at the moment, owing to the delay in the delivery of railway material and rolling stock, the trade has gone ahead of the transport facilities. However, this is only a temporary set-back, and we may with confidence look to see the position right itself gradually. Already there is some improvement.

THE ACCOUNTS.

Turning to the accounts, it will be seen that the total issue of shares to date is 300,000 "A" 6 per cent. cumulative preference shares, 1,748,850 "B" 6 per cent. cumulative preference shares, and 2,455,366 ordinary shares. During the year two issues of shares for cash were made: in January, 1919, of 100,000 preference shares at par, and 150,000 ordinary shares at 45s, and in December, 1919, of 714,494 preference shares at par and 357,247 ordinary shares at 50s. The premiums received on these two issues, amounting to £723,371, have been added to the general reserve fund. A further issue of 820,000 preference and 820,000 ordinary shares is now under offer to the existing shareholders in the proportion of one ordinary and one preference share for every three ordinary shares at present held. It is calculated that this issue will give the company about £2,645,000 additional capital, which is required to meet the present commitments, further developments, to allow the company to pay considerably over £1,000,000 due for income-tax and excess profits duty, and to provide additional capital rendered necessary owing to the increased value of goods to meet the trade requirements.

On the debit side of the balance-sheet the liabiliites include sundry creditors, £2,109,045. Of this amount £1,066,000 represents income-tax and excess profits duty, payable on the profits of the years 1918 and 1919, the balance consisting of amounts due to employees of the company, amounts due on deposit accounts, and debts contracted in the ordinary course of the business. The advance by bankers of £311,463 is more than covered by the cash on hand, amounting to £395,982.

The reserves, including insurance fund, depreciation fund, premium on shares, and general reserve, amount to £5,276,714, and to this figure there should be added the sum of £350,000, which it is proposed to transfer from the profits to reserve, and also the carry forward of £203,512, making a grand total of £5,830,226, or over two and one-third times the ordinary share capital.

On the credit side of the balance-sheet the value of buildings, steamers, &c., £509,951 have been taken at pre-war values, and could not to-day be replaced at anywhere near the values shown in the accounts. The stocks of produce, amounting to £909,451, have since been realised and sold.

Sundry debtors, £2,538,125, includes a sum of more than £1,500,000 due in respect of shares allotted in 1919 and included in the balance-sheet. The instalments due on all calls on these shares have been received in 1920. The balance of this item represents advances to subsidiary companies and credit given in the ordinary course of business, all of which has subsequently been collected.

The investment in shares and the allied subsidiary companies are valued at £6,759,635. If we deduct the total reserves of £5,830,226 from this amount, the whole of the amalgamated businesses, including their stock-in-trade and all investments, stand in the books at less than £1,000,000 sterling. We venture to suggest that there can be no greater proof than this to satisfy you that the businesses acquired have been purchased at very reasonable prices, and the company have secured exceptional businesses at very much under their market value. The position of the company is unique, not only in its resources, but in the sound position just explained.

PROFITS AND DIVIDENDS.

The profit for the year is £1,721,618, and after allowing for excess profit duty and income-tax, say, £720,000, and the interim dividend on preference shares, £6,037, we have available for distribution, including £36,225 brought forward from the previous year, £1,031,806. After deducting the interim dividend and the final now recommended of 18 per cent., making 30 per cent. for the year, and placing £350,000 to general reserve fund, there is a balance of £203,512 to carry forward. It may be considered that the directors have adopted a very cautious policy in placing such a large sum to reserve and in carrying forward over £200,000, and it can be argued that these two amounts, equal to £560,000, represent a dividend on the ordinary shares equal to 32 per cent., less income-tax. Your directors decided on taking extra precautions in fortifying the position of the company, and to assure its future strength. It is probable that as they see more clearly into the future they will favourably consider capitalising the reserves. Meantime, I am able to assure you that the prospects of the company this year are already assured, and I do not think I am too optimistic in saying that the present dividend can be maintained for the present year not only on the present issue of capital, but including the bonus shares and the new issue. Every precaution has been taken to preserve and maintain the company's success in spite of the considerable fluctuation in the prices of West African produce during the past two months. In making this statement I have based my calculations on the whole of the company's West African produce unsold to-day being disposed of at to-day's market prices.

In addition to the cash distribution of 18 per cent., it is recommended to give a bonus of one share in every 20 ordinary shares, and for this purpose an extraordinary general meeting will be held to pass the necessary resolution at the termination of this meeting, and will require confirmation at a further meeting to be held on July 29th.

NATIONAL EXPENDITURE AND TAXATION.

The confidence of the country has been greatly shaken by the continued increase in national expenditure. It was quoted in the *Times* a few days ago that the taxation per head in the United Kingdom is £22 os 6d, as compared with the United States £10 1s 3d, France £17 16s 10d, Italy £5 6s 6d, and Germany £21 15s 8d. This country is spending per annum on the present Budget estimates six times pre-war expenditure. Nothing has occurred since the War to injure the trade of the country so much as the present Budget, and unless drastic measures are taken to bring home to the Government the injury they are doing to British industries, I greatly fear that before this year is out we shall have great distress and a very large increase in unemployment.

I am entirely against the continuation of the excess profit duty. It bears unfairly on all new enterprise, and from all points of view is vicious in its influence on all new commercial undertakings. The nation as a whole is becoming alive to the fact that industry will succumb unless drastic measures are taken to stop the resources of the country being drained by increasing Government expenditure.

PRICES OF WEST AFRICAN PRODUCTS.

At the commencement of 1919 our chief articles of West African produce, namely, palm oil, palm kernels, groundnuts and cocoa, were all under Government control. The fixed controlled prices at that time were: Palm oil, £48 per ton; palm kernels, £26 per ton; groundnuts, £32 per ton; cocoa, £65 per ton. These prices were considerably below the intrinsic value of the commodities, and when the control was removed the prices of all immediately advanced so that palm oil reached £95 per ton, palm kernels,

£46 per ton, groundnuts, £50 per ton, and cocoa, £108 per ton. Since the closing of our accounts on December 31st there has been a fall in prices of West African produce, and to-day's prices are palm oil £56 per ton, palm kernels £32 per ton, groundnuts £32 per ton, and cocoa £72 per ton. To a very great extent the directors anticipated this fall in prices, and although it cannot be denied that it will have its effect on the trade in West Africa, I am, however, in a position to assure you that we have very largely discounted this break in prices, and, therefore, with confidence feel that the company will be able to maintain its present rate of dividend, as previously stated. Your directors consider that the present basis of prices is a much safer one for our trade than the high level which has existed up to recently.

STAFF AT HOME AND ABROAD.

I am glad to report that during the past year the health of the staff in West Africa has been satisfactory. There was only one casualty, caused by drowning whilst bathing. Out of a number exceeding 500 there were only 15 invalided. With the improved hygienic arrangements, including good water supply, housing accommodation, and hospital facilities, the percentage of sickness is decreasing steadily year by year. My colleagues and myself wish to express to the staff, both here and abroad, our warm appreciation of their loyalty and support throughout the past year. Your directors have given due consideration to the increase in the cost of living, both here and abroad, by suitable increases in pay. In connection with the employees abroad, special insurance policies have been issued, which have been much appreciated by all. In conclusion, the Chairman moved (a) "That the statement of accounts and balance-sheet and the report of the directors now submitted are hereby approved." (b) "That the sum of £350,000 be transferred to general reserve." (c) "That a final dividend of 18 per cent., less income-tax, be and the same is hereby declared on the ordinary shares of the company (except shares Nos. 428,777 to 578,776 and 1,814,018 to 1,829,017, which are only entitled to three-fourths of such dividend), making, with the interim dividend already paid, a total dividend of 30 per cent., less income-tax, for the year on the ordinary shares of the company (other than the shares above mentioned) entitled to participate in both of such dividends."

Mr Robert B. Miller (vice-chairman) seconded, and the resolution was unimously adopted.

The retiring directors, Messrs G. Munro Miller and J. Pickering Jones, were re-elected, and the auditors, Messrs Harmood Banner and Son, were re-appointed.

Resolutions were unanimously adopted approving of the payment of £10,000 to Mr H. Cotterell in recognition for his past services to the company as director from the year 1889, and as chairman of the board of directors from the year 1900, and that the thanks of the meeting be accorded to Mr Cotterell for such services. It was also decided that £2,500 be granted to the Liverpool University in response to their special appeal for funds.

An extraordinary general meeting was held immediately following the general meeting, when a resolution was unanimously adopted altering the articles of association of the company to permit of the capitalisation of reserves.

THE DISTILLERS COMPANY, LIMITED.

STRONG POSITION OF COMPANY.

INCREASE OF CAPITAL SANCTIONED.

The forty-fourth annual general meeting of the Distillers Company, Limited, was held at their registered office, 12 Torphichen street, Edinburgh, on the 16th instant, when Mr W. D. Graham Menzies, chairman of the company, presided.

In moving the adoption of the report, the Chairman said:—"Once more I am pleased to come before you with what is on the whole a very satisfactory report. There are disquieting features in connection with same, which will be referred to later, but for the moment you will no doubt agree with me that the profits disclosed are eminently satisfactory.

BALANCE-SHEET FIGURES.

"I would like to run over the various items in the balance-sheet in which there appears considerable alterations on the previous year's figures. Starting with the assets, the capital accounts represented by land and buildings and plant and utensils show an increase of £120,000 over the previous year. This is largely due to an increase in our bonded warehouse accommodation brought about by the operation of the Immature Spirits Act, 1915, which is only now beginning to have its effect on the bonding capacity at our various distilleries. As an instance of the higher costs now ruling, I might mention that one of our warehouses in Glasgow which was burned down in the early years of the war, costing originally £18,000, has only now been replaced on exactly the same dimensions at a figure of about £60,000. In addition to the increases in our bonding accommodation, we have also carried out alterations at several of our distilleries with the view of making them more efficient and of reducing hand labour.

INVESTMENTS.

"Investments, which show an increased amount of £233,000 over the previous year, embrace the businesses of Preston's Liverpool Distillery Company, Limited, and of John Haig and Co., Limited, Markinch, which I referred to as having been purchased in my last annual review, and also one or two other smaller investments which have been acquired since. Sundry debtors are down by £162,000, while stocks of spirits, grain, &c., are up by no less than £847,000. The latter is due to more of our distilleries being now at work entailing the carrying of augmented stocks of raw materials at considerably enhanced costs. There has also been the need for replenishing our depleted stocks of old whiskies used in our export business with new whiskies at over three times the original values. This fully explains the drop in the amounts represented by cash in bank and in the form of bills. 'Loans to subsidiary companies' appear in the accounts for the first time, and arise through the system of financing several of these subsidiary companies during the year—in particular, the old-established and well-known business of Andrew Usher and Co., which was taken over last November.

LIABILITIES.

"Coming now to the liabilities side of the balance-sheet, the share capital has been increased by the issue of new shares to the shareholders of Preston's Company and John Haig and Co. The reserve, fire insurance, and superannuation and provident funds have all been increased by the sums given in the report. In regard to the latter fund, it is the desire of your directors to make this fund self-supporting, and, according to actuarial advice, which they have taken, they believe that the fund should now meet that condition until heavier drains are made upon it. The fund is invested in the company's business, who allow 5 per cent. interest thereon. Loans from subsidiary companies have increased by over £320,000, sundry creditors by £94,000, and the rather unusual item of £170,000 appears as a sum due to the bank. The provision for carriage on customers' spirits lying in bond has had to be increased by £39,000, due in large measure to the higher railway rates.

PROFIT AND LOSS ACCOUNT.

"Turning to the profit and loss account for a minute, you will see that these larger commitments have synchronised with an increased profit for the year of over £166,000, so it cannot be said that our recent investments have turned out badly. All the same, the state of the balance-sheet indicates very clearly the need for fresh capital. The report draws attention to this fact, and also gives the reason for retaining such a large proportion of the profits in the business in place of paying a higher dividend. This will be referred to in greater detail at the subsequent meeting.

THE FUTURE.

"As regards the prospects of the future, it is difficult for me to prophesy. With the exception of Caledonian Distillery, which should be ready to resume work in about a month's time, all our distilleries are now in operation, and the demand for the company's products keeps fairly steady. Your directors, however, do not disguise from themselves the fact that the present demand is largely due to the need for replenishing customers' stocks, which have been depleted during the war, and that as soon as these stocks again reach their normal level there will be need for the greatest caution on the part of distillers in order to prevent a serious over-production. The closing down of certain markets, such as America, the competition from American, Canadian, and other spirits in this country and in other parts of the world, as well as sundry other causes, render the outlook for our trade rather obscure. One of the most anxious features of the situation, however, is the enormous rate of duty which the Chancellor of the Exchequer has seen fit to impose upon a home industry.

APPRECIATION OF THE STAFF'S SERVICES.

"I have only further to express on behalf of myself and my colleagues on the board our appreciation of the services rendered by the whole staff, and which have done so much to bring about such a successful result of the year's working.

"I now have pleasure in moving the adoption of the report, which recommends a dividend of 5 per cent. per annum, less tax, on the preference shares, and a dividend of 10 per cent. per annum, free of tax, on the ordinary shares, the final dividends in each case being payable on August 2nd next, while there is carried into the current year a balance of £100,526 7s 2d."

THE MANAGING DIRECTOR'S STATEMENT.

Mr W. H. Ross, the managing director, seconded. After referring to the excessive taxation of spirits, and to the efforts

of prohibition advocates to harass the liquor industry, he said, in conclusion :—

This company individually is in a particularly strong position to withstand any attacks made upon it. Your directors have been careful in the past to spread their risks, so that if one branch of the business failed us, we would have another to fall back upon. That policy has been particularly successful in the case of our yeast business. A year ago I explained what we had done in this direction during the war, and without the distillers' help in these dark days it might have gone hard for our country.

POSSIBILITIES OF INDUSTRIAL ALCOHOL.

But yeast is only one of the many side lines of our business The trade in industrial spirits is a growing and important one. Of recent growth is the demand for a new motor fuel to replace or rather to supplement the diminishing supplies of petrol, which authorities tell us are at present giving considerable concern to that vast and comparatively new industry—the motor industry. It is many years since your directors first directed their attention to producing a cheap form of alcohol suitable for use in internal combustion engines, but up till recently the low price and apparently inexhaustible supplies of petrol rendered our chance of success out of the question. Lately, however, the oil groups themselves admit the possibility of a shortage in petrol at no distant period, and the ruling price for that product gives support to their admission. Most authorities agree that although there are several substitutes which may be utilised either separately or mixed with petrol—such as benzole—these by themselves would mitigate but would not satisfy the shortage which is likely to arise. The only known product which could be produced in almost illimitable quantity is alcohol. A report was published last year by a committee appointed to consider the possible alternative fuels. The Patent Still Distillers thereafter approached the Chancellor of the Exchequer with the view of getting some relief from the onerous restrictions by which the trade in methylated spirits has hitherto been conducted. It is gratifying to be able to state that our request was favourably and sympathetically considered, and in the present Finance Bill, as also in the Revenue Bill which will follow, we have the promise of substantial concessions which will go a long way to assist us in the development of this new trade. Just as I warned you not to be too pessimistic in regard to the trade in potable whisky, I also warned you not to be too optimistic in regard to this new trade in power methylated spirits. There is still a great deal of spade work to be done. I think you may take it that the problem as to whether alcohol—either pure or mixed with other substances—can be used as a motor fuel has been satisfactorily solved, and that the main difficulty now remaining—which, however, is an important one—is the selecting of a raw material cheap enough, and yet which will be available in sufficient quantity to meet the requirements of an industry which may grow to colossal proportions. One of our colleagues is now abroad in connection with this question, and we are also in constant touch with all the interests which are affected—our strong view being that only by the co-operation of every interest concerned can we hope to bring matters to a successful issue.

INCREASE OF CAPITAL.

An extraordinary general meeting was held immediately after the annual general meeting, when Mr W. D. Graham Menzies, chairman of the company, presided.

In proposing the resolutions increasing the capital of the company from £2,500,000 to £4,000,000 the managing director, Mr W. H. Ross, said :—From the statements which have been made at the earlier meeting, I don't think I need waste many words in explaining why these resolutions are necessary, and why we ask your permission to increase the capital of the company. In spite of the conservative manner in which the finances of the company have at all times been handled, we find our ready cash requires replenishing. Not only have values of raw materials and stocks of all kinds increased enormously, but it must be borne in mind that the directors have acquired during the past few years several valuable businesses, the prices of which were paid for in cash. This has caused a drain on our finances in two directions. Not only had the original price to be found, but extra capital is now required to carry on these businesses, all of which falls upon the parent company. It is satisfactory to know that these recent purchases have all shown, and I hope will continue to show, an excellent return upon the investment.

CONDITIONS OF THE NEW ISSUE.

You will now want to know on what lines the directors propose to make the first issue of shares, assuming that the resolutions now submitted are approved of and confirmed by you. Your directors very carefully considered whether these shares should be offered to the present shareholders at par or at a premium, and failing acceptance by them, that they might then be offered to the public. We also considered whether the issue should be in the form of preference shares, or in the form of ordinary shares. The objection to an issue of preference shares is that it would be necessary to pay a much higher rate of interest than 5 per cent. for any new issue, and we could hardly do this and leave the present issue of preference shares at the old rate of 5 per cent. We are very averse to raising the present rate of preference interest, as it might involve an undue burden on the profits of the company in years to come, when these might be less able to bear it. On the whole, therefore, I think you will agree that your directors have come to a wise conclusion to make the present issue wholly in ordinary shares, and to offer these to the present shareholders at par. It is proposed to offer two new ordinary shares at par to the holders of every five ordinary shares on the register at September 30th next. Also to offer one new ordinary share at par to the holders of every five preference shares on the register at same date. These rights will be transferable, and it is not proposed to recognise fractions of shares; but doubtless if any shareholder feels that he will be making a sacrifice by dropping a fraction, he will have ample time to even up his holding either by buying or selling before the register is closed. I hope the concession made to the preference shareholder will be approved by his brother shareholder who is more fortunate at present in holding ordinary shares. The concession is perhaps not so much as we would have liked to make, but it is all that we felt justified in asking the ordinary shareholders to forego, and is a much wiser arrangement, in our opinion, than to increase permanently the rate of interest on the preference shares. The proposed first issue should bring in over £880,000, which ought to be sufficient for our immediate needs. This will leave a balance of capital unissued which we propose should be left in the directors' hands to issue as and when required, either for the extension or development of the business.

If you approve of the present resolutions they will be submitted for confirmation at another extraordinary meeting, to be called for Friday, August 6th, at the conclusion of which meeting the special resolution for the issue of these shares will be submitted. In order that shareholders may have ample notice of what they may require to provide in the way of cash, I might here mention that the first call of £5 per share will probably be due on November 15th, and a final call of £5 per share on December 15th. Thus it is hoped that the new shares will all be registered and fully paid before the registers require to be closed for making up the usual interim dividend payable on February 1st, in which it is proposed that the new shares shall participate.

The motion, having been duly seconded, was carried unanimously.

SIALANG RUBBER ESTATES, LIMITED.

SUCCESSFUL RESULTS OF THE YEAR.

CAPITALISATION OF RESERVES.

The eleventh annual ordinary general meeting of the Sialang Rubber Estates, Limited, was held, on the 15th instant, in the Council Room of the Rubber Growers' Association (Incorporated), 38 Eastcheap, London, E.C., Mr Charles Heath Clark, J.P., presiding.

Mr James M. Kemp, representing the secretaries (Messrs. Harrisons and Crosfield, Limited), having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and gentlemen,—Owing to the absence of our chairman, Mr Croll, who has been forced to take a short rest and holiday, I have been asked to preside over the meeting to-day. I presume it will be your pleasure, as usual, to take the report and accounts as read. The issued and paid-up capital of the company at the date of the balance-sheet was £200,000, which is the same as at the end of the previous year. The amount at the credit of premiums on shares account remains at £62,633 11s 6d, and if you agree to our recommendations to transfer £2,366 8s 6d out of last year's profits to development reserve account, the total sum at the credit of the two accounts will amount to £100,000, which is equal to £14 11s 2d per planted acre. The net capital expenditure for the year amounted to £14,385 6s 2d, or £8 16s 5d per acre on the 1,294 acres which was the average immature area during the year. After deducting the amount at the credit of premiums and reserve accounts, the net book cost of the 6,869 acres planted at the end of January last was £28 13s per acre.

At the end of the financial year we had a surplus on capital account of £3,212, to which will be added the £2,366 proposed to be transferred from last year's profits. There is also a net carry-forward of undistributed profits of £17,016; that is after deducting £22,000, the estimated liability for excess profits duty. These sums together total £22,594. Against this we have to

meet capital expenditure during the current year, estimated at £12,072, and if this estimate is adhered to we should finish the current financial year with a surplus on capital account of £10,522. During the year an area of 265 acres was opened and planted with rubber, bringing the total planted area at the date of the balance-sheet up to 6,869 acres. This work has been carefully done, and shows every prospect of proving a valuable addition to the company's properties. A detailed acreage statement, as usual, is set out in the directors' report.

CROP ESTIMATE EXCEEDED.

The crop of rubber harvested during the financial year amounted to 1,795,737 lbs, against the managers' estimates of 1,540,000 lbs, and a previous year's total of 1,095,166 lbs.

The crop was harvested from an average bearing area of 5,575 acres, or about 81 per cent. of the total planted area, and the average yield per tree was 4.55 lbs, as against 3.89 lbs the previous year. The cost of the crop f.o.b. at port of shipment, including depreciation and commission to staff, but excluding loss on exchange, was 11.38d per pound. All the estates were maintained in a first-class weeded condition throughout the year at an average cost, including the upkeep of terraces, of 1s 0½d per acre per month.

The labour force numbered at the end of January last 2,670, against 2,506 at the same date the previous year. No extensive thinning-out work was necessary during the period. The work of keeping the estates in good condition is reported to be well up to date, and was satisfactory throughout the year. As regards draining and terracing, all available labour was used during the year, and good progress was made with this work, which will be proceeded with as and when labour is available. No serious cases of disease were observed during the year, and the usual regular inspection and prompt measures of treatment were successfully carried out. In his latest report the visiting agent states that the estates remain in first-class condition throughout. For the current financial year our managers have estimated for a crop of 2,045,000 lbs, and up to the end of June last we had harvested 844,068 lbs, so that, given normal conditions, the estimate ought to be fully secured. Out of the current year's crop we have sold to date, including forward sales, 665,151 lbs, at an estimated average net price of 1s 10.97d per pound.

PROFIT AND DIVIDEND.

The net profit for the year's working amounted to £79,296 12s 3d, to which falls to be added £9,545 1s 1d, being the amount of the carry forward from 1918-19, plus a refund of excess profits duty, less a small amount paid in respect of Netherlands Indies war profits tax. From the resulting total of £91,382 1s 4d we have to deduct an interim dividend of 10 per cent. paid in December, 1919, leaving a balance of £71,382 1s 4d to be dealt with to-day. Our proposal is that a final dividend of 15 per cent., less income-tax, be paid, making 25 per cent. for the year, that the sum of £2,366 8s 6d be placed to reserve account, and that the balance of £39,015 12s 10d be carried forward. This carry forward is subject to Netherlands Indies war profits tax, if any, and to excess profits duty for last year, estimated at £22,000.

Our thanks are due to our staff for the very good work carried out by them during the year, and I shall be glad if some shareholder will show your appreciation of their services by moving a vote of thanks to them before the meeting closes. I have pleasure in moving the adoption of the report and accounts as presented to the meeting, and I will ask Mr Tate if he will be good enough to second that. After he has done so, if there are any questions I shall be pleased to answer them.

Mr J. C. Tate seconded the resolution, and, no questions being asked, it was carried unanimously.

The Chairman: I now beg to move: "That a final dividend of 15 per cent., less income-tax, be paid on the shares of the company in respect of the financial year ended January 31, 1920."

The resolution was seconded by Mr C. E. Morrison, and unanimously approved.

The Chairman: It now falls to my lot to move: "That our chairman, Mr George Croll, be and he is hereby re-elected a director of the company." I am sure that all of you appreciate the value of our chairman's services to the company, and it is not necessary for me to say anything further about that.

Dr Maw seconded the motion, and it was carried unanimously.

On the motion of Mr Gordon Brown, seconded by Mr J. Woodword, the auditors, Messrs Ford, Rhodes, and Ford, were re-appointed.

VOTE OF THANKS.

Colonel M. Hunt: I beg to move that a vote of thanks be passed to the directors and also to the agents and staff in the East for their services during the past year. I am sure the statement that the chairman has made is eminently satisfactory, and we are indebted to them for their good work.

The vote was seconded by Mr Strettel, and unanimously accorded.

The Chairman: I shall have very great pleasure in seeing that the vote of thanks is conveyed to the staff in the East. We, who follow the business of the company from week to week, know that it is thoroughly well deserved. I do not think any company has a more efficient staff, or one that takes such an interest in the business of the company.

EXTRAORDINARY GENERAL MEETING.

An extraordinary general meeting of the company was then held for the purpose of considering and, if thought fit, passing as extraordinary resolutions the following resolutions:—

1. That the articles of association be altered in manner following, namely:—

That the following article, to be numbered 123A, be inserted after Article 123, namely:—

"123a. (1) The company in general meeting may, from time to time, and at any time, pass a resolution to the effect that it is desirable to capitalise any part of the undivided profits of the company standing to the credit of any of the company's reserve accounts, or to the credit of the profit and loss account, or of any sums received by way of premiums on the issue of shares, debentures, or debenture stock, and standing to the credit of the premium on issue of shares and like accounts, and that accordingly such sum be set free for distribution among the members in accordance with their rights and interests in the profits, free of income-tax, and that the same be not paid in cash, but be applied in payment in full of shares of the company, and that such shares be distributed among the members in accordance with their rights and interests in the profits."

"(2) When such resolution has been passed on any occasion the board may allot and issue the shares therein referred to credited as fully paid up, to the members according to their rights and interest in the profits, with full power to make such provision by the issue of fractional certificates, or by sale and distribution of the proceeds of such sale or otherwise as they think expedient for the case of fractions. Prior to such allotment, the board may authorise any person, on behalf of the members, to receive such allotment, to enter into any agreement with the company providing for the allotment to them of such shares credited as fully paid up, and any agreement made under any such authority shall be effective."

"(3) It shall be no objection to resolutions passed under paragraph 1 of this article that they are passed at the meeting at which the resolution introducing this article was confirmed as a special resolution, provided that due notice of the intention to propose such first-mentioned resolutions shall have been given prior to the confirmatory meeting aforesaid."

2. That the articles of association be further altered in manner following, namely:—

That article 90 be deleted, and the following substituted therefor:—

"90. The directors shall be paid out of the funds of the company by way of remuneration for their services at the rate of £250 per annum for each director (other than the chairman) and at the rate of £350 per annum for the chairman, and the directors shall also be entitled by way of further remuneration to a sum equal to 5 per cent. on the amount by which the dividend distributed in respect of any financial year of the company, on the ordinary shares in the capital of the company, shall exceed 10 per cent., but such further remuneration shall not exceed in the aggregate the sum of £1,000 in any one year. The said further remuneration shall be deemed to accrue *de die in diem*, and shall be divided by the directors in such proportions and manner as the directors may determine, and in default of such determination equally. The directors shall also be entitled to such further remuneration which shall accrue from day to day as the company in general meeting may determine, and shall also be repaid all travelling and hotel expenses properly incurred by them in or with a view to the performance of their duties."

Mr C. Heath Clark, J.P., again presided.

ISSUE OF BONUS SHARES.

The representative of the secretaries having read the notice convening the meeting,

The Chairman said: Ladies and gentlemen, the first extraordinary resolution which you have in print before you provides for alterations in the company's articles of association to permit of the issue of bonus shares. The board are of opinion that the time has come when it will be advantageous to have the issued capital of the company more nearly representative of the amount of the fixed assets, as shown by the balance-sheet. On January 31st last these fixed assets stood in the company's books at £296,788 4s 6d, whereas the issued and paid-up capital of the

company is only £200,000. This difference will be met by the capitalisation of £100,000, which is the amount standing at the credit of premiums on issue of shares and reserve accounts, and by the subsequent distribution to the shareholders of 100,000 shares of £1 credited as fully paid. That distribution will mean that the holder of every two shares will receive one additional bonus share. If this extraordinary resolution is approved to-day, it will be submitted for confirmation as a special resolution at a further extraordinary general meeting to be held on the 30th of this month, after which there will be submitted as ordinary resolutions one to increase the capital of the company, and one to give effect to the distribution of bonus shares among the members of the company whose names appear on the register on July 30th.

DIRECTORS' REMUNERATION.

The second extraordinary resolution which you have before you proposes to alter the company's articles with a view to increasing the remuneration of the directors. I might mention that, since the inception of the company in 1909, the directors' fees have been at the rate of £100 per annum, with an additional £50 per annum for the chairman. The total cultivated acreage has meantime been doubled, and the net earnings of the company for the past year are ten times the amount they were in 1911. We feel, and I think shareholders will agree, that these fees are totally inadequate remuneration for the work and responsibility which now devolves on the directors of this company.

We propose that the fees be increased to £250 per annum, with an additional £100 per annum for the chairman, and, further, that the directors shall be entitled to a sum equal to 5 per cent. on the amount by which the dividend distributed in respect of any financial year of the company on the ordinary shares in the capital of the company shall exceed 10 per cent., but that such remuneration shall not exceed in the aggregate £1,000 to be divided between the directors in any one year. I feel that you will consider the terms of this resolution fair and equitable, and that it will receive your approval. I now beg to move the first resolution as set out in the notice convening the meeting.

Mr C. E. Morrison seconded the resolution, and it was carried unanimously.

The Chairman: I now have pleasure in moving the second resolution, and I will ask Mr Tate if he will second it.

Mr J. C. Tate seconded the motion, and it was unanimously approved.

The proceedings then terminated.

THE GENERAL ELECTRIC COMPANY, LIMITED.

DEVELOPMENT OF THE COMPANY'S GLASS AND TELEPHONE INTERESTS.

The annual general meeting of the General Electric Company, Limited, was held, on the 13th instant, at Winchester House, Old Broad street, London, Mr Hugo Hirst, chairman and managing director, presiding.

The Chairman, in moving the adoption of the report and accounts, said: At the outbreak of the war it was realised how backward was the state of the electrical industry in this country; whilst aiming at covering in due course the whole field of the electrical industry, we have up to the present concentrated our efforts mainly on strengthening the existing sections which are already represented.

We acquired some years ago the firm of Frazer and Chalmers, and their turbine department was one of their principal assets, their reputation for turbines and turbo blowers second to none. We have made provision for doubling the output, and the work is nearly completed. We are about to extend considerably the mining machinery department, for which this firm has a great reputation. This policy brought along the necessity for increasing the output on the electrical side at Witton. For large generators a big bay has been erected: a new building for switchgear is in course of construction. New shops for fans and small industrial motors have been laid down, and, although the programme will double our electric plant output, considerable additions will have to be made if, in due course, we are asked to take a share in the electrification of railways, in the development of the hydro-electric plant, the laying down of big power stations, and a more generally extended application of electricity in the industrial field. Before long we hope to double our output of electric lamps, one of the staple productions of the company. The new buildings at Hammersmith for this purpose are approaching completion; new patents, methods, and processes that have developed during the war have been studied by our experts in the States and on the Continent. Machinery has been ordered, and some has already been delivered. The services which our lamp works have rendered during the war in other directions have hampered our progress in the natural development of this important department, and it is high time that we should bring ourselves again up to date.

The glass works at Lemington have been largely extended in order to feed the increased lamp works. Automatic glass-blowing machines under the Westlake patents have been installed, and although these machines, each costing from £8,000 to £10,000, are not yet working efficiently, they will before long overcome all difficulties and ensure to us the much-needed increase in our output.

Our fixtures, accessories, heating, and cooking apparatus works have all suffered through conditions of war, but new buildings and equipments have been provided, and these departments, the original business of the company, are again showing a pleasant upward curve.

The carbon works, partly through importation and partly through the arrival of the half-watt lamp, have drifted back into the pre-war impotence, and will be a difficult problem in the future. On the other hand, the lamp black works, which were originally started as an accessory to the carbon works, have shown great vitality and adaptability. Great use has been found for that commodity in the rubber industry. We have studied its utility for the printing, painting, and other trades, and considerable developments are in course of progress. A similar progress can be recorded in our endeavours to produce our own moulding and insulating materials.

Considerable capital has been required for the enlargement of our various successful enterprises which figure in our balance-sheet as trade investments. The Pirelli-General cable works have been extended, and considerable additions are again in progress. The Express Lift Company promises to become a very important and successful asset. Some 100 acres of land and some factories have been acquired at Wembley for the greater development of our general engineering works, our lamp and glass industries, and our research laboratories, buildings for which are in process of erection. Finally, very big extensions are contemplated with the Peel Conner Works, which are practically owned by this company. The whole of the telephone industry has been at a standstill throughout the war. We have provided for the Peel Conner works the necessary capital for erecting entirely new works at Coventry, alongside the magneto works, which are also controlled by us, and form part of our investments. Although these works could easily be filled for some years to come with contracts for central batteries, exchange equipments, and telephone apparatus for domestic use, we mean to start immediately on the construction of automatic exchanges as well, with the assistance of some of the most prominent telephone experts. We have decided to acquire all the shares of the Peel Conner Telephone Company which are not yet ours, and negotiations towards this end are in progress. We have also acquired considerable interest in a French telephone company, who will use our patterns and patents for the purpose of building up a telephone business in France.

The report and accounts were unanimously adopted

PERNAMBUCO TRAMWAYS AND POWER COMPANY, LIMITED.

COMPANY'S APPLICATION FOR POWER TO RAISE FARES.

The eighth ordinary general meeting of the Pernambuco Tramways and Power Company, Limited, was held, on the 15th instant, at the offices, River Plate House, Finsbury circus, London, Mr William Higgins, O.B.E., presiding in the absence of Mr Follett Holt, chairman of the company, who is at present in South America.

The secretary (Mr H. Tattam) read the notice and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said that a perceptible increase was shown in the receipts, although, of course, this increase owed something to the higher rate of exchange ruling during the period under review. The working expenses had also risen, but the outcome of the year's working was an increase in the net revenue of approximately £21,500. The final result enabled the directors to place £23,000 to renewal and general reserve account, and, after providing for amortisation, the board recommended the payment of a dividend of 3½ per cent., free of tax, on the preference shares, leaving £16,909 to be carried forward. In all the circumstances, he considered this position must be regarded by the shareholders as satisfactory.

They were applying to the Government of the State of Pernambuco for power to raise their rates, those fixed when the concession was obtained, in 1912, being to-day, owing to circumstances quite beyond the company's control, totally inadequate. In 1914 their coal delivered in Pernambuco cost £1 13s per ton, as compared with at least £8 per ton at the present time. He thought he would be quite correct in stating that there was nothing they used that had not gone up at least 100 per cent., and many things as much as 300 per cent. Then, again, Pernambuco, like every other part of the world, had felt the pinch with regard to the increased cost of living, and this had resulted in the company

having to give the employees an appreciable increase in wages. The directors believed in the justice of their appeal.

With regard to their business generally, he stated that the tramway section continued to show development. The directors still believed in the great possibility of the electric lighting and power branch, and were doing all they could to meet the demand that undoubtedly existed in Pernambuco. The work of their gas undertaking had resulted in a loss for the year, but this was due solely to their having had to pay extraordinarily high rates for coal, often of a very inferior quality. The Telephone Company of Pernambuco—of which this company held the bulk of the shares—continued to show an increased number of subscribers, and the best service was given, commensurate with the possibilites of the existing installation.

Mr H. K. Heyland seconded the motion, which, after a few remarks from Colonel William Parker and Colonel Westrop, was unanimously carried.

NECHI MINES (COLOMBIA), LIMITED.

The fifth ordinary general meeting of Nechi Mines (Colombia), Limited, was held, on the 14th instant, at Winchester House, London, Mr Frederick W. Baker, the chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, said that the liquid assets, represented by war bonds, sundry debtors, gold and cash, amounted to £120,247, against outstanding dividends and sundry creditors amounting to £41,319. and a balance of £62,197 shown as undistributed profits. The preference shareholders had had their full distribution of 25 per cent. for the year ended September, 1919, and half of their dividend for the current financial year; and they would be receiving the other half as soon as the accounts for the year were audited, or earlier if the accounts from the mine showed that the preference dividend had been earned, of which there could be no question. The profit and loss account showed net receipts, including gold returns, £91,687, platinum sales £28, profit from working the dredge on the Pato Company's property £3,438, and interest, exchange, &c., £3,516; in all £98,670. Field costs amounted to £27,298, depreciation £6,161, and London administration £3,215, the credit carried to the balance-sheet being £61,995, subject to Colombian income-tax. Adding the amount brought forward, and deducting dividends on preference and ordinary shares to September 30, 1919, £62,197 remained to be carried to next account, subject to excess profits duty.

The general manager (Mr W. A. Prichard), in his annual report, stated that 1,042,464 cubic yards were dredged from Nechi ground during the last nine months of the year, the gross value of the gold recovered being $450,673, averaging 43 cents per cubic yard, with an average depth dredged of 46.3 feet, while the field costs averaged 7.75 cents per cubic yard. With the addition of the £1,000 per month rental to the Pato Company for the use of their plant and the proportion of management expenses charged to the Nechi Company's account in the London books, plus depreciation, the field costs for the last nine months of the financial year to September 30, 1919, was increased to an average of 15.69 cents per cubic yard. During the first three months of the year under review 344,061 cubic yards were excavated by the Nechi Company's dredge from the Pato Company's ground, averaging 24.9 cents per cubic yard. The yardage remaining to be recovered was about four million cubic yards. The shareholders would be glad to observe that the Superior Court of Medellin had given a sweeping decision in the company's favour in the litigation arising from the local authorities placing a heavy import tax on mining machinery contrary to national law. The amount involved was about $70,000 for the Pato and the Nechi, with accumulated interest, costs, &c. Much credit was due to Mr Prichard for the stiff fight he put up against this attempted imposition.

The report was adopted.

OROVILLE DREDGING COMPANY, LIMITED.

THE COMPANY'S INTERESTS IN COLOMBIA.

The ninth ordinary general meeting of Oroville Dredging Company, Limited, was held, on the 14th inst., at Winchester House, Old Broad Street, London, Mr Frederick W. Baker, the chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, intimated that the general manager and consulting engineer (Mr Prichard) was present, and would furnish any information the shareholders might desire. The balance to credit of profit and loss account for the year, carried to the balance-sheet, was £69,653, from which four dividends of 6d per share had been paid, leaving a balance at credit of profit and loss account, subject to excess profits tax, if any, of £25,367, which it was proposed to carry forward. They had received practically their share of the assets of the American Oroville Dredging Company now in liquidation. At the Pato Mines (Colombia), according to the annual report of the general manager of that company, 1,379,331 cubic yards were dredged, as compared with 1,345,215 for the previous year, the gross value of the gold recovered being $489,953, averaging 35.5 cents per cubic yard, with an average depth of gravel dredged of 31.4 feet, against

$266,062, averaging 20 cents for the previous year, with an average depth of 33.2 feet. The field cost for the year averaged 8.77 cents per cubic yard, as compared with 11.16 cents for the previous year. It was noteworthy that the yield for the year was 27.3 per cent. greater than the prospecting estimate for the area dredged. The London accounts of the Pato Company showed a profit of £29,724, after providing £26,206 for depreciation. A first dividend of 3s per share was paid in September, 1919. The remaining undredged area was estimated at 17,279,000 cubic yards, having a gross value of just over $5,000,000. With regard to the Nechi mine, the net profit for the year was £61,995. That, together with £75,453 brought forward, less dividends paid during the year 1918-19, left a balance of £62,197, which was carried forward, subject to excess profits duty, if any. The Constancia mine had been taken over by the Colombian Corporation, and was now being worked by them. The development had been quite satisfactory, and a great deal had been done in testing and proving metallurgical questions in order to get the most economical and effective recovery.

Mr W. A. Prichard, in the course of a few remarks, said that the Oroville Dredging and its offspring companies had gained the confidence of the Colombians, and had merited and enjoyed in general the protection of the Colombian Government.

The report was adopted.

HENDERSON'S TRANSVAAL ESTATES, LIMITED.

SUBSIDIARY COMPANIES—COAL INDUSTRY IN SOUTH AFRICA.

The eighth ordinary general meeting of Henderson's Transvaal Estates, Limited, was held, on the 15th instant, at River Plate House, Finsbury circus, London, the Right Hon. Lord Oranmore and Browne, K.P. (the chairman of the company), presiding.

The secretary (Mr F. R. Cunningham) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: On the year's working there is a profit of £45,892, and while this is £3,110 less than last year, I have again the pleasure to point out to you that our revenue from dividends and interest, £37,162, shows an increase of £13,214 on the previous year's figures; on the other hand, the profit on shares sold is £10,642, as against £28,569, or £17,927 less. These figures, to my mind, demonstrate the very healthy state of the company's affairs, and I confidently look forward to that future time when the income received from dividends and interest will furnish us with such a sum as will be more than sufficient to pay our dividends without any realisation of shares, which is, after all, an uncertain quantity and entirely dependent on markets, which in their turn are subject to all sorts of outside disturbing influences. After allowing for the amount required to pay the dividend of 6 per cent. which we recommend and the transfer of £5,000 to reserve, we shall carry forward £42,103, a sum equivalent to a dividend at the same rate as we are now recommending, and only a few hundred pounds less than the sum brought into the year's accounts.

Henderson Consolidated Corporation, Limited, has fulfilled the anticipations which I mentioned to you when last we met. It is true that the profits which have enabled it to make so substantial a distribution have been derived from the sale of part of its land, but it is now in a strong financial position and in possession of such an amount of cash as to place it in quite a different category to that in which it has been in the past. The demand for land in South Africa still continues, but is not so great as in 1919. The properties remaining to the corporation are those let to good tenants, and the rent roll will not be very seriously affected by the realisations which have taken place. The corporation is largely interested in the Tweefontein United Collieries Limited, to which I shall refer later on.

The returns from Tweefontein Colliery, Limited, have not been on so high a scale as for previous years. As you are aware, its profits depend entirely on the results shown by the Tweefontein United Company, and an improvement in the rate of dividend distributed cannot be looked for until the mines themselves recover from the adverse conditions to which reference is made in the report.

I have nothing to add to the paragraph in the report under the heading, Daggafontein Mines, Limited, but we are now anxiously awaiting the assays of the reef when cut in the No. 2 shaft, as this will give some indication as to the value of the gold deposits in the deeper portions of the property. I may add that financial arrangements are now being made for financing the development of the mine from this shaft after the reef is reached.

Delagoa Bay Development Corporation, Limited, for the year ended June 30, 1919, paid a dividend of 4 per cent., but it is much to be regretted that, owing to the circumstances mentioned in our report, the prospects for the current year are less favourable.

Tweefontein United Collieries, Limited, caused us great disappointment, but, in view of what I said at our last meeting, I do not think this will come to you as a great surprise. The adverse factors which I mentioned have had a far more serious and prolonged effect on the mines than we even then thought possible, and it is only now that an improvement in the future is to be looked for. The result of the numerous troubles which have had to be dealt with is that the cost of production has increased by no less than 2s 1d per ton, while it has only been possible to raise the selling price by 8½d.

On one point you can rest assured, and that is as to the eventual future of our coal interests in South Africa. The coal is there in unlimited quantities, and can be mined at a lower price than anywhere else in the world, and the demand for it exists, not only locally in South Africa, but everywhere. The great trouble is to get the coal from the mines to the ports, where ships are waiting week after week.

I do not propose to enlarge upon the prospects of British Asbestos Chrome Company undertaking at this stage, as I consider such a step would be somewhat premature.

We have received several inquiries as to the date upon which the options on shares at par expire. These continue until "twelve calendar months after the formal declaration of peace by Great Britain terminating the present European war." The option period will therefore be determined by the Order in Council determining the termination of the European war.

The report and accounts were unanimously adopted.

LOBITOS OILFIELDS, LIMITED.

SUCCESSFUL RESULTS—FAVOURABLE OUTLOOK.

The twelfth annual ordinary general meeting of the Lobitos Oilfields, Limited, was held, on the 13th instant, at Winchester House, Old Broad street, London, Mr H. W. Sillem (the chairman) presiding.

The Chairman, in the course of his speech, said: In some quarters it seems to have been assumed that the resignation of Sir Archibald Williamson may be a preliminary step towards the ultimate transfer of the control of this company to one or other of the large oil groups. I therefore take this opportunity to say quite clearly and emphatically that this assumption is incorrect. Your board have not now, nor have they at any previous time, entered into negotiations for the sale of the company's undertaking. Moreover, in view of the favourable prospects of the oil industry, they have no intention of recommending shareholders to dispose of the company's very valuable assets.

The development of the company's properties has proceeded smoothly and with satisfactory results during the year. At the beginning of 1919 we had 148 producing wells. Twelve new wells were added during the 12 months, and seven wells were abandoned during the same period. Thus, the number of producing wells at the end of last year was 153. The total depth drilled during 1919 was 32,612 ft., as compared with 33,865 ft. in 1918. In the Restin field deep drilling has been undertaken, some of the wells having

been taken to a depth of 2,000 to 2,500 ft., whereas in 1918 we were obtaining oil from the shallow sand at approximately 500 to 800 ft. This will account for the relatively small number of new wells drilled last year.

Our output for 1919 was 91,468 tons, as compared with 85,213 tons in the previous year, while the net profit for the two years was respectively £107,264 and £74,587. The dividend of 20 per cent. in respect of 1919 is the highest yet paid by the company, and, taken in conjunction with the distribution to our shareholders of 160,000 fully-paid shares of the Anglo-Ecuadorian Oilfields, Limited, the yield will, no doubt, be regarded as eminently satisfactory.

I consider the outlook is distinctly favourable. The world's demand for oil is increasing so rapidly that new sources of supply will need to be opened up on a large scale. We are doing the best we can to supply our proportion of growing requirements, and we have entered into a contract for the sale of our total production for the three years 1921, 1922, and 1923 at prices which represent a substantial advance on similar previous engagements.

The report and accounts were unanimously adopted.

ASSAM OIL COMPANY, LIMITED.

POSITION AND PROSPECTS.

The twenty-second ordinary general meeting of the Assam Oil Company, Limited, was held, on the 14th inst., at Winchester House, London, Lord Ribblesdale presiding.

The Chairman, in moving the adoption of the report, said that the results of the working in the period under review were very much on the same lines as those of the previous year. Mr Garrett, who has been appointed as the company's geologist, came to them with very high recommendations as to his experience and ability. He had surveyed a gerat deal of the property, and had put the board in possession of a great deal of new information. Only last week they had a report from him to which they attached very considerable importance. As he (the chairman) had told them, a well was being drilled at Namchik, a place some distance from Digboi, where the surface shows of oil were very considerable, and to the testing of which they had always attached considerable importance. In their first well they obtained oil, but not in large quantities, and a second well was at present being sunk on what they believed to be an easier and more favourable site.

Turning to the accounts, he said that the working profits, owing to increased expenses in various directions in the way of higher wages, &c., were not quite so good as they were in the previous year. Slightly smaller quantities had been dealt with, and the whole profit was a little down. He thought, taking it at its worst, that it was about £6,000 less, but some of the fall was compensated for by the rise in exchange, with the result that the total profit shown in the revenue account was just about £4,000 behind the profit they made in 1918. In the balance-sheet there was one item which differed sufficiently from the average run of previous years to make it worthy of comment, and that was "Sundry stocks of products in London and in transit." The increase in the value of these stocks to £35,815, as against £17,372 last year, was due to large shipments of wax which they were able to get away at the end of the year, and to the higher value of the wax itself. In a recent note to the board Mr Garrett had been able to give them opinions on portions of the actual Digboi field itself, and if borne out they would add most considerably to the value of that portion of the field. At the refinery it had been a year of great progress. Their property only required energy and development to make it a really fine oil-bearing field.

Mr Hubert S. Ashton seconded the motion, which was unanimously adopted.

Resolutions were also passed confirming the dividends already paid on the preference shares, and approving a dividend of 8 per cent., less tax, on the ordinary shares, and a further dividend of 1 per cent., less tax, on the preference shares.

TRANSFER OF INDIA STOCK BY DEED.

The Bank of England and the Bank of Ireland, with the concurrence of the Secretary of State for India in Council, have made regulations providing for the transfer of India stock by deed. These regulations come into force forthwith, and have been published through His Majesty's Stationery Office as No. 784 of the Statutory Rules and Orders.

BULLION.

The gold movements to or from the Bank of England are no longer announced. For the week ended July 14, 1920, the stock of coin and bullion showed an increase of £2,141,795 compared with the previous return.

R. G. JAQUET, Accountant-General.

India Office, July 12, 1920.

Messrs Samuel Montagu and Co. write on July 15th as follows:—"Gold:—The Bank of England gold reserve against its note issue is £121,469,785, a substantial increase of £1,984,310 as compared with last week's return. The very small supplies of gold in the market this week were taken for India and the trade. It is reported from New York that $3,406,000 in gold has arrived from London during the week. The following were the United Kingdom total gold imports and exports during the month of June, 1920:—Imports, £5,792,512; exports, £6,188,468. Silver:—The market has been devoid of interest most of the week—supplies have been unusually scanty; on the other hand, demand has been far from active, so that had it not been for some falling off in sales from the Continent prices would not have been so good. Most of the buying has been on account of bear covering; some purchases have been made for the Indian bazaars, but as this week's steamer is the latest which can deliver in time for the August settlement in Bombay, it is possible that inquiry for that quarter may be less apparent. Considerable consignments of silver bought two months ago have been shipped to China from the United Kingdom, but no fresh purchases have been made. The fact that Chinese exchange is fairly steady is owing to speculative influences rather than to the condition of the balance of trade between China and the rest of the world. Exports of silver from the United States of America seem at a standstill, a state of affairs which rather suggests that silver imports from Mexico and elsewhere must be accumulating. This consideration is of importance, for the National City Bank of New York states in its last month's circular that the Mexican production has recently averaged $6,000,000 per month. The circular also states that the output of the U.S.A. for last year was 55,285,196 ounces. Hence about four years' domestic production would be required to replace the $271,000,000 melted and sold under the Pittman Act. The circular adds that 4,000,000 ounces are required annually for the new U.S. coinage.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	June 22, 1920.	June 30, 1920.	July 7, 1920.
Notes in circulation	16,655	16,434	16,200
Silver coin and bullion in India	4,329	4,555	4,602

16	106 6	52⅛	51⅜	17, 1919	54⅛

NOTICES.

It is officially announced that, subject to Treasury sanction, it has been arranged for Messrs Richards and Co, bankers, Llangollen, the old established banking business, to be amalgamated with the National Provincial and Union Bank of England, Limited, with whom they have been associated for many years as their London agents. The identity of Messrs Richards and Co. with the business will be preserved by two members of the firm (Messrs S. C. Richards and R. W. Richards) becoming local directors.

The Guaranty Trust Company of New York will shortly open a branch at Constantinople, for which permission from the New York State Banking Department has been obtained. Mr Sigmund Metz, acting joint manager of the London office, has been designated to organise the branch and manage it until it shall have been thoroughly established, and he will proceed to Constantinople this week. Mr Peter Solari has been appointed assistant manager, and Mr Richard Schellons secretary.

In connection with the recent acquisition of a share interest in the Austrian Credit Anstalt by Kuhn, Loeb and Co. of New York and the Guaranty Trust Company of New York, the executive committee of the latter has nominated Mr Sigmund Metz, acting joint manager of the London office of the Guaranty Trust Company, to be a director on the board of the Credit Anstalt. This appointment is made in accordance with the arrangement under which the American interests are each to have a representative on the board.

A branch of the Bank of Australasia has been opened at Glen Innes, New South Wales.

OIL OUTPUTS.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—Total production for June amounted to 105,360 barrels, or approximately 15,052 tons, including 55,411 barrels from the properties of the St. Helens Petroleum Co., Limited.

TRINIDAD LEASEHOLDS, LIMITED.—Oil produced during June, 15,100 tons. Note.—A cable dated July 1st advises that Well No. 4 Forest Reserve has been brought in with an average daily production of 1,000 barrels.

RAILWAY AND TRAMWAY TRAFFIC RETURNS.

No traffic returns of British Railways have been issued since the Government took control of the Railways at the outbreak of the War. The Government took over control of the Irish Railways as from January 1st, 1917.

BROKEN HILL PROPRIETARY.—Report for four weeks ended June 23rd:—"Coke produced, 21,370 tons. No. 1 blast furnace produced 8,890 tons; No. 2 blast furnace produced 12,390 tons; foundry furnace produced 1,165 tons; open hearth produced 15,467 tons; blooming mill produced 15,572 tons; rail mill produced 5,104 tons; 18-inch mill produced 6,701 tons; 12-inch mill produced 2,479 tons, 8-inch mill produced 733 tons; rod mill produced 4,000 tons.

The Mount Lyell Mining and Railway Co., Limited, cable:—From June 3rd to 30th, inclusive, a total quantity of 11,961 tons of ore has been treated, being 7,937 tons from the Mount Lyell mine and 3,029 tons from the North Mount Lyell mine, also 995 tons concentrates. The converters have produced during the same period 320 tons of blister copper, containing 317 tons copper, 10,767 ozs silver, and 484 ozs gold. Furnace in blast 672 hours. Reduced output due to decreased tonnage North Mount Lyell ore smelted.

The Rooiberg Minerals Development results for June, 1920:—Ore mined, 1,313 tons; total ore accumulated, 9,394 tons; ore treated, 2,494 tons; concentrates produced, 50·6 tons; expenditure, including realisation charges and exploration, £6,944; revenue, £8,157.

Reports and Notices.

We are informed that Mr Charles Henry Morton, senior partner of Messrs Avison, Morton, Paxton, & Co., solicitors, Liverpool, has been elected president of the Law Society of the United Kingdom.

Westminster Electric Supply Corporation, Limited, have appointed Captain E. I. Bax to succeed the late Right Hon. Lord Downham as chairman.

GOVERNMENT STOCKS, &c.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to April 30, 1920 (new style January 14 to May 13, 1920):—

		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross receipts, April, 1920		6,096,246.48	5,359,646.00
Do do 1919		3,709,915.40	2,857,812.80
Estimated receipts for four months (Law of Control)		9,633,333.33	3,566,666.67
Actual receipts for 1920, four months		20,616,348.18	21,177,961.90
Actual receipts for 1919, four months		14,304,256.95	13,265,228.40
Difference between estimated and actual receipts for four months	1920	+ 10,983,014.85	+ 17,611,295·23
	1919	+ 4,670,923.62	+ 9,698,561.73

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and naxos emery, 49⅓ per cent. is applied towards increasing the minimum rates of interest and sinking fund on the external gold loans of 1881 to 1893.

The receipts in gold from both naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

RAILWAYS.

GUAYAQUIL AND QUITO RAILWAY COMPANY 6 PER CENT. PRIOR LIEN MORTGAGE GOLD BONDS.—Tender of Bonds for redemption.—The eighteenth, nineteenth, and part of the twentieth half-yearly amortisations of the above bonds took place on July 14th at the banking house of Messrs Glyn, Mills, Currie, and Co., by public tender, the amount to be applied being £22,803 8s. 5d. Tenders amounted to £51,531 2s 6d, ranging from £90 to £100 per cent. Tenders at £97 16s 3d and under were accepted in full.

BANKS.

YORKSHIRE PENNY BANK.—The report for the year ended June 30, 1920, states that deposits at that date totalled £28,822,296, as against £26,086,358 June 30, 1919, an increase of £2,735,937. During the year over £1,250,000 has been withdrawn by depositors for the purchase of property and Housing bonds. Since June 30, 1914, depositors have withdrawn upwards of £18,500,000 for investment in British Government War Loans, Housing bonds, &c. Although this amount has been withdrawn, the deposits, which on June 30, 1914, were £20,720,689, have increased by £8,101,606 to £28,822,295. The securities repayable within one year amounted to £788,475, as compared with £1,126,639 in 1919. British Government War stocks and other securities were £8,663,953, against £8,407,844. All the securities have been written down to market value. Loans on security and other accounts amounted to £5,425,577, compared with £3,970,984.

BANK OF NEW SOUTH WALES.—The report for the half-year ended March 31, 1920, states that the net profits, after deducting rebate on current bills, interest on deposits, paying income, land and other taxes, amounting to £133,933 (making in all £201,810 for the year), reducing valuation of bank premises, providing for bad and doubtful debts and fluctuations in the value of investment securities, and including recoveries from debts previously written off as bad, amount to £304,219, which, with £140,370 brought forward, makes £444,589. The directors recommend a dividend to March 31, 1920, at the rate of 10 per cent. per annum, augmenting the reserve fund by £75,000, and carrying forward £150,446.

MISCELLANEOUS.

BRAZILIAN TRACTION, LIGHT, AND POWER.—The report for 1919 states that the revenue received under contracts with subsidiary companies was $8,500,234, interest on investments and miscellaneous income $376,771, together $8,877,095; less general and legal expenses and administration charges, $139,732; interest and charges on secured gold notes and other loans, $663,305; provision for general amortisation, $200,000; leaving net revenue $7,873,967. Dividends on preference shares at 6 per cent. per annum absorbed $600,000, leaving surplus for year $7,273,967, which, with the balance of $7,613,041 brought forward, gives a total of $14,887,008. During the past three years $12,300,000 has been utilised towards meeting capital expenditure on the properties, and a corresponding amount has therefore been transferred to general reserve account, leaving $2,587,008 to be carried forward.

C. ARTHUR PEARSON, LIMITED.—The report of C. Arthur Pearson for the year ended May 31, 1920, shows a balance, after providing for reserves and directors' fees, of £37,509, which, with £40,742 brought forward, gives a total sum to credit of profit and loss of £78,251. The directors propose to pay a dividend at the rate of 10 per cent. on the ordinary shares, to carry to reserve £5,000, to set aside for pension scheme £1,500, and to carry forward £40,501.

ENGLISH SEWING COTTON COMPANY, LIMITED.—The directors report that the accounts for the year ended March 31, 1920, results as follows:—After providing for depreciation, debenture interest, excess profits tax, directors' fees, law charges and auditors' fees, the net profit for the year is the sum of £730,124; to which has to be added the balance for last year (after adjustment), £106,165—£836,289. This amount the directors propose should be dealt with as follows:—Payment of preference dividend (5 per cent.) for the year ended March 31, 1920 (of which 2½ per cent. was paid on September 30, 1919, and 2½ per cent. on March 31, 1920), £50,000; payment of a final dividend of 12½ per cent. on the ordinary shares (making with the interim dividend of 2½ per cent. already paid 15 per cent. for the year), £300,000; reserve for stock contingencies, £100,000; general reserve, £100,000; dividend equalisation reserve, £100,000; pension fund for employees, £27,681; balance carried forward, £158,608—£836,289.

GLOUCESTER RAILWAY CARRIAGE AND WAGON.—The report for the year ended May 31, 1920, states that the profit on trading, after making the usual provision for depreciation, and carrying £100,000 to reserve, is £92,565, and the disposable balance, after deducting the interim dividend paid February 1st last, amounts to £117,617. The directors recommend a dividend for the past half-year at the rate of 10 per cent. per annum, less tax, making 10 per cent. for the year, and a bonus of 5 per cent., free of tax, leaving £65,117 to be carried forward.

HUDSON'S BAY COMPANY'S LAND SALES:—For quarter ended June 30, 1920:—

	1919		1920.
Farm Lands:—			
Acres	67,650	....	60,708

Town Lots:—			
Sold for	1,340	....	4,710
Total Receipts:—			
On account of capital	131,100	..	104,070
On account of interest			38,080
			142,150

LONDON SHOE COMPANY.—The report of the London Shoe Company for the year ended March 31, 1920, states that after full provision has been made for depreciation, excess profits duty and income-tax, the net profit amounts to £14,409, which, with the balance brought forward (£1,608), makes a total of £16,017 available. The directors recommend placing to general reserve £4,000, a dividend of 3s per share, free of tax, on the ordinary shares, balance undistributed £2,117.

MAPPIN AND WEBB (BRAZIL), LIMITED.—Subject to resolutions being passed at meetings, increasing the share capital of Mappin and Webb, Limited, an offer may probably be made, in the autumn, to the holders of preference shares in Mappin and Webb (Brazil), Limited, to exchange them for preference shares in Mappin and Webb, Limited, carrying a higher rate of dividend than the preference shares in the Brazil company.

MATHER AND PLATT, LIMITED.—The directors announce that they have resolved to issue a further 210,000 ordinary shares of £1 each in the company to provide extra capital required in view of the large extensions which are now in progress at the company's works. Such shares will be issued at par to the holders of existing ordinary shares in the proportion as nearly as may be of one share for every five existing ordinary shares. Letters of allotment will be issued to the shareholders on or about August 20, 1920. They have also resolved to recommend that a number, not exceeding 200,000, of the unissued shares shall be issued as ordinary shares to the company's employees upon such terms, and in such proportions, and under such conditions as the directors may from time to time determine. These 200,000 shares are in addition to the 210,000 shares above mentioned.

WALKERS, PARKER AND CO.—The report for 1919 states that the profit for the year amounted to £70,696, which, with £57,803 brought forward, makes £128,499, and after providing for dividend of 12½ per cent., declared at the general meeting on March 10th last (since paid), and the allocation of £2,000 to workmen's compensation insurance fund, there remains £98,687. The directors recommend that £50,000 be placed to reserve as a provision against contingencies which may arise, leaving a balance of £48,687 to be carried forward.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions are still somewhat unsettled, though distinctly more favourable after almost continuous rains during the past fortnight, and longer spells of sunshine, with a generally higher temperature, will greatly benefit growing crops. A large portion of hay left cut has suffered damage, and in many fields cereals were beaten down, consequently some will have to be cut by hand, which will entail extra expense to the farmer. Only small quantities of native wheat come forward at the principal distributing centres, and realise full maximum prices for all useful milling grades. Fair supplies of imported grades were released during the week, consisting of Plate and North American varieties at official prices. Crop prospects in the United States are well maintained, the outturn of winter wheat giving every satisfaction, and the condition of spring sowings excellent. Reports from Canada are of a like nature, and indicate an increase in yield of from seventy to 100 million bushels on last season. Rain is urgently

(m) Equivalent to 24 per cent on old capital.

wanted in Argentina for the new cereal crops, and there is no news so far of the drought being broken, while shipments from this direction, for the present season, are now drawing to a close. Sufficient rains have fallen in the chief wheat-growing districts of the Commonwealth, and crop prospects are more encouraging. The monsoon in India has provided adequate moisture, and same will largely determine the extent of grain exports in the near future. The demand for G.R. flour continues generally quiet, while liberal allocations of imported have been made to millers for the 10 per cent. admixture. English G.R. quoted 63s 6d per sack, ex mill, and imported, 65s 9d per 280 lbs, ex warehouse. Low-grade imported in quiet request at later rates. Maize has further hardened in value, the recent low prices having attracted buyers, and the lots pressed for sale mostly disposed of. Recent shipments from the Plate were practically all for the Continent and U.S.A., nothing being cleared to this country direct, which fact also tended to improve values in all positions. It is reported that fair quantities are available for export from the Balkan States, and liberal shipments of late have occurred from Roumania to Continental importers. Crop prospects in the U.S.A. have improved, but official reports indicate the acreage at 1½ millions less than last year. Plate, ex ship, is quoted at 64s, and ditto, landed terms, 66s. On c.i.f. terms, cargoes were more freely offered, and a sailer of Plate, May 5th bill of lading, changed hands at 64s. Steamers, old crop loading, are quoted at 65s; August-September, 65s; September-October, 66s. Parcels of ditto, afloat, sold 62s to 61s 9d; arrived, 62s 3d; June-July, 63s, 61s 9d, 62s; July-August, 63s, 63s 6d, 61s, 61s 6d; August-September, 62s 9d, 63s, 59s 9d, 61s 3d per 480 lbs. Barley trade quiet, owing to paucity of available supplies. English malting nominally 110s to 115s; grinding, 90s to 95s per 448 lbs. Of imported, American feed, 75s, landed; Canada, ditto, 73s, ex ship; and Plate, landed, 80s to 81s per 400 lbs. On c.i.f. terms, superior to No. 1 Californian, July, sold, 100s per 448 lbs. No. 4 Canada Western, July-August, sold, 68s; October-November, 67s per 400 lbs, all to outports. Oats were in better demand, and prices ruled firmer. English ranges up to 80s per 336 lbs, according to quality. Of imported, Plate quoted 61s; and American white clipped, 62s, landed, per 320 lbs. On c.i.f. terms, a good deal of irregularity was noticeable, and Plate, f.a.q., June-July, sold 51s, 52s, 49s 6d, and 51s; July-August, 49s 6d, 48s 3d, and 47s 6d per 320 lbs. Beans and peas remain quiet of sale. Chartering in the chief grain markets was on a limited scale, and after 80s paid for maize tonnage from Rosario, the market settled down quietly at 77s 6d per ton. North American ports dull, and rates on the easy side, with 10s per quarter done for a prompt steamer to Antwerp. Rates for autumn loading indicated are Gulf 13s per quarter, at which figures charters were effected, 11s 6d Northern Range American ports, and 12s Montreal, with 12s 6d Antwerp/Rotterdam range. India remains largely nominal at about 80s on dead weight, with an absence of orders, while Australia is nominally unaltered. Time charter business slack, especially for steamers of 7/10,000 tons, which point to 16s to 17s, while handy sizes indicate 20s to 22s 6d per ton per month for six months' trading.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1919-20, contrasted with 1918-19, 1917-18, and 1916-17.—(Particulars of imports of wheat and flour temporarily discontinued):—

THE IRON AND COAL TRADES.

Our Glasgow correspondent (writing on Thursday) says:—For a broken week a large volume of productive and finishing-off work has been executed in the West Country since Monday, every department in iron and steel having been wrought up to their utmost capacities. In all the leading branches operations were suspended from noon to-day, and will not be resumed *de jure* till the forenoon of the 26th inst. Producers report that consumers in steel have been more anxious this week than of late to place forward orders (steel for plates particularly), but sellers have been acting most conservatively, and have only been committing themselves lightly. There has been some more talk of offers being in circulation of material sales from the United States; but terms of delivery are not wholly satisfactory, so that no bulk of business is going through. Prices locally for home trade are very stiff at the combined standard, and the highest points of the year, which reflect an all-round rise since January (in shipbuilding qualities) of fully £5 a ton—at £30 10s for boiler plates, £26 to £33 for stop plates, and £25 10s for joists and angles. Black sheets, in the same period, are dearer by from £10 to £14 a ton—at £38 10s for $\frac{3}{16}$ to $\frac{1}{8}$ gauge, and £44 for 20 to 24 g. Pig-iron makers, steel makers, shipbuilders, and engineers (general and special) give the state of their order books for the new half-year as satisfactory, and the outlook as encouraging—provided there is no outbreak of industrial trouble. Coal supplies have been rather more plentiful this week, and, owing to the export of the better qualities being still barred, several collieries have been forced to lay down stocks at the pit heads.

Our Sheffield correspondent writes:—Most branches of the steel trade are experiencing something in the nature of a slump as regards the placing of new business. In all markets there is a complete lack of confidence in the stability of current prices, with the result that speculative buying has ceased. None of the works are assured of business next year, although they have plenty to carry on with for periods varying from two to six months, according to the particular materials which they deal with. For this reason, perhaps, makers have taken no step towards easing quotations. They are now, however, desirous of accepting orders, and there is a disposition to promise comparatively early delivery. French, Belgian, and American competition with British iron-steel material is steadily growing. Belgian finished iron and steel is being delivered here below local prices, and America can undersell British billets by £2 per ton. Not much is heard of German competition, except in some of the Continental countries. Despite the acute shortage here, a large quantity of British pig-iron was shipped to Italy, Belgium, France, and Germany last month. We are importing basic pig from the United States at very high prices. Engineers still report continued famine conditions in the supply of iron castings. As many as possible are being bought from Belgium and Holland. Factories are busy on hand tools for nearly all parts of the world. In this department new bookings are on a small scale, but some have orders on hand, the execution of which will absorb their activities over 12 months, and in a few cases two years. The poverty in new business is felt in nearly every branch of local industry, including silver, electro-plate, and cutlery ware. There is no pause in the rise in costs, and several important wage advances are imminent. There is now no scarcity of coal or coke, and users desiring to build up reserve stocks are able to do so. They are, however, doing this cautiously on account of the heavy capital outlay which it involves. House is abundant, and the public cannot be persuaded to stock its cellars in readiness for the winter. Prices current per ton at pits are:—Best South Yorkshire steams, 33s 2d to 33s 8d; do. Derbyshire, 32s 8d to 33s 2d; best Tyne steams (export), 150s to 160s; steam cobbles and nuts, 31s 8d to 32s 2d; washed smalls, 28s 8d to 30s 2d; small slacks, 23s 2d to 24s 2d; branch, 37s 2d to 37s 8d; best Silkstone, 33s 8d to 34s 8d.

Our Middlesbro' correspondent's report, dated July 15th, is as follows:—Pig-iron: Although the pressing demand for foundry pig-iron is easier, by reason of the Scotch holidays, there is still no surplus available for export. Prices are unchanged at 217s 6d for Cleveland G.M.B. No. 3 and No. 4 foundry, and 260s for East Coast hematite mixed numbers. Manufactured iron and steel: There is a tendency to hold back further inquiries for steel, but manufacturers have so much work on hand that they are indifferent. There is no early prospect of easier prices: Steel ship plates, home, £23 10s; steel ship angles, £23; iron ship angles, £30 15s; iron bars, £30; steel rails, £23 net. Iron ore: Business very quiet. Consumers are well supplied, and are benefiting considerably by the falling freights.

MANCHESTER, July 15.

A more optimistic feeling has prevailed in the market during the past week than for some time back, and although there has not been any big improvement in the amount of business passing, the inquiry has been more encouraging, and in some sections the sales have been larger. An extensive inquiry has come through in a variety of goods for India, and fair sales have taken place in bleaching and printing descriptions, but very little has been done in sized cloths. Excellent news continues to come to hand relating to the monsoon rains. No change can be recorded in the attitude of shippers to China. More promising advices have been received from the Near East, and goods that have been held back are now being sent forward. Finishing and printing cloths have attracted increased attention for South America. A little more demand has been about in home trade fabrics. Manufacturers who have sold have immediately stiffened in price. The general inquiry in home American yarns has been on broader lines, and the turnover shows a slight improvement, but prices continue very irregular. Comparatively little has been done in shipping bundles. A little more testing of prices has been reported in Egyptian yarns, but users have not been in the mood to place orders of any weight.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—There is no material change in market conditions, and owing to the almost complete stoppage of business, quotations are more or less nominal. Already some of the woolcombing firms are working short time, and some spinners have also a proportion of their machinery standing. Some small lots of tops are changing hands, and forced sales are still being made, but spinners show no disposition to buy for forward delivery. A good average 64's top is now quoted at about 7s 6d per lb, but sales have been made at lower prices. Most spinners are still well employed on old contracts, but the lack of new business is beginning to cause some concern, and if the present lull continues short time will become general throughout the trade. Manufacturers are in much the same position, most of them have sufficient work in hand to keep machinery running for some weeks, but there is practically no new business coming to hand, and stocks are beginning to accumulate. On account of the special demand for English down wools, very high prices are being paid for these descriptions in the country, but most other sorts are more or less neglected. The outlook as regards labour is unsatisfactory. The operatives have rejected the employers' offer of a 10 per cent. advance, and in the present state of trade the employers assert that they are unable to make any further concessions.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

There seems at present to be an abundance of rain in New South Wales and Queensland, during the past week some very favourable weather cables having been received in London, one intimating that quite enough rain has fallen for the present. Central Queensland has witnessed 2 to 4 inches. If a more average rainfall throughout Australia could be relied upon, the country would be ideal for pastoral and agricultural purposes, but it seems as if it must be either a drought or a deluge. A great deal has no doubt been accomplished by irrigation, artesian wells having become more common, but there is still much to be done in this respect. The development of intensive farming seems on the whole to be the best thing for Australia. Admittedly the merino is an animal well suited for the open country, and the extension of arable and dairy farming has as its accompaniment an increase in crossbred sheep. This is the month when shearing becomes general, and sheep should clip fairly light fleeces, though in the majority of cases the drought will have told its tale in regard to length and soundness of staple.

Mr Hughes' scheme in regard to the disposal of the new clip need not now seriously concern the trade. No doubt the Prime Minister's motive was good. He has laboured diligently to preserve a good market for the new clip, and, like him, we very much regret that for at least one season Australian pastoralists are not likely to receive high prices for their clips. Good prices may be expected, certainly not as low as the pre-war level, but not half the prices ruling last March will be current next season. Unless there is a vast alteration in the demand for wool on account of German, Russian, and other central countries, prices must inevitably suffer. The worst is now known in regard to the E.P.D. Trade is suffering acutely on account of restricted financial facilities, and the Government can only thank themselves for the loss they will suffer in consequence of wool values being forced to a lower level. They have dealt a crushing blow to the textile industry, whereas one would have thought it would have paid the Government far better to have helped the trade to lift present stocks. To-day the entire industry is suffering, refusing to buy Government-owned wool as freely as was recently the case, and everything indicates that the 2,000,000 bales will be sold on a distinctly lower basis than obtains to-day.

The auctions have been continued this week. There has been no marked improvement, as some expected, the refusal of Parliament to lower the E.P.D. having had a further depressing effect upon the business world, and there is abroad a spirit of indifference among wool buyers. Some appear to be "fed up" with the constant demands for increased wages and the heavy taxation, these having given rise to anything but the best of feelings throughout the trade. Everything indicates that an entirely new state of affairs is developing in the wool textile industry. There is serious talk in Batley and Dewsbury, as well as Huddersfield, about short time. There is also some possibility of a strike at the end of this month, the efforts to come to an agreement regarding the further demand of textile workers for a 40 per cent. increase in wages having completely failed. Orders continue to be conspicuous by their absence, and cancellations have not ceased, which means that the future is being regarded with a certain amount of caution.

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

The lower level of prices of Argentine linseed brought out crushers, who bought freely large quantities round £31 to £32 per ton, or at about £4 less than quoted a few days previously. The market has since been rather quiet, midweek value being about £32 for spot and for July-August shipment. Little trade has transpired in Indian linseed shippers, quotations being above the market, Egyptian cottonseed has taken an easier turn, and is 30s. cheaper on the week, but Indian is steady, on the rise in silver, and value about unchanged.

In the oil section linseed oil has fluctuated. After having fallen to £68 10s, ex mill Hull, demand developed on substantial lines, and on Monday there was an appreciation to £72, since when, however, the advantage was lost. The undertone of the market is firm, and buyers on Tuesday were readily bidding £68·10s for September-December delivery, without finding sellers to accommodate them. Cotton oils are weak, and have again slumped badly in the absence of demand, current prices being from £3 to £6 per ton down on the week, with but little prospect of improvement at present.

Though stocks of linseed are not large, supplies are coming along pretty well, the import in June again being of a substantial character. Cottonseed was also a good import, and the month's aggregate a fully average one. The returns for the six months January-June show that the imports of oilseeds and oilnuts into the United Kingdom amounted to 719,052 tons, against 642,220 tons in the corresponding half of last year, or an increase of 76,832 tons. Linseed, principally from Argentina, accounted for 190,163 tons, against 215,916 tons; cottonseed 238,281 tons, against 182,601 tons; and oilnuts and kernels 243,671 tons, against 210,506 tons. The estimated commercial yield of oil is 218,000 tons, and the exports 58,391 tons, which included 27,781 tons of linseed oil and 10,059 tons of cotton oil. The net imports of vegetable oils from abroad in the six months were 119,272 tons, against 104,706 tons in the corresponding period of last year. The figures are evidence of the satisfactory expansion of the industry, though the quantity of raw material dealt with in the mills is yet a little short of the level of 1913.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The ease in the prices of hides from the home butchered cattle, mentioned in my last week's report, was more marked at the public auctions held here in Bermondsey on Thursday last, ox and heifers falling from 1d to 1⅞d per lb, while bulls made from ⅞d to 1⅜d

less money. Calf skins were steady at last week's figures, although the lighter weights made less money. Both pelts and lambs in sheepskins were from 9d to 3d per skin down.

The inquiry for foreign hides of all descriptions is poor, home tanners not being interested in anything but small parcels at prices which look fairly reasonable. American tanners are practically the only buyers in the S.A. market, and it is reported that sales are effected at prices which are too high for the home trade here. The only business done in dry hides is in small parcels of better quality, the commoner descriptions being neglected.

Little change is to be noted in the position of home tanned sole leather, business continuing very unsatisfactory. Small parcels of bends suitable for the repairing section of the trade are being taken up, but even this business is unevenly distributed, as I hear of cases where practically nothing at all has been done of late. Shoulders and bellies hang fire, while considerable quantities of cheeks and faces are on offer at low prices without finding buyers. Supplies of leather are accumulating, although most of the yards have reduced their input, and it is freely asserted that stocks on hand are quite sufficient to cover likely requirements for some considerable time ahead, and that it would not make much appreciable difference to the position if the input was still further reduced.

Upper leathers are in a similar position, with supplies getting fairly bulky. I hear that considerable quantities of upper leather of well-known makes of foreign origin are being offered around at quite a reasonable price, but so far no buyers have been found.

Boot manufacturers find the demand getting less and less, the larger buyers being right out of the market. It is anticipated that short working time will be further increased soon, thus adding to the people already unemployed in the shoe trade.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, July 16.

The markets for the chief part continued in a quiet and generally featureless state, no increase in buying power being observable, while financial stringency is still felt. The operation of carrying stocks involves the finding of large sums of money, and therefore the tendency is to keep same down to a low ebb.

SUGAR.—Fair allotments were made to the grocery trade. Free parcels were dealt in quietly, white Mauritius at 144s; ditto, Java, 144s; American granulated, 145s; and crystallised West India, 133s to 138s. With little or no improvement in demand for American syrup, business was only possible at some concession in price. Small sales resulted in honey and glucose.

COFFEE.—Spot market steady for the more attractive home trade qualities, but export qualities again experienced a slow trade. Moderate quantities were offered in auction. Terminal market dull, and December sold, 75s to 72s.

COCOA.—Market more or less nominal, trade remaining at a standstill.

TEA.—Good to fine parcels again experienced sustained competition, and recent rates were not only fully supported, but in some cases slightly exceeded. Common and thin liquoring lots rather irregular and quiet of sale. During the week 35,480 packages Indian and 23,000 packages Ceylon were brought forward in public sale.

RICE.—Market steady, and fair sales again resulted for export. Bran steady, and August-September, Rangoon sold, £12 5s. Beans and peas in steady request.

SPICE.—Pepper market ruled quiet, but generally steady. Fair black Singapore, spot, sold, 6d; ditto, August-October, steamer, 6¼d to 6½d and 6¼d; Lampong, spot, 6⅝d; Aleppy, 7d; Tellicherry, 7½d; white Singapore, 11d; and Muntok, 11½d. Zanzibar cloves, spot, sellers, 1s 3d to 1s 4d; pimento, 4d per lb. Tapioca quiet and rates easy. Fair flake, spot, sold, 2d per lb; ditto, August-October, sold, 21s 6d; fair Penang seed pearl, spot, sold, 22s 6d; ditto, August-October, sellers, 24s; small sago, August-October, 31s; sago flour, spot, sold, 19s 6d to 20s; ditto, August-October, 19s to 19s 3d; farina, August-October, 26s; desiccated cocoanut, fine cut, spot, 65s; medium, 70s cwt.

JUTE.—A dull tone prevailed, only retail transactions being effected with spinners, while new crop declined under increased pressure to sell. This in turn led to weakness in old. Native first marks, actuals, July-August, old, sellers, £43; subs, £40; new crop, actuals, August-September, sold, £50 to £46. Hessians quiet. 10 oz, spot, London, sold, 48s; A twills, spot, done 130s. Cement, 36 by 20, light C, August-September, Antwerp, sold, 71s 6d, c.f. and i terms.

HEMP.—Manila firmer on reserved offers from the other side, and fair buying disposition shown. J grade, August-October, sold, £65 to £66; September-November, £65 10s to £66 10s. New Zealand quiet, with dock lots of fair sold at £51. All descriptions of brush fibres are quite neglected.

SHELLAC.—Market quiet during the week. Fair T.N., spot, sold, 680s; August, 685s to 665s; and October, 625s to 610s.

COPRA remains slow. F.M.S. Straits, August-October, London, sold, £47 10s to £47; ditto to near Continent nominal. F.M. Straits, August-October, Marseilles, sold, £47. Ceylon largely nominal. Palm kernels, July-September, sold, £31 to £31 5s and £31.

MENTHOL.—Kob-Suz, spot, sellers, 27s 6d; Yazawa, 25s; peppermint oil, 8s 9d and 8s 3d respectively; aniseed, 4s; slab camphor, spot, sold, 6s 4½d per lb.

EGG PRODUCTS in quiet support. Liquid yolk, spot, sold, 65s to 70s; liquid whole egg, 70s per cwt; dried yolk, spot, 9d; native dried whole egg, spot, 9d; spray, 1s 9d; albumen, spot, sold, 4s per lb.

RUBBER quiet, and rates easier on the week in sympathy with depressing American advices. Plantation crepe, spot, sold, 1s 11d to 1s 10½d; August, 1s 11d; October-December, 2s 1¼d to 2s 0½d; January-June, 2s 3¼d to 2s 2¼d. Ribbed smoked sheet, spot, sold, 1s 10¼d to 1s 9¼d. Fine hard Para, spot, 1s 11d.

OILS.—Linseed steady, quiet. Spot, net, naked, 73s; July-August, 71s; September-December sold, to 69s. Rape lower. Crude, spot, 75s; refined, 80s. Cotton dull. Crude Egyptian, 60s; Bombay, 50s; refined edible, 80s. China wood easier. Hankow, spot (barrels), sold, 112s; July-August, 90s; and Hong Kong, spot, 110s. Palm kernel quiet. Crushed, spot, 65s; extracted, 64s. Palm easier. Softs, July-August, 51s; Lagos, 53s. Cocoanut dull and weak. Ceylon, spot, 80s; July-August, 77s; Cochin, ditto, 82s. Soya easier. Oriental, afloat and July-August, 67s 6d; deodorised, 90s. Japan fish slow, with sales, July-August (cases), at 40s. Cod liver steady. English, spot, sold, 50s. Ground nut quiet. English crushed, naked, spot, 78s; deodorised (barrels), 90s. Turpentine active, irregular, and firmer. American, spot, 181s; August, 154s; July-December, 151s. September-December, 143s. Rosin slow. American, grade B, 45s; F, 56s; G, 56s; K, 57s; M, 57s 6d; WW, 59s; French, F/G, 55s; H, 56s 6d; WW, 58s; extra pale, 60s; Spanish, c.i.f., London, grade F, 43s; extra WW, 47s per cwt. Petroleum steady, quiet. American, spot, 2s 1¾d; and water white, 2s 2¾d per gallon.

OILSEEDS.—Linseed market firm. Calcutta, June-July, quoted £37; July-August and September sold, £35 15s to £37; Bombay, July-August quoted £37 10s. Plate afloat, Hull, sold, £31 10s; July-August, £32 to £31 15s. Rapeseed neglected. Toria, July-August, Hull, sellers, £31; Real bold Ferozopore, £29; brown Cawnpore, £28. Cottonseed easier. London Egyptian f.a.q., spot, quoted £16 5s; July-August sold, £17 to £16; Bombay, spot, old, Hull, sold, £9 10s; ditto, new, £10 10s; July-August, £11 10s. Castorseed inactive. Bombay, July-August, Hull, sellers, £29. Gingelly quiet. Chinese, July-August, to continent, sellers, £38 10s. Groundnuts slow. Chinese, dry decorticated, June-July, £37 10s per ton.

METALS.—Tin continued in strong demand during most part of the week, and the course of values moved in an upward direction until last Tuesday; but the tendency was slightly easier on Wednesday respecting cash, which registered £265 to £266, and subsequently £265 10s; three months, £272 to £271 10s; while by Thursday little change occurred, cash being sold at £265 to £264 10s, and since at £265 10s; three months, £272 to £270, rallying again to £272, and finally done at £271 10s. At Friday's session prices were carried up higher, cash advancing to £267 10s, while three months changed hands at £272 to £273, and finally at £272 15s. English ingots, £267 to £268. Copper advanced at the week's commencement, no pressure to sell being evinced, while standard, cash, reached £91 10s, and three months, £94; but ease followed on Tuesday, under rather liberal offerings, when prices of these dates relapsed to £91 and £93, further declining by the middle of the week to £90 and £92 10s respectively. At Thursday's session, middle of August sold at £90 15s to £90 10s; and three months, at £92 10s to £92, and again at £92 10s. A subdued tone prevailed at Friday's market, values being little changed, while standard cash registered £90 5s, and three months £92 12s 6d to £92 10s. Electros, £106 to £111. Lead easier, closing £33 10s to £35. Spelter easier, while officially quoted at £40 15s to £42 5s. Antimony regulus: English, ordinary to best, £60 to £63. Wire bars quoted at £109 to £111, being dearer. Quicksilver rules at £21 per bottle.

TALLOW. — Messrs Colchesters and Woolner write on July 14th as follows:—The tallow market has been quiet during the week, with prices 4s lower to-day. The demand is mostly of a retail character, whilst sellers are anxious to dispose of their holdings on a larger scale. At auction to-day 1,576 casks tallow were offered, and 142 were sold. Quotations are:—Australian mutton: Fine, 70s; good to fair, 68s to 64s; dull to dark, 59s to 56s; hard, 68s. Australian beef: Fine, 66s; good to fair, 64s to 60s; dull to dark, 58s to 56s; sweet, 70s. Present shipment from Australasia: Mutton, fair coloured, 48 degs. none; and mixed, 43½, c.i.f., London, 65s. The market letter is lower, tallow 4s, stuff 4s. Town tallow, 63s per cwt. Rough fat per 8 lbs, 6½d to 1s 2½d; melted stuff, 44s per cwt. Quotations are:—Town: 59s net cash, naked, ex works. Country: Frail casks, 60s; home melted, shipping casks, net f.o.b., good coloured none; fair to dull, 61s to 58s. Bone fat: white, none; pale, 56s; benzine, 50s; melted stuff, 50s, f.o.b.

30th June, 1920.

MANAGING PARTNERS:

The Hon. A. H. MILLS. MAURICE G. C. GLYN.
LORD WOLVERTON. LORD HILLINGDON.
LAURENCE CURRIE. General The Hon. Sir H. A. LAWRENCE, K.C.B.

General Manager: Brig.-General A. MAXWELL, C.M.G., D.S.O.

Secretary: Major ERIC GORE BROWNE, D.S.O.

Every description of British and Overseas Banking and Exchange business transacted. The Bank undertakes the office of Executor and Trustee.

A Copy of this Prospectus has been filed with the Registrar of Companies.

The special permission of the Committee of the Stock Exchange for dealing in the Stock after allotment will be applied for.

The SUBSCRIPTION LIST OPENED on the 12th JULY, 1920, and will CLOSE on or before the 19th JULY, 1920.

SIR W. G. ARMSTRONG WHITWORTH AND CO., LTD.

(Incorporated under the Companies Acts, 1862 to 1890.)

SHARE CAPITAL—

	£11,012,500	...	£10,012,500

DEBENTURE STOCK—

£2,500,000 FOUR PER CENT. MORTGAGE DEBENTURE STOCK	£2,500,000	...	£2,500,000
£2,000,000 SECOND MORTGAGE DEBENTURE STOCK	£2,000,000	...	—

ISSUE OF £2,000,000 SECOND MORTGAGE DEBENTURE STOCK AT 95 PER CENT.

carrying interest at 6½% per annum and redeemable on or before the 1st January, 1946.

The Company will have power under the Trust Deed securing the Second Mortgage Debenture Stock to issue up to £3,000,000 further stock ranking *pari passu* in point of security with the stock of the present issue at such rate or rates of interest and on such terms and conditions as may be thought fit, but not so as to be redeemable at a higher premium than that of the present issue.

Under the terms of the Trust Deed the yearly sum of £80,000 is to be applied in the redemption of the Stock of this issue by drawings at 102½ per cent. or by purchase in the market at any less price. The first annual redemption will take place on or before the 1st January, 1922.

The Trust Deed securing the Debenture Stock will constitute a specific Mortgage on the Freehold Land and Works of the Company in England specified in the Schedule, and a floating charge on all other assets of the Company present and future subject only to the Mortgage and Charge created by the prior Trust Deed securing the existing £2,500,000 4 per cent. Debenture Stock.

In addition to the redemption fund above specified the Company may redeem the outstanding stock at 102½ per cent. in whole or in part at any time after 1st January, 1922, upon giving six months' previous notice.

Interest will be payable half-yearly on 1st January and 1st July, the first payment being made on 1st January, 1921, and calculated on the instalments as from their due date of payment.

The GOVERNOR and COMPANY of the BANK OF ENGLAND and Branches are authorised to receive, as Bankers for the Company, applications for the above £2,000,000 6½ per cent. Second Mortgage Debenture Stock at 95 per cent., payable as follows:—

On Application	5	per Cent.
On Allotment	20	,, ,,
On September 1st, 1920..	25	,, ,,
On November 1st, 1920..	45	,, ,,
	95	

The issued Share Capital of the Company, as above stated, is £10,012,500, the whole of which ranks behind the present issue.

The Dividends on the Preference Shares have been regularly paid, and the Dividend on the Ordinary Shares has for the past seven years been equal to 12½ per cent. per annum, recently paid free of tax up to 5s. in the £.

The certified Profits for the four years 1912-1915, after charging Depreciation and Interest on the Debenture Stock and Loans, were as follows:—

For the year ended	December 31st,	1912.....	£675,526
Do.	do.	1913.....	689,048
Do.	do.	1914.....	801,885
Do.	do.	1915.....	852,348

The Accounts for the years 1916, 1917, 1918 and 1919 have not yet been published owing to the fact that negotiations with various Government Departments have not been completed. The average net profits for these years, however, after making the above deductions, and after making provision for any possible charge for Munitions Levy or Excess Profits Duty, will in the Directors' opinion not be less than £1,000,000 per annum, which sum does not include any profit that may result from the employment of the proceeds of the issue of Capital at the end of 1919, amounting to about £3,500,000. The present issue of £2,000,000 of Debenture Stock will provide further working Capital.

An issue of £1,000,000 non-cumulative third Preference Shares was made in September, 1918, when a commission of 2½ per cent. on the nominal amount of the issue was paid to the underwriters of the issue.

Every Ordinary Share confers one vote at a meeting of the Company, but the Preference Shares do not confer any right to vote.

Arrangements have been made with Messrs. Linton, Clarke and Co. to underwrite this issue of Debenture Stock in consideration of a commission of 2½ per cent. plus an over-riding commission of ½ per cent. The contract is dated the 30th day of June, 1920, and is made between the Company of the one part and Messrs. Linton, Clarke and Co. of the other part.

Failure to pay the amount due on allotment, or the subsequent instalments, at the due dates will render the allotment liable to cancellation, and all money previously paid liable to forfeiture. Interest at 10 per cent. per annum will be charged on overdue amounts.

A brokerage of ¼ per cent. will be paid in respect of allotments made on applications bearing Stockbrokers' stamps other than applications from Shareholders or Debenture Stockholders or in respect of underwriting.

It is intended to apply for an official quotation of the Stock on the London Stock Exchange.

Applications, which must be accompanied by a deposit of 5 per cent. on the amount subscribed, must be made on the prescribed form and forwarded to the Company's Bankers, the Bank of England, at the Loans Office, 5/6, Lombard Street, London, E.C., to the Newcastle-upon-Tyne Branch of the Bank of England, or to any of the other Branches of the Bank of England where also Prospectuses and Forms of Application may be obtained.

In allotting the Stock the Directors will give preferential consideration to applications from Shareholders and Debenture Stockholders.

If any application be not accepted the application money will be returned in full, and when the amount allotted is less than that applied for the surplus will be credited in reduction of the amount payable on allotment, and any excess will be returned to the Applicant.

Copies of the Memorandum and Articles of Association, the Contract with Messrs. Linton, Clarke and Co. for underwriting the issue, and a draft of the proposed Trust Deed to be entered into by the Company (subject to modification), may be seen at the Offices of Messrs. Coward and Hawksley, Sons, and Chance, Mincing Lane, E.C., during business hours while the subscription list is open.

Prospectuses and Application Forms can be obtained from Messrs. Linton, Clarke and Co., Pinners' Hall, London, E.C.; Messrs. Wise, Speke and Co., 28, Collingwood Street, Newcastle-upon-Tyne; or at the Company's Offices, Elswick, Newcastle-upon-Tyne, and 8, Great George Street, Westminster, S.W.

The following is a list of the Directors and Officers of the Company:—

DIRECTORS.

JOHN MEADE FALKNER, Esq., Chairman.

THE MONEY MARKET.

MONEY was fairly plentiful in the early part of week, but later became rather scarcer, owing to considerable revenue payments. Discount business was very quiet, and there was no appreciable change in rates; the reduction in Treasury notes might have been seized on as a bull point by diminishing the market's fear of a higher Bank rate; but fortunately any tendency to rush into bills at low rates which would have been undesirable in view of

the American exchange and the general outlook, was checked by the Prime Minister's grave utterance in the House of Commons on Wednesday with regard to the Russo-Polish position. Yesterday the tendency was firm, money being more keenly wanted.

* * * *

	July 23, 1920.	July 16, 1920.	July 9, 1920.	Previous Rate and Date Changed.
	%	%	%	%
Bank Rate	7	7	7	6 (Apl. 15, '20)
Banks Deposit Rate	5	5	5	4 (Apl. 15, '20)
Discount Houses { Call	5	5	5	4 (Apl. 15, '20)
Discount Houses { Notice	5¼	5¼	5¼	4¼ (Apl. 15, '20)
Treasury Bills, 3 months	6½	6½	6½	5½ (Apl. 15, '20)
Market rate (3 months' bills)	6 5/8	6 9/16	6⅝	..

The Bank return shows unimportant movements. The stock of gold rose by £124,000, and the circulation declined by £139,000, so that the Reserve was £263,000 higher. Government securities declined by nearly three millions, but Other rose by 1½, and Public and Other deposits declined by £1,112,000 and £28,000 respectively.

* * * *

A new and rather puzzling feature was introduced into the currency notes return in connection with the calling in of the earlier issues. Instead of showing "notes cancelled" during the past week, the return now shows notes "cancelled and called in," amounting to a total of 15½ millions, against which new issues have only amounted to seven millions, showing an apparent reduction of 8½ millions. The balance-sheet shows, however, seven odd millions "called in, but not yet cancelled," so that it would appear that out of the 15½ million described as cancelled and called in seven millions were, in fact, not cancelled. That is to say, they are still outstanding, and will have to be exchanged for new ones on presentation. On this interpretation of the returns the circulation of Currency Notes, including notes for £7,148,600 "called in but not yet cancelled," amounts to £360,830,000, a reduction of £1,447,000 on the week. Bank notes and gold in the redemption account are unchanged at £46,800,000, so that the fiduciary issue is £314,030,000, or £6,570,000 below the maximum.

* * * *

The following table shows Public Income and Expenditure for the week ended July 17, 1920 :—

Receipts.	Mln. £		Expenditure.	Mln. £
From Revenue		30·434	Supply Services	8·305
Less—	Mln. £		Interest on Debt	4·189
Reduction of debt	16·935			
Added to Exchequer balances	1·005			
		17·940		
		12·494		12·494

These operations reduced the debt by a sum of £16,934,661, and caused the following changes, which are reflected in our table of National Debt given in another column :—

	Mln. £		Mln. £
Bank of England advances	+ 4·000	Treasury Bills	— 12·645
Treasury Bonds	+ ·340	Advances by Public Departments	— 2·850
National Savings Certificates	+ ·250	Other Debt	— 3·365
		Surrenders of Bonds, &c.	— 1·391
		Depreciation	— 1·000
		Exchequer Bonds	— ·100
		Sundries	— ·174
	+ 4·590		— 21·525

Floating Debt has been reduced by over eleven millions. Property and Income-tax contributed just eight millions to Revenue, and nine millions came in on account of Customs and Excise.

* * * *

The past week has been an unsettled one in the foreign exchange market. The erratic movements in French, American, and Dutch exchange have made operations difficult in anything more than spot settlements, and the marked hesitancy shown by dealers has made both buyers and sellers of foreign money nervous. The sharp fall in American exchange shows that sufficient account had not been taken of the adverse tendency to London so noticeable at this time of the year. During the week the inquiry for dollars has been keen, and the New York rate for sterling is now back to $3.80. The Amsterdam sight exchange for bills on London has followed suit, and the quotation yesterday was barely 11 florins for £1. The Paris cheque rate has moved 2f 65c against France since Wednesday, and the market yesterday was quoting half a franc difference between buying and selling; the mean quotation was 49f 95c. Sterling has been in fair demand for Spain, and for sight bills 24f 15c is quoted. German marks have depreciated to 163 for £1. The Scandinavian centres are all bidding less for bills on London, but business is somewhat restricted. All the Eastern rates are up again, the rise in silver is the cause of the appreciation in the Hongkong dollar to 3s 9d, and the Shanghai tael to 5s 3½d, and to the arrangements for paying off 20 million out of the 70 million yen borrowed from Japan on Treasury bills may be ascribed the rise in the value of the Japanese yen to 2s 7⅝d. Italian lire have depreciated further to 72.

* * * *

EVENTS OF THE WEEK.

JULY 19TH.—Soviet replies to Mr Lloyd George's proposal for an armistice with Poland. Sir Eric Geddes' statement in House on increased railway rates. Sterling exchange on New York down to $3.83\frac{3}{8}$.

JULY 20TH.—M. Millerand reviews French policy at Spa in the Chamber of Deputies.

JULY 21ST.—Mr Lloyd George's statement in the House of Commons on the Spa Conference. Soviet Government announces rejection of Mr Lloyd George's offer.

JULY 22ND.—Debate in House on Irish affairs. Riots in Belfast.

THE BANK FIGURES.

IT is always a fascinating business to try to grope one's way to a meaning of the figures published by our banks, and we need hardly remind our readers that those for the past half-year are of exceptional importance, owing to the change in the currency position that it has witnessed. Speaking at the end of last week at a Mansion House dinner, the Chancellor of the Exchequer pointed out that "since the beginning of the year, when account was taken of the gold transferred from the banks to the Bank of England, the legal tender currency, instead of continuing to increase, had begun to decrease.....The floating debt had been reduced by £60,000,000. What was more important, if possible, all new demands for capital, whether for public or private purposes, had been met out of the savings of the people, and not by a fresh creation of artificial credit.....As a result of some of these things the *Economist* Index Number of prices, which had steadily risen from March last year to April this year, had at last begun to show a tendency to fall" (*Times*, July 16th). Let us pursue the Chancellor's comparative investigation and illustrate it with a few figures in rough millions :—

	Dec. 31, 1919.	June 30, 1920.
Gold in Issue Department	90	117
Bank of England note circulation	91	120
Currency note circulation	356	357
Bank of England total deposits	200	192
Bank of England other deposits	181	176
Treasury bills	1,107	1,050
Ways and Means	243	244

As usual, we have to be very cautious about drawing any inference from the figures, since their real meaning is to a certain extent a matter of guesswork. Thanks to the Bank of England's continuance far into a period of alleged peace of the reticence about its bullion operations which was justified in war-time, we do not know what relation the increase of 27 millions in the gold in its issue department bears to the amount that has been contributed by other banks. It may be more or less. If the two amounts are roughly in agreement, the gold put in by banks seems at first sight to be rather more than balanced by the increased note circulation; but, of course, this is not so, because during the period over 14 millions in Bank notes have been put into the Bradbury reserve, and so are not in "circulation" in the ordinary sense of the word. So that, while 27 millions have come in in gold, only 15 millions have gone out to the banks and the public in notes, plus an increase of a million in currency notes. The decrease thus arrived at in legal tender currency is not great in comparison with the total outstanding, but it is appreciable, and probably quite big enough, since too rapid contraction is not desirable. Moreover, our table also shows a slight decrease in cash at the Bank of England, which the banking world ranks with legal tender for balance-sheet purposes. The "other deposits" were 181 millions on December 31st and 176 millions on June 30th, but how much of this sum belongs to the other banks is not known. Moreover, on both these dates the figure was swollen by huge borrowings from the Bank, and it is probable that window-dressing is more extensive and general at the turn of the year than at the end of June. However this may be, the fact remains of a slight reduction during the half-year of legal tender and of credit with the Bank of England, and the champions of the dear money policy are fully entitled to argue that this check to the expansion of money manufacture has been produced by the rises in Bank rate of last November and April. They may be right, though it may at least be contended that the Government's margin of revenue over expenditure had more to do with the matter. As long as the Government could not pay its way the Bank of England had to help it out by manufacturing money for it, which became the basis of fresh expansion. As soon as this process ceased, one of the chief causes of the expansion of credit was removed, and it could only be continued if the demands of industry on the Bank of England caused it to do for industry what it had hitherto been doing for the Government, or if an addition to our gold stock could be secured, or if the other banks raised a larger fabric of credit on a smaller basis of cash. This, in fact, is what the other banks appear to have been doing, though it is rather surprising to find that this is so, in view of the Chancellor's statement that demands for capital have been met out of the "savings of the people." The tale is not yet complete of the bank balance-sheet dated June 30th, but the figures of the "Big Five" banks are now available, and their aggregate results may be summarised as follows :—

(Million £'s.)

	June 30, 1920.	Compared with Dec. 31, 1919.	Compared with June 30, 1919.
	£	£	£
Paid-up capital	56·6	+ 13·7	+ 15·7
Reserves	44·8	+ 3·7	+ 6·0
Acceptances and endorsements	74·8	— 29·6	+ 20·4
Deposits (including undivided profits)	1,585·1	+ 31·9	+ 72·6
Total	1,761·3	+ 19·7	+ 114·7
Cash in hand and at bank	263·2	— 22·4	— 24·6
Ratio to deposits	16·6 %	— 1·8%	— 2·4 %
Money at call and at short notice	77·4	— 5·4	— 203·9
Investments	330·0	+ 5·3	+ 43·9
Discounts	157·6	— 32·4	— 23·1
Loans and advances	842·9	+ 106·1	+ 297·9
Premises and sundries (including cover for acceptances)	90·2	— 31·5	+ 24·5

A somewhat remarkable feature in this table is the aggregate decrease in acceptances; but the most interesting points, perhaps, are the increase in deposits, the much greater increase in loans and advances, the small increase in investments, and the decreases, first in the cash, and secondly in the assets—money at call and short notice and discounts—which are usually reckoned as most liquid. These movements are comparatively small, but they are not altogether in the direction which is indicated as desirable by the principles on which banking in this country has built up its unparalleled world-wide prestige, and by the needs of the moment which require a check to the fresh manufacture of banking credit, so that goods may increase while credit and currency remain stationary, or are cautiously reduced, and prices may thus be quietly brought down by the wholesomest and least disturbing remedy. The banks, of course, have had a very difficult position to face with their customers, debauched by a period of expansion, clamouring for credit, offering unimpeachable security, and unable to see that their convenience must, at a point, give way before the necessity for the maintenance of a due proportion between cash and liabilities on demand. But the slowness of retail prices to answer the helm of the fall in wholesale commodities seems to indicate that credit is

being used to hold back goods and hold up prices. This is not a process that will help our export trade or smooth the ruffled nerves of the public, which believes that it is being exploited by middlemen. If the public also takes it into its head that the banks are stretching a point to finance the exploiters it will modify its confidence in our banks—the most priceless asset that they possess. The table given above shows a substantial reduction in Treasury bills outstanding, but as long as their amount is so vast it is clear those who are trying to control the manufacture of credit may at any time be defeated by their holders, who by demanding payment can force the Treasury and the Bank of England to make new currency or credit, and so raise the cash proportion of the other banks. Apart from this menace, which clearly calls for some more efficacious remedy than the attempt to issue Treasury bonds, the way back to financial sanity seems to be open as long as the Government pays out no more than it gets in, and the banks cut coats for their customers in due proportion to the amount of cloth in hand.

LIFE ASSURANCE, WITH AND WITHOUT PROPRIETORS.

Life assurance offices divide themselves into two main classes, proprietary and mutual, those, that is, with and without shareholders' capital.

The proprietary offices subdivide themselves into composite companies and purely life offices, those, that is, which transact all sorts of insurance business, including life, and those which restrict themselves to life business. The mutual offices may be subdivided into those which pay commission to agents for the introduction of business, and those which do not. There is no reason why an office should be on a mutual basis to eschew commission payments, but, as a fact, all the proprietary offices do pay commission.

The origin of the proprietary life office was simple enough; when a new life office commences business there is an initial period during which expenses must be high in comparison with the premium and interest income, and when the incidence of a few early death claims would put an impossible strain on the resources unless there were either shareholders' capital or a substantial guarantee fund to fall back upon. It was never very easy to start a mutual office, and it is nowadays more difficult than ever; those, however, which are in existence claim that the absence of proprietors' capital, on which dividends have to be paid out of profits, is an advantage; and so, of course, it is. Proprietary offices reply that they offer to policyholders, over and above all other reserves, the added security of the proprietors' capital. An addition of perhaps half-a-million to the virtual reserves would look very effective indeed if it were expressed in another way. A proprietary office, valuing at 3 per cent., may, with capital behind it of a quarter of a million, be, to all intents, in reality upon a $2\frac{1}{2}$ per cent. basis.

The point seemed very academic a few years ago, for reserves then all looked so ample that it appeared that policyholders in proprietary offices were paying a good deal away annually to secure an additional security which was really redundant. The European war, with its strain upon all reserves, and the deplorable depreciation of securities which is still in progress, have made the point seem anything but academic to-day. Otherwise, it must be admitted that, in pure theory, the mutual office should be able to do better for its policyholders; in practice, what has there been to choose between the best mutual and the best proprietary offices? Has the Commercial Union as a fact done for its policyholders any less than the Scottish Widows' has done? Does the Clerical, Medical, and General fall so far behind the Scottish Provident? Is it not more true to say that in any eclectic list of the half-dozen best offices, you are likely to find mutual and proprietary offices rubbing shoulders?

Dealing now with the sub-division of mutual offices into commission-paying and non-commission-paying groups, there is again, in pure theory, much reason why the office which does not pay for the introduction of business should make more profits for its members than one which does so pay. To some extent the office which does not pay commission, and which advertises very little if at all, is a parasite, if one may say so without offence, for it undoubtedly reaps much benefit from the educational propaganda of the other offices; the active agent and the advertisement draw attention to all life assurance; they create the want, stimulate the curiosity, and form a selling atmosphere. The silent office gets a certain definite benefit from such a campaign, although it does not bear any share in the cost.

But, again, as a fact, have the non-commission paying offices been so pre-eminent? There were formerly four of them, and one, the Clergy Mutual was certainly not successful in the long run, and has had to be absorbed. The Metropolitan is so small as to play an insignificant part; if that were the measure of activity on the part of all offices it would be a bad day for the public, for most men do not assure their lives until they have been subjected to enormous stimulus. The old Equitable and the London Life stand out as two first-class offices; but are they superior to any two of the commission-paying offices one could easily name? And are they not to-day being gradually forced into a policy which, although not technically involving the payment of commission, is in reality the payment of skilled outdoor men, super-agents, to attract and secure business? Are they not forced to advertise a great deal more than is found necessary by offices of similar size, but paying commission? Is there any great difference between the quotation of premium rates which are far below those of many offices, and quoting higher rates which cover and provide for the cost of selling?

Finally, is there much in it between the best in each group, and is not one as likely as the other to provide a good candidate for any eclectic list? Then we come to the question of the purely life office, whether proprietary or mutual, and the great insurance house in which the life branch is only one department. There are many good reasons why the Phœnix, the Atlas, the Royal Exchange, or the London Assurance Corporation, should carry on life business with less expense, and therefore with more profit to policyholders, than, say, the Scottish Amicable, the Equity and Law, the Norwich Union, or the United Kingdom. But have they done so? What has there been to choose between them over a long number of years? Indeed, the purely life office in the past has seemed to have the best of it, due possibly to the fact that in the composite offices it is the dividend-providing portions of the business that tend to absorb the attention of directors and managers.

But there is a change, a very significant change, in recent history, due to the exceptional strain of war conditions. We have seen the life department of one or two composite offices enabled to divide a bonus amongst policyholders just because it was to the interest of the directors, in view of the general reputation of the office as a whole, to help their poorer brother over the stile. The depreciation of the life funds has been met out of the general fund, and a bonus to life policyholders has been thereby rendered possible. Shareholders may, nay will, and have, grumbled; and it is not likely that such altruism would be repeated often; but, as an exceptional step to meet exceptional circumstances, directors will be able to justify it as a defence of the goodwill.

As a point in the comparison between the purely life office and the composite office with a life branch, there is no question but that such events give a new turn to the balance. Until the proprietors of a purely life office in temporarily low water make some capital sacrifice to meet exceptional depreciation, and so render possible a bonus declaration to policyholders, otherwise impossible, this is a canvassing argument with which their outdoor representatives will have some difficulty in dealing. In this connection it must not be forgotten that it is not an unknown thing for a composite office to favour the life branch by a limitation of expenses, all expenses over and above a certain figure being borne by the general fund, that is, by the shareholders; that is no small advantage, under present conditions, to the policyholders, and, until one hears of the proprietors of a purely life office making a similar sacrifice of dividend in order to relieve policyholders of the incubus of increased expenses, it is yet another point in favour of the composite office.

The Liberty National Bank
of New York

Accepts deposits drawing interest from foreign banks, firms and individuals.

SUGAR.

Lord Brougham, in his "Historical Sketches of Statesmen," relates the following anecdote of the elder Pitt, when he dominated the House of Commons. He began a speech with the words, "Sugar, Mr Speaker," and then, observing a smile to pervade the audience, he paused, looked fiercely around, and with a loud voice, rising in its notes and swelling into vehement anger, he repeated the word "Sugar!" three times; and having thus quelled the House, and extinguished every appearance of levity or laughter, turned round and disdainfully asked, "Who will laugh at sugar now?" Nearly a hundred years later Disraeli wrote, in his "Life of Bentinck": "Sugar has been embarrassing, if not fatal, to many Governments. Strange that a manufacture which charms infancy and soothes old age should so frequently occasion political disaster!" It is alleged that the United States have half-a-million tons of sugar in hand above last year's consumption, yet refiners still hope to run up retail prices. After having been put on very short rations of sugar during the war, the consumers in the United Kingdom have had the retail price of their weekly half-pound raised from 5d to 7d, and are told that it may be necessary to increase this high price. Nowadays no one in the House of Commons takes the trouble to elucidate facts which are ascertainable from a study of Government returns as to the justification of the severe limitation in the quantity or of the abnormal rise in price. The following tables should prove useful for those who, whether in Parliament or not, are convinced that a thorough investigation should be made, with the object, if possible, of increasing our rations and of lowering their price. The following table shows the quantity (in thousand cwts) of sugar remaining in the bonded warehouses or entered to be warehoused on the last day of December:—

1913.	1914.	1915.	1916.	1917.	1918.	1919.	Average of Five War Years.
4,702	8,286	2,714	2,161	3,935	7,655	5,963	4,950

It is interesting to observe that at the end of 1914 there was an amount of sugar in the bonded warehouses about 70 per cent. in excess of the amount at the end of 1913, and that, although this accumulation was greatly reduced in the next two years, it had doubtless been used to supply our forces abroad, and possibly some of our Allies. But at the end of 1918 the quantity in bond had again risen far above the quantity bonded in 1913; and again at the end of last year the amount was 25 per cent. higher than in 1913. If, as was the case, the amount of sugar in 1913 was sufficient for our ordinary needs, and the average amount bonded at the end of the five war years showed in excess of that bonded at the end of 1913, we are justified in asking where the sugar was disposed of, and whether it was largely wasted in the extravagant manufacture of chocolate and other sweetmeats. The next table shows our imports of sugar:—

	Imports.	Decrease from 1913.	Per Cent.	Values of Imports.	Increase upon 1913.	Per Cent.	Price per Ton.
	Tons.	Tons.		£	£		£
1913	1,969,300	..	..	23,067,000	..	..	11·7
1914	1,993,000	..	..	32,118,000	..	..	16·1
1915	1,482,100	487,100	24·7	31,833,000	8,766,000	38 0	21·5
1916	1,533,400	435,900	22·1	37,368 000	14,301,000	62·0	24·4
1917	1,387,500	581.700	29·5	36,710,000	13,643,000	59·1	26·4
1918	1,305,600	663,600	33·7	34,411,000	11,344,000	49 2	26·5
1919	1,597,500	371,800	18·8	53,962,000	30,895,000	134·0	33 8
Average	1,609,800	..	..	35,638,000	..	..	22·9

The table* shows that the average import of sugar during the seven years only fell by 359,000 cwts, or 18 per cent., from the quantity that we imported in 1913, the last normal year, although during the war years the decrease ranged from 22.1 per cent. in 1916 to 33.7 per cent. in 1918. The additional amount imported in 1914 accounted to a slight extent for the great increase in the bonded warehouses at the end of that year, but the chief reason was due to the system of rigid control over sugar introduced upon the commencement of hostilities. The table also shows that the price per ton of the imports of sugar rose *immediately* upon the outbreak, the average price for 1914 being almost 50 per cent. higher than that of 1913. The purchase of sugar by our Sugar Control Board was no doubt of a somewhat panicky character, and led to an unexpected increase in world prices, accentuated by our refusal to purchase the supplies of enemy-grown sugar. These supplies, of course, were disposed of to neutral countries, who sold to us, at greatly advanced prices, the sugar they obtained from other sources. The average value of our imports during the seven years rose by £12,571,000 upon the value of 1913, an increase equal to 54·5 per cent. The price per ton rose from £11.7 in 1913 to £33.8 in 1919, or nearly 200 per cent. The table shows the gradual rise from 1915 of 38 per cent. in that year, 62 per cent. in 1916, 59.1 per cent. in 1917, 49.2 in 1918, and, to our surprise, to 134 per cent. in 1919, when we might reasonably have hoped for a fall in the prices.

Table Showing our Chief Sources of Supply of Sugar Before and During the War.

Imports by U.K. from (in cwts)—	Average Imported from 1909 to 1912.	Quantity (in cwts) Imported. 1913.	1919.	Average Imported from 1913 to 1919.

Brazil	626 000	103,000	145.000	275 000

* Based upon the figures given in the December numbers of the Trade and Navigation Returns for 1915, 1918, and 1919.

In the table (based on figures given in Volume II. of Annual Statement of Trade of United Kingdom, 1913) all the chief sugar-producing countries of the world are included except British India, the largest producer of all; but India consumes more sugar than it produces. The average amount imported from India (under the influence of high prices) by the United Kingdom from 1913 to 1919 was 102,000 cwts. The chief feature of the table is seen in the great dependence of the United Kingdom before the war upon Germany and Austria-Hungary, which countries supplied us with an average amount of 17½ million cwts from 1909 to 1912, and with 25½ million cwts in 1913, or more than half the amount of our annual consumption. Last year Germany was unable to harvest more than three-fourths of the sugar beet that she grew. If the present harvest is better, and better harvested, there is some hope that we may, with others, benefit. Much may be hoped for from Russia, when peace really returns to that distressful country. Cuba has very largely increased her growth of the cane, and Java, Mauritius, and the British West Indies and Guiana should continue largely to contribute to our needs. But a stringent investigation should be made into the disposal of the supplies that we import. The only re-exports of sugar that exceeded a quarter of a million cwts since 1901 were 384,293 cwts in 1908, 413,234 cwts in 1910, 263,708 cwts in 1912. A final table completes our synopsis of the sugar question. It should be borne in mind that the value of our imports of sugar in 1919 (£54,000,000) placed it third on the list of our imports of food, meat, wheat, and flour alone exceeding it in value.

TABLE Showing the AVERAGE ANNUAL PRODUCTION of SUGAR for th FIVE YEARS, 1909-10 to 1913-14.

Production in 1,000 Tons.		Production in 1,000 Tons.		Production in 1,000 Tons.	
British India	2,328	United States	825	Netherlands	242
Germany	2,258	France	547	B.W. Indies and Bh. Guiana	205
Cuba	2,022	Hawaii	504	Mauritius	201
Russia	1,739	Hungary	421	Australia	199
Dutch East Indies	1,313	Porto Rico	319	Italy	196
Austria	1,033	Belgium	267	Formosa	178
		Brazil	257	Philippines	172
				Argentina	165

With the limited ration of sugar much good fruit will be wasted. Home-made jams will become rare. In the meantime the manufacturers of costly sweetmeats continue to supply bountifully the requirements of their well-to-do customers.

RAILWAY FARES.

AT first sight it may seem that there is much justification for the present agitation as to the increase in fares, absolutely necessary to meet the growing deficit on the railways. It is directed against the change being made during August, when so many take their holiday for which plans have already been made. A certain class, mostly those employed in offices and shops, especially if they have families, long ago made their holiday plans, secured their rooms, and budgeted for these to cost a certain sum, for which, week by week probably, they have been making provision. For a party of four the railway fares to Somerset, Dorset or North Devon would be to-day about £10 or £12. For this to be increased by about £4 is a serious matter at this late hour. To meet the difficulty it is suggested that the increase be dated from September 1st, as was the expectation of the railway companies when they furnished the Rates Advisory Committee with the details of what was wanted to meet the deficit, which, it is estimated, will be, as from the beginning of the present financial year to the end of July, 1921, 54½ millions. On the other hand, it must be remembered that August is, as regards passenger traffic, the best paying month of the year. The latest White Paper on the subject—Cmd. 815, "Railway Working"—shows that out of 106½ millions received from passenger traffic during the financial year 1919-20, 12 millions were produced in August and 9 millions in September. It is obvious, therefore, that if the increase is to begin on September 1st the ratio, to realise 54½ millions in ten months, must be much greater than for eleven, especially when the omitted month brings in one-ninth of the whole income. Another point is that, when all is said and done, the higher cost of railway fares forms a very small percentage of the universally increased charges met with at every stage of a holiday, and why penalise those who cannot get away in August and all who have to travel during the next twelve months?

An important point to be remembered is that the 54½ millions must be raised before the Government control ceases; otherwise the companies will be taking over a responsibility which should have been cleared off before the railways were handed back. As to the "swollen revenue" that some of our contemporaries are already talking about for the railway companies if the deficit is wiped off, it seems to be forgotten that "the intention of the Government is that in June, 1921, the rates, fares and charges then in force shall be reviewed with a view to their reduction if circumstances permit." The Government has chiefly itself to thank for the present outcry, because it did not move earlier towards equalising the railway charges to fit the cost of working. But a versatile Press which runs Government economy as the "stunt" of one week and holiday travel at the expense of the taxpayer as that of the next, and a public which wants to travel cheap out of taxes which it objects to paying, combine to fill in the details of a somewhat ridiculous picture.

It is generally overlooked that an increase in fares is only one of several questions that the Rates Advisory Committee has before it. It has to consider three references. The first relates to a general revision of rates, fares, dues, tolls and other charges; the second to workmen's fares and other fares lower than the ordinary; and the third, on which the present hearing is based, has to find the 54½ millions further increased cost. The so-called "holiday tax" is, therefore, only one of the many burdens that will shortly be thrust upon us if the railways are to be self-supporting. But where are the economies that Sir Eric Geddes promised?

NITRATE POSITION AND RESULTS.

THE reports and accounts covering the year 1919 have recently appeared of a number of Chilean nitrate companies. Most of the accounts of the year's operations make very gloomy reading, and illustrate the fact that the year 1919 was a thoroughly bad period for nitrate producers. The war demand for the commodity for purposes of explosive manufacture had ceased, and contracts by certain warring Governments had been cancelled. Meanwhile the resumption of demand for agriculture was everywhere delayed by the long postponement of actual peace, and the consequent tardiness of peace reconstruction. In addition, shipping tonnage available for export was scanty. Sales, therefore, were small in volume; enormous stocks accumulated, and prices at which sales were effected were low, 10s 6d per quintal being the basis, of which 100,000 tons were sold as late as December last. The combination of these adverse influences sufficiently explain the results set out in the following table :—

	Net Profits.		Ordinary Dividend.		Reserve, Deb. Redemption, &c.		Carried Forward.	
	918.	1919.	1918.	1919.	1918.	1919.	1918.	1919.

Santa Rita	8,970	5,308	5,000 (5 %)	5,000 (5 %)	..	..	5,202	308

* Period ended September 30th.

For a considerable portion of the year many oficinas were almost entirely idle. The only company in the above list which can look back on the year with satisfaction is the Anglo-Chilian, which, of course, does not depend for its revenue entirely on nitrate production. Even here the comparative figures in the above table are deceptive, for profits are struck after payment of income-tax, which absorbed £124,340 in 1918, against only £57,987 last year. Gross profits were, in fact, over £25,000 higher

in the former year. In view of the bad conditions, appropriations to reserve may seem low, but it must be remembered that by the time the balance-sheets were being compiled a brighter prospect was opening before the industry.

The balance-sheet positions of the various companies are analysed below :—

LIABILITIES.

	Share Capital.	Debentures and Loans.	Creditors.	Bills Payable.	Reserves.	Profit and Loss.
	£	£	£	£	£	£
Angela	70,000	..	31,711	7,000	30,000	9,174

Santa Rita	101,824	86,460	1,610	..	9,360

Some of the companies show considerable increase in stocks during the year, Lautaro being particularly noticeable in this respect.

Nitrate shareholders are less interested in 1919 results, which were due to a concatenation of exceptional circumstances, than in the prospects of 1920 profits. In the new year conditions quickly began to improve, and successive sales showed higher quotations. Messrs W. Montgomery and Co., in their half-yearly report dated June 30th, write :—"Up to a few days ago 1,030,000 tons had been disposed of at an average price of 16s 8½d per quintal." European demand has been hampered by the inability of some countries to afford to buy as much nitrate as their agriculture requires, but American demand has exceeded expectations since the Armistice. Exports from Chili in the first six months of 1920, both to Europe and to America, are very much heavier than in 1919. Messrs Montgomery and Co. give the following figures :—

Exports to—	First Half of— 1919. Tons.		1920. Tons.
Europe and Egypt	60,000	....	600,500
United States	117,000	....	816,000
Other ports	57,000	....	161,000
	234,000	....	1,578,000

The continued existence of the Nitrate Producers' Association has proved very beneficial to producers. The decline in stocks in Chile and the statistical position of the industry in general is given as follows by Mr Thomson Aikman, Jun. :—

	1913.	1914.	1919.	1920.
Deliveries in Europe and Egypt for six months ending June 30	Tons. 1,323,000	Tons. 1,494,000	Tons. 453,000	Tons. 65[illegible],000
Deliveries in United States for six months ending June 30	347,000	295,000	425,000	713,000
Deliveries in other countries for six months ending June 30	45,000	47,000	67,000	175,000
Shipments to Europe and Egypt for six months ending June 30	802,000	831,000	62,000	600,000
Shipments to United States for six months ending June 30	378,000	310,000	116,000	848,000
Shipments to other countries for six months ending June 30	40,000	41,000	57,000	142,000
Production in Chili for six months ending June 30	1,363,000	1,455,000	900,000	1,182,000
Stocks in Chili at June 30	608,000	754,000	1,490,000	1,170,000
Total supply in sight at June 30	1,139,000	1,265,000	1,735,000	†1,814,000

† Estimating production in June at 200,000 tons, and shipments at 70,000 tons to Europe, 120,000 tons to U.S.A., and 10,000 tons to other countries.

During the days of Stock Exchange activity in January and February nitrate share quotations responded vigorously to the brighter outlook. A relapse followed, and support was renewed in June. Our last table gives dividends, prices, and yields at the end of June, 1915, in July, 1919, and July, 1920.

PRICES, DIVIDENDS, and YIELDS.

Company.	Share.	End of June, 1915. Price.	Div.	Yield.	July 24, 1919. Price.	Div.	Yield.	July 22, 1920. Price.	Div.	Yield.
	£		%	%		%	%		%	%
Angela	1	1⅛	nil	nil	1 15/16	30	15 3/16	2 5/16	10	4 5/16
Anglo-Chilian	5	16½	25	7 9/16	14	15	5	15½	15	4 13/16
Lagunas	5	1 1/16	2	9⅜	1¼	2	8	1½x	2	8
Lautaro	5	7	10	7⅛	7½	18	9	14½	16	5½
New Paccha	1	3 5/32	nil	nil	2⅜	10	4¼	3½	5	1 9/16
Rosario	5	7	7½	5⅜	6¾	15	11⅛	9½	10	5¼
Salar del Carmen	1	2	5	2½	2⅛	20	9⅜	3x	5	1 11/16
San Lorenzo	1	..	25	..	3	25	8⅓	3½	nil	nil

Santa Rita	1	31/32	nil	nil	15/16x	5	5	1⅞	5	2 11/16

In every case prices are still appreciably below the highest level of the year.

HARRISONS & CROSFIELD, LIMITED.

ISSUED CAPITAL .... £1,837,966.

1-4, Great Tower Street, London, E.C.3.

With Branches and Affiliated Companies in

Australia	China	Java	New Zealand
Borneo	India	Malaya	Sumatra
Canada	Japan	Morocco	U.S.A.
Ceylon			

The Company acts as Agents for the storage, shipment and sale of produce.

Business Notes.

The Quarter's Shipbuilding. — Lloyd's Register shipbuilding returns for the quarter ended June 30, 1920, show that the merchant tonnage building in the United Kingdom at the end of June, 1920, viz., 3,578,153 tons, has increased by 184,000 tons, as compared with March, 1920, and is 1,054,000 tons more than the work in hand 12 months ago. The largest increase has taken place on the Clyde, where there are now 1,260,777 tons under construction. The total "commenced" during the quarter amounts to 588,604 tons, and includes many large vessels. There are now building 223 vessels of 6,000 tons and upwards, as compared with 210 at the end of March. The vessels of 10,000 tons and upwards amount to 63. The output during the quarter shows an increase of about 69,000 tons as compared with that of the previous quarter. The total merchant tonnage building abroad—4,142,751 tons—is about 405,000 tons lower than the total building at the end of March; this is due to the large decrease in the tonnage building in the United States—467,000 tons less than at the end of March. An enormous decrease has taken place in the tonnage under construction in the United States during the last 15 months. At the end of March, 1919, 4,185,523 tons were actually building in that country, which total by the end of June, 1920, has been practically reduced by half, while in the United Kingdom during the same period the figures have increased from 2,254,845 tons to the present record total of 3,578,153 tons, an increase of nearly 60 per cent. The figures for the British Dominions are about 36,000 tons, and those for Holland 32,000 tons higher than at the end of March, while in Japan there is a decrease of 31,000 tons. The world's total—7,720,904 tons—is about 221,000 tons lower than the figures for March, and 328,000 tons lower than the "record" figures reached at the end of September, 1919. The following figures showing the merchant tonnage building in the world six years ago—namely, at the end of June, 1914—are of interest for comparison with the present totals :—Building in the United Kingdom, 1,722,124 tons; building abroad, 1,440,766 tons; total for the world, 3,162,890 tons, of which 1,865,337 tons were

building under the supervision of Lloyd's Register. As compared with the present totals, the United Kingdom tonnage is 1,856,029 tons higher, the tonnage building abroad shows an increase of 2,701,985 tons, and the total tonnage building under the supervision of Lloyd's Register has increased by 164 per cent.

British Industries Fairs.—The President of the Board of Trade has appointed a Committee, consisting of Sir Frank Warner (chairman), Mr W. A. Anderson, Mr P. W. L. Ashley, Sir W. H. Clark, Mr J. W. Murray, Mr G. C. Vyle, and Major F. H. Wedgwood, to consider the best policy to be adopted in future as regards British Industries Fairs. Mr A. G. Chuter, of the Department of Overseas Trade, has been appointed secretary.

Crop Variations.—A correspondent writes:—"I do not know if, in discussing the world's wheat production, any writer has dwelt upon the desirability of encouraging such culture in the countries which show the least tendency to variation in seasonal results. Not only do extremely diverse yields per acre spell great loss of human energy in the actual agricultural labour, but the violent "swing of the pendulum" in the matter of total production from year to year is the main cause of speculation and excited markets, themselves the cause of an unsettled agriculture. At present, on an average of 50 years in Europe and 25 elsewhere, wheat yields show the following scale of variation:—England, 26 to 36 bushels; India, 8 to 12; France, 16 to 24; U.S.A., 10 to 16; Argentina, 8 to 16; Canada, 10 to 22; and Australia, 4 to 16, figures which may be reduced to variation figures as follow:—England, 14; India and France, 15; U.S.A., 16; Argentina, 20; Canada, 22; and Australia, 40. While these comparisons seem to suggest that two English colonies are the great disturbers of a wheat trade equilibrium, there is the more agreeable conclusion that for England and France to increase their wheat areas would stabilise values, as well as reduce the present wasteful outlay on importation, often from remote countries."

The Dye Industry.—Considerable interest has been taken this week in the textile trades of the North of England, writes our Manchester correspondent, in the statement of Sir Robert Horne, the President of the Board of Trade, in reply to an inquiry that the Government has considered various methods of fostering the dye industry, and it has been decided that assistance can be most effectively given by the prohibition of the importation of synthetic dyestuffs except under licence. An undertaking has been given to the industry that this course will be adopted, and accordingly proposals to that effect are to be embodied in a Bill relating to key industries, which will be introduced in Parliament and proceeded with as soon as possible. There is much difference of opinion in trade circles as to whether this policy is likely to be effective, and there are many people who believe that a system of free trade would in the long run be more advantageous to industries which depend upon supplies of dyes. At the first annual meeting of the Colour Users' Association, held in Manchester this week, Mr Vernon Clay, the chairman of the Reconstruction Committee of the Association, said there were different ways of establishing the industry. We might endeavour to protect it by tariffs, but tariffs to-day were practically impossible, because of the fluctuating exchange. A tariff could not be fixed that could operate with advantage to the industry, and the Government had stated definitely that a subsidy was unworkable. The decision of the Government to bring in a Licensing and Prohibition Bill would probably mean that the Association would have to alter its constitution, and instead of being an advisory body, they would have to become an organisation capable of entering into obligations. It was pointed out at the meeting that in accordance with the reparation clauses of the Peace Treaty, Great Britain should have received 3,300 tons of dyes from Germany, out of the stocks existing in August, 1919, of 22,000 tons. Up to the present the consignments did not amount to more than 1,500 tons, and it was doubtful whether all that had actually been received.

Employment in June.—The July number of the *Labour Gazette* shows a slight increase in the unemployment percentage in June, as compared with May, but the figure is well below that recorded for June of last year. The monthly movement of the percentage of unemployed since the beginning of 1913 is shown below:—

End of—	1913. %	1916. %	1917. %	1918. %	1919. %	1920. %
January	2·2	0·6	0·3	1·0	2·4	2·9
February	2·0	0·5	0·3	0·9	2·8	1·6
March	1·9	0·5	0·3	1·2	2·9	1·1
April	1·7	0·5	0·3	0·9	2·8	0·9
May	1·9	0·5	0·4	0·9	2·1	1·1
June	1·9	0·5	0·4	0·7	1·7	1·2
July	1·9	0·4	0·4	0·6	2·0	..
August	2·0	0·4	0·5	0·5	2·2	..
September	2·3	0·4	1·3	0·5	1·6	..
October	2·2	0·3	1·1	0·4	2·6	..
November	2·0	0·3	1·1	0·5	2·9	..
December	2·6	0·3	1·4	1·2	3·2	..

While employment continued at a high level in most of the principal industries, there was still a depression in the leather and boot and shoe trades; the cotton weaving industry continued slack owing to the decline in the Eastern market, and the linen trade, particularly in Ireland, still suffered from lack of raw material. Changes in rates of wages coming into operation in June resulted in a total increase of nearly £570,000 in the weekly wages of over 2,600,000 workpeople. The principal classes affected were railway servants, engineers and shipbuilders, woollen and worsted operatives, and workers in the printing and bookbinding trades. Changes of hours of labour affected nearly 8,000 workpeople, for whom there was an average decrease of nearly 4½ hours in the normal working week.

The Cost of Living.—A further rise of 2 per cent. is shown in the *Labour Gazette's* calculation of retail prices, and of the general level of all items of necessary working-class family expenditure. On July 1st the increase in retail prices of food alone as compared with July, 1914, is calculated at 158 per cent., and in the general cost of living at 152 per cent. The table below shows the monthly increases since the beginning of 1915:—

AVERAGE PERCENTAGE INCREASE since JULY, 1914. ALL ITEMS.
(Food, Rent, Clothing, Fuel, and Light, &c.)

Month (beginning of).	1915.	1916.	1917.	1918.	1919.	1920.
January	10-15	35	65	85-90	120	125
February	15	35	65-70	90	120	130
March	15-20	35-40	70	90	115	130
April	15-20	35-40	70-75	90-95	110	132
May	20	40-45	75	95-100	105	141
June	25	45	75-80	100	105	150
July	25	45-50	80	100-105	105-110	152
August	25	45-50	80	110	115	..
September	25	50	80-85	110	115	..
October	30	50-55	75-80	115-120	120	..
November	30-35	60	85	120-125	125	..
December	35	65	85	120	125	..

There was a seasonal increase in the price of potatoes and of eggs, but butter, tea, and margarine were cheaper on July 1st than on June 1st.

Coal Output. — Provisional figures of the production of coal for the week ended July 10th show an output of 4,676,300 tons, as compared with 4,734,700 in the previous week. The weekly figures since January 1st are set out below:—

1920.	Tons.	1920.	Tons.
January 3	3,494,712	April 10	3,337,793
January 10	4,540,723	April 17	4,833,072
January 17	4,902,906	April 24	4,989,666
January 24	4,851,551	May 1	4,564,564
January 31	4,866.066	May 8	4,674,302
February 7	4,846,167	May 15	4,860,668
February 14	4,897,311	May 22	4,830,707

In the past 52 weeks the total production was 230 million tons, giving an average of less than 4½ million tons per week.

THE IRVING method of tracing an import shipment from the hour the draft or other advice is received, of notifying the consignee of its arrival and presenting the draft by personal messenger in Manhattan, and elsewhere by a banking correspondent on the spot, insures the over-seas shipper or banking correspondent a prompt credit or an immediate report on how the business stands—with effective aid in meeting any emergency which may arise. Operating speed is a vital element in Irving specialized service.

IRVING NATIONAL BANK
WOOLWORTH BUILDING, NEW YORK

LONDON OFFICE: PINNER'S HALL, OLD BROAD STREET

Railway Statistics.—Figures for the four weeks ended May 23rd show an increase in the tonnage carried by the railways of Great Britain of 2,565,400 tons, or 10.3 per cent., as compared with the previous four weeks, and a decrease of 532,400 tons, or 1.9 per cent., as compared with the four weeks ended March 28th. The detailed analysis of traffics conveyed covers 90 per cent. of the total tonnage. The figures for the preceding four weeks were affected by the Easter holidays, but allowing for this factor, the tonnage of iron and steel, ironstone and iron ore, roadstone, and bricks has appreciably increased. The operating results show an improvement, the average train-load having increased from 132.69 to 135.35 tons, the train miles per engine hour from 3.19 to 3.22, and the ton miles per engine hour from 424 to 436.

Supplementary Estimates. — A White Paper (No. 148, price 4d net) sets out the details of a supplementary estimate of £18,146,858 for the Civil Services and Revenue Departments. The Budget estimate, it will be remembered, allowed £20,000,000 for supplementary civil service estimates. Thus the new demand falls within this margin; but with the financial year not yet four months old the margin is nearly exhausted. The chief headings under which the additional money is required are :—War Bonus, £9,500,000; Scottish Fishery Board, £1,798,875; Post Office, £1,627,000; Colonial Services, £1,581,139; Royal Irish Constabulary, £1,268,361. A footnote explains that "further payments in respect of War Bonus, &c., estimated at £1,365,000, are being met from savings anticipated on original departmental estimates."

Government Cotton Trade Commission.—A certain amount of interest has been taken in Lancashire cotton trade circles this week in the proposal of the operatives that the Government should be asked to appoint a Commission to inquire into the general standing and position of the industry. It is understood that the workpeople have an idea of an investigation being made on similar lines to that held in connection with the coal industry several months ago. At the annual meeting of the United Textile Factory Workers' Association, to be held at Blackpool next week, the Legislative Council will submit a proposal asking for a Royal Commission for the purpose of inquiring into the position of, and conditions prevailing in, the cotton trade, and in particular as to (*a*) the hours of work in the various grades of cotton workers, and whether, and if so to what extent, and by what method, such hours should be reduced, regard being had to a reasonable standard of living amongst cotton workers, and to the effect of such reduction in the hours of labour on the economic life of cotton workers and the country. (*b*) The cost of production and distribution in the cotton industry or any industry commonly carried on in connection therewith, or incidental thereto. (*c*) Capital invested; selling prices and profits in the cotton industry, or any industry commonly carried on in connection therewith or incidental thereto. (*d*) The social conditions under which cotton workers follow their employment. (*e*) The effect of proposal under the above heads upon the development of the cotton trade. The annual report states that the commission, if appointed, must have full power and authority to call witnesses and to inspect documents, and unless it possesses such authority the inquiry would be useless and ineffective. It must be said that the raising of this question is not being taken very seriously by the employers, and it is not likely that the proposal of the workpeople will meet with any encouragement from the Government.

Home Railway Dividends.—The list of Home Railway dividends so far declared has little of interest, and the announcements have utterly failed to stir the market from its listlessness. The midsummer declarations for the past five years are shown below :—

Name.	Mid-summer, 1916.	Mid-summer, 1917.	Mid-summer, 1918.	Mid-summer, 1919.	Mid-summer, 1920.
	Rates per Cent. per Annum.				
Great Central, 1881	4	4	4	4	..
Do 1889	4	4	4	4	..
Great Eastern	½	½	1	1	1
Great Northern, pf. ord.	4	4	4	4	4
Do Cons. 6 % "B" ..	6	6	6	4	6
Lancashire & Yorkshire	3¼	3¼	3¼	3¼	3¼
Liverpool Overhead	2½	2½	2½	2½	2½
London and N.-Western	5	5	5½	5½	..
London & South-Western	4	4	4	4	4
London, Brighton.....	2¼	2¼	2½	2½	..
London, Chatham, Arb.pf.	4	4	4	4½	4½
Maryport and Carlisle ..	5	5	5	5	5
Metropolitan	1	1	1	1	1
Midland, def.	3	3	3¼	3¼	4
North-Eastern Cons....	5½	5½	6	6½	6½
North London	4	4	4½	4½	..
North Staffordshire	3½	3½	3½	3½	3½
South-Eastern, ord.	1	1	1½	2	2
Taff Vale.....	3½	3½	3¾	4	4

The only changes are shown by the Midland, the rate having been raised from 3¼ to 4 per cent., in order to "lessen the difference between the August and February payments," and by the Great Northern, which restores the rate on the "B" stock to the level of two years ago.

Rubber-seed Oil.—Although the possibility of obtaining large quantities of vegetable oil from the seeds of Hevea or the Para rubber tree has often been considered during the last twenty years, owners of rubber plantations have

not so far waxed very enthusiastic in the matter. Before the war the price obtained for the seed or the extracted oil was not sufficiently remunerative to be of interest to the rubber grower. Since the war conditions in the oils and oilseeds trade have, of course, changed considerably, and it may be worth while to once more review the possibilities of rubber seed oil in the light of these new conditions. The total area under rubber may be taken as approximately 2,000,000 acres, and of this about one-half contains trees of the right variety and age to yield appreciable quantities of seed. They are mostly in the Malay Peninsular, but there are also large plantations in Burma, South India, Ceylon, British North Borneo, Dutch East Indies, Cochin China, and New Guinea. Assuming that about one ton of seed can be collected from 5½ acres —although it is probably not always so good as this— the total possible yield of seed will be nearly 200,000 tons. The Para rubber tree begins to bear seed in its fourth year, and attains its maximum seed-bearing capacity in its eighth year. The seed consists roughly of 50 per cent. shell or husk, and 50 per cent. kernel. The oil is entirely contained in the kernel to the extent of 40-50 per cent., so that the oil content of the whole rubber seed may be taken as 20-25 per cent. Taking the lower percentage, and also allowing for loss in extraction, the total yield of oil from the 1,000,000 acres would be in the neighbourhood of 40,000 tons. This is quite a substantial quantity, and worth saving if possible. The oil is very similar to linseed oil, and its value is sometimes estimated as not less than two-thirds that of linseed oil, but actually sales have taken place recently at prices closely approximating linseed oil. Prices of linseed oil are now at about £75 10s per ton. If rubber seed oil only fetches £60 per ton, the total value would be £2,400,000. Although very similar to linseed oil, it dries more slowly than that oil, and to this extent is less suitable for paints and varnish; and up to the present it has not been found quite satisfactory for the manufacture of linoleum. It would, however, do very well for soap making, and probably also in the manufacture of rubber substitutes, although this latter is perhaps hardly a line that the rubber growers would wish to encourage. When subjected to the comparatively new process of fat-hardening, or hydrogenation, it could be used for the manufacture of edible fats, and it is in this direction that its best prospects may be found, for those engaged in the fat-hardening industry and the manufacture of edible fats can obviously afford to pay higher prices than other oil users. But in any case, before rubber seed oil can take its place as an appreciable factor it must be obtainable regularly in large quantities. From the point of view of the rubber growers, numerous problems have to be considered before the utilisation of rubber seed can be seriously taken up, *e.g.*, cost of collection, which, in most cases, is fairly heavy; transport; manufacture of oil on the spot versus export of seed to oil mills in other countries; machinery for decorticating or shelling the seed; disposal of the residual cake or meal. This latter has been tested in numerous cattle-feeding experiments and found to be a valuable cattle food, quite comparable with linseed cake or even cotton cake. These and other problems have been frequently discussed in the *F.M.S. Agricultural Bulletin, The Journal of Agricultural Science, The Bulletin of the Imperial Institute,* and other journals during the past few years. A very useful review of the whole subject is given in the *Bulletin of the Imperial Institute,* Vol. XVII., Part 4, 1919, just issued, with a very full discussion of costs and prospects.

The Finances of Greece.—The Greek Budget statement for 1920-21, of which the full text is now available, is admittedly more conjectural than is usual with Budgets, and is also decidedly—and, perhaps, justifiably—optimistic. It is conjectural chiefly because, as the Finance Minister points out, economic and social conditions are changing everywhere, and more especially in Greece, whose territory and population are about to be definitely increased by one-half; the Army must still be kept on a war footing, and the population of the new territories is increasing, through the return of the refugees from the old kingdom and the advent of others from Asia. The total receipts, however, are estimated at 1,033,579,740 drs., of which 306,558,000 are from taxation, 88,452,000 from monopolies and stamps, 10,000,000 (extraordinary) from a tax on war profits, and 472,500,000 from loans. The total estimated expenditure is 1,298,759,754 drs., of which 532,115,487 drs. is war expenditure, including allowances to dependents and refugees, administration of Asia Minor, and "reconstruction" of the agriculture and communications of Eastern Macedonia, and these items, with the "extraordinary" war expenditure, considerably exceed the amount borrowed. Civil administration and the service of the Debt account for 766,644,267 drs., but of this 157,390,822 drs. is devoted either to paying off debt or to special loans to the Hellenic Railway Company and to peasants taking up expropriated land. The Public Debt stands at 3,282,986,597 drs.—a net increase of 315,109,178 drs. for the year. M. Negroponte refers with pride to the recent payment of the coupons of the older External Loans at par, and predicts a largely increased yield in the near future from the taxes on income, tobacco, and spirits, and from stamps; he points out that 30,850,000 drs. is to be spent on Eastern Macedonia, but no revenue from it is included in the Estimates, and he gives reasons for believing that the taxable capacity of the Greek people is well above the present demands on it. He closes with an eloquent appeal to the nation to save, to avoid extravagance, and to work.

Conditions in Roumania.—A report on Economic Conditions and Prospects of Roumania at the close of the year 1919 (Cmd. 828, 9d net), by Mr Alexander Adams, Commercial Secretary to the British Legation at Bucarest, draws special attention to the great possibilities of the country as a market for British goods. The report with appendices runs to 53 pages, and is well worth the study of British exporters. The national finances are in a far from satisfactory state, but Mr Adams remarks that "the prospect is not at all so depressing as at first sight it may seem." Existing taxation is to be increased in the next Budget with a view to bringing revenue and expenditure into closer relation. The public debt at December 31st last amounted to 9,000 million lei, and the monthly deficit is now about 200 millions. The future exportable surplus of Greater Roumania is estimated at 5,000,000 tons of cereals, 500,000 standards of timber and 1,000,000 tons of petroleum products. Before the war Roumanian trade was an offshoot of German and Austrian home trade, but now German and Austrian goods will first have to pass through territories of other States. British goods, on the other hand, will be carried direct by steamer to the ports of Roumania on the Lower Danube. The crops of the past two years have been much below the average, but this year's harvest is expected to suffice for the home food supply. "The Government is making every effort to obtain agricultural machinery and to distribute repaired machinery amongst the peasants.....The outlook is, however, infinitely better than it was a year ago, and the steady progress already achieved during the first year after the war may serve as an index to the trend of events in the future."

Conditions in Japan.—Telegraphic advices state that the financial conditions in Japan are still stagnant, with few transactions in securities and small variation in prices. Commodities are also quiet, and there is a tendency to further increase in warehouse stocks. Silk factors in Yokohama have resumed business since the 6th of this month. Consequently stocks in the market increased suddenly and depressed the price. The money market is full of short money, and the rates of discount became easier. The restrictive attitude of bankers seems to be somewhat relaxed.

Peru's Prosperity.—The general economic prosperity which attended Peru during the war shows little sign of abatement, provided peace can be maintained between it and its neighbours. During the war, with the world in need of its products and willing to pay high prices for them, Peru had an unprecedented opportunity to further her economic independence. In imports there was an increase from £P5,140,338, in 1912, to £P13,502,851, in 1917, while the exports rose from £P9,438,581 to

£P18,643,414. The excess of exports over imports advanced from £P4,298,243, in 1912, to £P5,140,563, in 1917. It is necessary to emphasise, however, that this excess of exports over imports is only apparent, and may be largely accounted for by the arbitrary Custom House valuation of imported commodities and by the inexact methods of valuing exports. The imports are assessed according to an antiquated schedule, which would require considerable revision upwards to express the real values. A partial revision was made and applied to the imports of 1916 and 1917, accounting to a large extent for the increased figures of imports for those years; so great, however, was the contemporaneous rise in the prices of commodities that even the new schedule, according to competent opinion, did not represent more than two-thirds of their market values. British interests in Peru are very considerable; apart from the heavy investments in the concerns of the Peruvian Corporation, a large amount of capital has been invested in oil-fields and sugar estates. In view of the world-shortage of sugar, it may well be thought that Peru will be found at the present time a fruitful field for further investments of this character. The Republic has found the demand for her high-qualities sugar greatly augmented, but has not been in a position to satisfy it to any increased extent. London and New York are the principal, but by no means the only, markets open to Peruvian sugar, and both take considerable quantities. Chile produces no sugar, and consequently purchases her requirements largely from Peru for treatment in her own refineries; Uruguay and Argentina also buy Peruvian sugar in exchange for wheat and other food-stuffs; while Mexico for the first time entered the Peruvian market last year (1919). Because of this competition, sugar prices in Lima do not conform as closely to London or New York quotations as do copper prices, but the following figures show with tolerable accuracy the price-trend of Peruvian sugar during the period 1912 to 1919, the quotations being given in £ sterling and being those of the Lima-Bolsa for 96 per cent. centrifugal sugar per quintal (101.4 lbs):—1912: High for the year, 15s 2d; low for the year, 9s 11d. 1913: High for the year, 10s 3d; low for the year, 9s 2d. 1914-5: No quotations are available, but the market advanced immediately after the beginning of the war, when Peruvian sugar reached 17s and 18s per quintal. 1916: Prices opened at 11s 6d, advanced steadily until 17s was reached in May, remained steady until the middle of August, and then declined slightly, closing at 13s. 1917: Low price, 11s 9d; high price, 18s 1d; a steady advance during the year. 1918 opened at 15s, advanced steadily until 21s was reached in November, and then declined to 19s at the close of war. 1919: The market for quotation in June last was 18s 8d, but sales had been made earlier at 20s 4d and 20s 10d. Other manufactures influenced by war conditions have been the cotton trade, which ranks second only to that of the sugar industry, practically the whole output from the Peruvian mills being taken before the war by Liverpool, which, again, supplied the United States market. To-day, however, American manufacturers are sending their buyers directly to Peru, and in all probability the services of Liverpool will hereafter be dispensed with. None the less, cotton prices in Peru must continue to be governed to a large extent by the quotations on the Liverpool exchange.

Apollinaris and Johannis.—The directors of Apollinaris and Johannis, Limited, have now issued their report and accounts for the six years ended March 31, 1920. The report states that during the war the profits of the business did not suffice to meet current expenditure, although the latter was reduced to its utmost limit, as the trade had to be confined to the liquidation of the pre-war stocks of the company's waters and to the sale of medicinal waters. The profits of the other portion of the six years covered by the present accounts and balance-sheet were enough to wipe out the accumulated loss, and to leave a credit balance of £26,056. In the balance-sheet which is submitted to shareholders a debit of £156,803 is shown for profit and loss. This is arrived at in the following manner:—Interest paid on debentures for two years to March 31, 1916, takes £68,000, and interest on debentures accrued to date is given as £136,000. This makes £204,000 in all. The net profit for six years, £25,056, and balance from March 31, 1914, £21,141, are then deducted. The Owens European Bottle Machine Company of Toledo, Ohio, have made a further return of capital upon shares held by the company, amounting to £27,684. This sum has been added to the capital suspense account, which now totals £105,025. We notice that the chief item in assets is "Amount of capital expenditure," at £3,243,724. This item is recorded at the same amount in the balance-sheet for the year ended March 31, 1907.

Edward Lloyd.—A prosperous state of affairs is revealed in the report of Edward Lloyd for the year 1919, trading profit having increased from £178,000 to £223,000 and net profit from £137,400 to £217,900. Trading profit would have been still larger in comparison but for the fact that income-tax has been deducted before showing the 1919 figure. As will be seen from the comparative table below, the amount available for distribution is £93,300 higher at £270,600:—

	1913.	1915.	1916.	1917.	1918.	1919.
	£	£	£	£	£	£
Trading profit..	152,363	103,386	123,953	151,536	177,941	223,033
Brought f'wd..	23,629	39,234	39,304	37,195	39,923	52,690
	175,992	142,620	163,257	188,731	217,864	275,723
Mangt. exs.,&c.	9,869	16,191	23,937	24,183	40,549	5,121
	166,123	126,429	139,320	164,548	177,315	270,602
Reserve, &c. ..	20,000	20,000	20,000	20,000	20,000	20,000
Pref. div.	37,125	37,125	37,125	37,125	37,125	37,125
Ord. div.....	67,500	30,000	45,000	67,500	67,500	82,500
Rate	(11¼ %)	(5 %)	(7½ %)	(11¼ %)	(11¼ %)	(13¾ %)
Carry forward..	41,498	39,304	37,195	39,923	52,690	130,977

A sum of £20,000 is carried to reserve in accordance with the articles of association and the ordinary distribution is raised from 11¼ to 13¾ per cent., free of tax, while the balance forward is increased by £78,300. Stores and stock-in-trade show an increase in the balance-sheet, which is analysed in another column, of £288,100, and debtors are £133,300 higher, but there has been a reduction of £123,000 in investments, and cash is £64,400 lower.

Gordon Hotels.—Negotiations are still going on with reference to the claims of the Gordon Hotels, Limited, against the Government for occupation of their hotels during the war; and in the report of the company which has just been issued it is stated that the Hotel Metropole has not yet been handed back by the Government. The following table shows how the company has fared from 1914:—

	1913-14.	1914-15.	1915-16.	1916-17.	1917-18.	1918-19	1919-20.
	£	£	£	£	£	£	£

Preference div.....	53,075	..	..	..	..	106,150	106,150
Ordinary div.	28,950	..	..	..	..	..	..
	(3 %)	nil	nil	nil	nil	nil	nil
Carried forward....	4,592	6,890	*Dr 23,525*	9,210	35,743	24,169	42,263

* *Dr 23,525* less £15,500 compensation for Hotel Metropole.

From 1905 until the war the ordinary dividend varied between 2 and 3 per cent., but ordinary shareholders have received no distribution for the past six years. There are also 100 deferred shares of £10 each on which nothing has been paid since 1903. A year's dividend on the preference shares has already been paid during the past twelve months, and another year's dividend is to be paid, which brings up payment of preference arrears to March 31, 1918. As one year's dividend on the preference shares absorbs £53,075, a distribution on the ordinary shares in the near future is not unlikely.

Industrial Week-end Conferences. — The Industrial League and Council, 82 Victoria street, S.W. 1, is arranging week-end conferences of employers and employed. The latest took place at the residence of Mr E. J. P. Benn last Saturday and Sunday, and others will follow, when Sir Samuel Waring, Mr Hugo Hirst, and Mr H. V. Roe will in turn act as hosts. The League is prepared to accept offers from others who are willing to act as hosts.

FRANCE.—THE BUDGET AND THE PUBLIC DEBT—FOREIGN TRADE—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, July 20.

THE French Chamber resumed its sittings to-day, after the usual recess for the great Fourteenth of July National Holiday, and has restarted its work in the hope that it will be able to dispose of the Finance Act by the end of the month, in order to avoid a further vote on account. Simultaneously, M. Paul Doumer, the rapporteur of the Budget Commission of the Senate, before whom the Budget Bill will very shortly appear for final approval, has issued his general report on the financial proposals involved.

The report shows that down to the end of the current month France has incurred supplementary expenditure entirely due to the war amounting to 233,299,536,826 francs. At the outbreak of the war, he states, France was in an excellent financial situation, in spite of what then appeared to be her enormous public debt, amounting to 30,000,000,000 francs (which had been allowed to increase, rather than to be liquidated, during the forty years of peace). This debt was supportable, in view of the resources of the country, and the annual Budget of 5,000,000,000 francs was not out of proportion to those of other countries. Deducting the normal increase in expenditure that would have occurred if the war had not taken place, M. Doumer places the real expenditure due to the war at, in round figures, 200,000,000,000 francs, which will be compensated for by no indemnity. This does not, of course, include the loss to France represented by 1,500,000 of her sons killed in the war, the hundreds of thousands of mutilated and permanently disabled, the loss of the result of six years of productive labour, and the devastation of the ten richest departments of France.

The 233 milliards of expenditure incurred between August 1, 1914, and July 31, 1920, M. Doumer shows, have been met, in round figures, as follows :—

	Francs.
Ordinary and extraordinary taxation	43,300,000,000
Advances by the Banque de France	26,000,000,000
National loans	72,000,000,000
Treasury bonds	46,000,000,000
Credit abroad	35,000,000,000
	222,300,000,000

The fact that the deficit of 190,000,000,000 francs, unprovided for by taxation, has been met by "consolidated or short-term loans, precarious credits, and Treasury expedients," M. Doumer criticises severely, and regrets that only a tardy and insufficient effort to meet the situation has been made. The "fiscal negligence" that has been shown since the war ended, he says, is inexcusable.

Nothing can give a better idea of the financial situation of the country than an examination of the public debt. Taking into account the redemption accomplished, in regard to Rente issue during the war, through the play of what is known as supporting the market, and calculating the amount of the foreign debt at par in foreign money (with the full knowledge of the increase that would result from the present rate of exchange if payment had to be made forthwith), M. Doumer arrives at the following calculation of the amount of the French public debt on July 1st :—

	Francs.
Internal debt, perpetual and redeemable	121,949,111,150
Floating debt	51,464,261,500
Advances by banks	26,020,000,000
Foreign debt	34,296,102,000
Total.....	233,729,464,650

If the debts owed by France abroad be calculated at the present rate of exchange, the total public debt of the country would amount to 266 milliards, less 3,880,000,000 francs owed to France by various foreign Governments, or roughly 262,000,000,000 francs. This enormous debt, M. Doumer points out, so long as it remains a burden to the State, "will make the situation of the country difficult and precarious, and its credit mediocre.....To redeem the debt is, therefore, an obligation as imperative as is the payment of the charges upon it. The credits devoted to this purpose are those which for a long time to come we shall have no right to reduce." The first step towards carrying out this policy is shown by the present Budget, which reaches the colossal total of 26,000,000,000 francs (as compared with 5,000,000,000 francs before the war, as I have already mentioned).

The French trade returns for the first six months of 1920 fully confirm the evidence of the steady improvement in the foreign trade of the country, which has been disclosed by the monthly official figures, and show that the adverse trade balance has during the past half-year been substantially reduced. The bulk figures of the principal categories of foreign trade, as compared with those of the corresponding period of 1919, are as follows :—

IMPORTS.

	First Six Months of 1919.	First Six Months of 1920.	Increase or Decrease.
	Francs.	Francs.	Francs.
Foodstuffs	3,999,734,000	3,846,427,000	— 153,307,000
Raw materials.....	5,851,666,000	7,696,803,000	+ 1,845,137,000
Manufactured goods ..	3,870,159,000	4,086,697,000	+ 216,538,000
Totals	13,721,559,000	15,629,927,000	+ 1,908,368,000

EXPORTS.

	Francs.	Francs.	Francs.
Foodstuffs	317,598,000	794,726,000	+ 477,128,000
Raw materials	424,171,000	2,008,067,000	+ 1,583,896,000
Manufactured goods ..	1,703,143,000	4,688,947,000	+ 2,985,804,000
Postal packets.....	238,864,000	288,461,000	+ 49,597,000
Totals	2,683,776,000	7,780,201,000	+ 5,096,425,000

It should be noted that the values are calculated at the rates current in 1914, so that the details given above may be compared from the point of view of quantities also. One outstanding feature of these returns is the enormous increase in the exports of manufactured goods, which have increased during the six months by nearly 3,000 million francs, or 175 per cent., as compared with the corresponding period of last year. Another feature is that the imports of foodstuffs have been 153 millions less than in the first half of 1919, while French exports of the same category of goods have increased by 477,000,000 francs. The two factors indicate that French agricultural production is increasing at the same time as the manufactured output. The figures for June are especially favourable, and show an increase in exports of 1,142,000,000 francs, as compared with June, 1919, while imports—for the first time for a long period—showed a decrease of 18,000,000 francs.

Feeling on the Bourse has been much more optimistic this week, and even the hesitations of the Spa Conference have not succeeded in exercising a depressing effect. The news from abroad, particularly from Russia, has contributed to the improvement in prices, and the fact that Russia is willing to grant an armistice to Poland has been received enthusiastically in business circles, while it is

also noticed with satisfaction that the Government at Moscow is willing to make valuable concessions. Other securities have shared in the sudden rise in Russians. French Rentes are remaining firm, the Three per Cents., for instance, being stronger than they have been recently at 58.20. Banks have again risen this week, Crédit Lyonnais advancing from 1,649 to 1,685, and the Banque de Paris standing at 1,670, as against 1,545. Railways and shipping have shown an improvement, Orléans, for instance, selling at 855 as against 840, Transatlantique at 474, as against 454, and Chargeurs Réunis at 1,440, as against 1,330. Metallurgical undertakings have been in demand, with, however, no very marked advance in price. Petrol shares are again very firm, Royal Dutch standing at 29,900, Mexican Eagle at 495 (advancing from 465), and Baku at 3,975, as against 3,225. Sugars have again improved, Sucreries d'Egypte increasing to 1,070, from 930, and other similar undertakings showing a considerable advance in price.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows :—

GERMANY. — SPA — EXCHANGE AND BOURSE — PRICES — INDUSTRIAL CONDITION — EXPORT DUTIES.

(FROM OUR CORRESPONDENT.)

BERLIN, July 16.

THE Spa coal settlement, if, as is assumed at time of writing, it compels Germany to deliver 2,000,000 tons a month, will not be well received here. Newspapers and experts during the past week proclaimed that such a delivery is impossible; and an economic solution which is accepted only after threats of military measures must be at best bad. The procedure at the Conference has sharply disillusioned those Germans who since the Entente declaration of early March imagined that the economic reconstruction of Europe on purely business lines was to be begun. At the same time, the German argument that there is an absolute figure of coal delivery which could be safely conceded, but beyond which Germany cannot go, is not tenable; and has weakened rather than strengthened Germany's own point. "Possible" is the delivery of any amount of coal up to the full production less the coal needed for transport; but as even the recent small deliveries seriously starved Germany's industries and public services, an absolute figure of practicable coal delivery cannot be worked out. The delivery of 2,000,000 tons will merely further aggravate present bad conditions. If Germany had no other obligations under the Peace Treaty this might be a matter of indifference to the other parties at the Conference; and in that case it would have been quite as practicable to require 3,000,000 tons. The trouble is that the coal delivery is a payment on account towards the yet unsettled reparation claims; and that every additional ton of coal delivered means a further weakening of industries which are the latent asset realisable for settlement of the major claim. As coal sent abroad represents a much lower value than coal consumed at home by industries producing valuable goods, Germany's all-round ability to pay must be considered reduced by the settlement at Spa.

The leading foreign exchanges were slightly firmer during the last week, but there is so far no sign of a resumption of the violent fluctuations of last winter. The official selling rate for sterling yesterday was 151.77½, and for the dollar 38.75. The Stock Exchange continued to show reserve. An influence is the strike at the Golpa Power Works, which has caused reduction of Berlin's service of electricity for industrial and private uses. Mining, shipping, and oil securities were most active. Yesterday, after a long rise, there was a drop in the leading oil shares, Deutsche Erdol, Deutsche Petroleum, and the Roumanian Steaua Romana. The bull speculation in these shares which has gone on all the year was originally based on the rise in the foreign exchanges, plus the expectation of heavy compensation for surrendered foreign interests, but the recent course of the oil quotations has differed considerably from that of other shares. Most other shares rose automatically as the mark exchange fell; fell heavily after the mark recovery, and have since moved little; but the oil shares, after the rise in the mark had depressed them for a time, again rose rapidly, and are now all about the prices which could be calculated out of their exchange value alone :—

	Jan. 2.	March 31.	July 1.	July 15.
Deutsche Erdoel	565	870	1,015	1,625
Deutsche Petrol	455	786	740	864
Steaua Romana	920	1,429	975	1,020

The activity in shipping stocks is due to proposals for sale back to Germany of shipping surrendered to England as penalty for the Scapa Flow sinking. The mining and metallurgical market is governed by the continued refusal of the "Reichskohlenverband" to cut coal prices, and by the expectation that the "Eisenwirtschaftsbund" will again reduce prices of pig-iron and half-finished products from August 1st.

The Government has been obliged to raise the prices of the chief food crops of the harvest of 1920. This was done only after an inquiry brought out the fact of a large increase of production cost since the beginning of the year. The production-cost index, starting with 100 on January 1st, was on June 1st 169.24, the main factors being a rise of fertilisers from 15 to 30.83, of wages from 40 to 70.40, and of maintenance of machinery and implements from 10 to 19.37. Of seven other items, only fodder showed a reduction, this very slight. The Government is obliged to encourage production, because the tendency not to cultivate doubtful land, and to change from maximum-priced crops (the essential for nourishment) to free crops, becomes every day more marked. In Prussia last autumn, as compared with autumn, 1918, the area under winter wheat fell 18.5 per cent., rye 11.6 per cent. Since 1913 the area under wheat has fallen 41.3 per cent., rye 26.8 per cent. The price of rye has now been raised to 1,400 marks a ton, and of wheat to 1,540 marks. The prices of

barley and oats have been cut 50 marks to 1,350 marks. These prices replace the minimum prices of 1,000 marks for rye, barley, and oats, and 1,100 marks for wheat decreed in March provisionally until reasonable maximum prices could be determined, and based on production cost of January 1st. The Government has announced that no increase in the price of bread will be made. This decision is rightly criticised, as it can be maintained only if the Republic spends on food subsidies still more milliards which it can ill afford. The measure is taken in view of recent disorderly demonstrations against food prices, and because of a desire to avoid trouble at all costs, even if that can be done only by concealing from the population that an unpleasant relation between income and living cost is the normal expression of the country's impoverishment. The State will now pay the landowners and farmers, the industrial consumer will refuse or evade repayment to the State, and the finances will go from bad to worse. Even the *Vorwarts,* which represents almost exclusively the industrial consumers, protests against the Government's announcement as a device to obscure the truth.

The condition of industry gets worse. The number of registered unemployed in the whole Republic, which reached its lowest on June 1st with a round 270,000 persons, was 289,000 on June 15th, and has since certainly increased. The Minister of Labour, Dr Braun, predicts that things will get worse. So far, for many of the unemployed emergency work has been organised by the State, particularly in the building of harbours, canals, and reservoirs. The outlay up to date is three milliard marks, which ought to be ultimately recoverable. Good work has been done towards completion of the "Mittellands Canal," joining the Dortmund-Ems Canal, and, therefore, the Rhine, with the Weser and Elbe. A Bill for the continuation of this plan, which for decades was successfully opposed by the Junker Agrarians, was introduced into the Prussian National Assembly last week, and a 300,000,000 marks credit demanded. States and districts which profit are to give financial help. Since November, 1918, the Republic, States, and municipalities have spent 1,400,000,000 marks on supporting unemployed.

The condition of the leather market is very bad, owing to difficulty in selling finished goods. The kid and leather glove industry is in a critical state. The cessation of the pre-war import of skins from Italy, Greece, Bulgaria, and Russia drove material prices to nearly forty times their peace level, and the home sale has been hit by treatment of all gloves not made of textiles as luxuries, subject to the 15 per cent. luxury tax. The Elberfeld silk industry reports that it is receiving orders from England, the Dutch Indies, and South America, but that its recent reduction of prices has failed to attract home buyers. The Upper Silesian engineering industry reports being hit by the practical exclusion of German machinery from Poland, formerly an important market. The metal finishing industries are trying to revive the home buying market by price reductions and by conceding sliding-scale prices in contracts for future delivery, so giving wholesalers and retailers a chance of profits if the general price fall should go further. Suppliers of raw and half-finished metals, who starved the finished industries as long as prices were rising, now insist on immediate acceptance of ordered goods, and at present manufacturers have more material than they can handle, and meantime remain out of their capital.

As these conditions can be remedied only, and then only partly, by increased exporting, the Government has given way further on the export duties question. From June 15th the export duties on a large number of products, mostly of the leather class, including hides, pelts, boots, and gloves, have been reduced. The Government had further authorised export of raw metals up to 50 per cent. of the production, and of half-finished metals where the price charged is not under the home price. The import of raw metals, when price paid does not exceed that of world-market, is also allowed. The representative Export Trade Boards (*Aussenhandellstellen*), whose chief function is to test export prices, with the aim of preventing unprofitable dumping, have petitioned the Government to suspend the export duties for all classes of goods. Export, says the petition, is already so stagnant that it will not stand the duties.

ITALY.—PRICE MOVEMENTS.

(FROM OUR CORRESPONDENT.)

TURIN, July 16.

THE course of prices in Italy may be studied in the series of number indexes published every month by Professor Bachi, exactly after the method of the *Economist's* Number Index. Professor Bachi, in a recent number of *L'Economista,* has published the whole series of his number index from 1913 to May, 1920, to which I am able to add, thanks to the kindness of the author, the number index for June. The basis 100 is the average price of 1901-5, as for your number index. The Italian indexes are all percentage numbers.

Date.	Cereals and Meat.	Other Food Products.	Textiles.	Min'r'ls and Metals.	Miscellaneous.	Total.	*Economist's* Numb'r Index.
1913 (average).....	120·2	146·1	120·6	121·0	117·9	126·0	..
1914—June	115·9	132·7	115·6	111·7	107·7	117·0	115·9
December	136·0	119·8	102·2	142·1	113·6	119·7	127·3
1915—June	149·5	124·6	126·3	260·3	154·5	161·3	147·7
December	178·2	166·2	170·3	371·1	206·2	214·8	165·1
1916—June	184·8	194·7	194·1	459·7	232·8	242·8	191·5
December	205·7	198·7	278·8	594·2	243·7	294·6	223·0

December	322·9	276·5	515·5	870·7	384·0	459·3	265·7
1918—June	335·5	326·0	589·8	975·1	468·1	523·5	277·5
December	365·0	418·4	584·3	520·9	509·5	468·9	277·0
1919—June	396·6	501·8	455·9	506·6	396·0	451·0	281·3
December	420·4	544·9	793·5	706·4	477·1	576·2	334·7
1920—January	436 5	578·1	937·4	811·9	492·3	634·7	353·1
February	438·6	582·2	1013·2	1036·7	522·7	701·0	370·9
March	458·5	610·4	1159·6	1205·2	576·0	780·0	379·6
April	475·2	712·6	1283·9	1302·5	630·8	855·7	374·2
May	530·2	728·4	1012·8	1317·8	619·4	830·3	372·7
June	535·0	741·1	895·3	1109·9	628·4	773·5	356·7

The general trend of prices is the same in Italy as in foreign countries, but the rise was eightfold, when in England it was not nearly fourfold. The difference between the rise in Italy and the rise in England may be partly explained by the rise in foreign exchanges, *i.e.,* the depreciation of the Italian paper currency. The exchange on London, which in June, 1914, was almost at par, was at 122.9 per cent. in December, 1915, 129.3 per cent. in December, 1916, 156.6 per cent. in December, 1917, 120.2 per cent. in December, 1918, 198.7 per cent. in December, 1919, and 260 per cent. in June, 1920. If we reduced Italian prices in the same proportion as the lira is depreciated, we could see that the rise (in British £) of Italian prices is less than the rise of British prices. Fortunately, the rise in wholesale prices, on which Professor Bachi's index is based, is not wholly reflected in retail prices. Many prices are controlled, and others, as house rent, are fixed by law. If the cost of life had risen eightfold the social discontent would have been even more full of danger.

The set-back in prices has manifested itself in Italy somewhat later than in Great Britain, the high water mark being reached in April instead of in March. The decrease is limited to textiles and minerals and metals, *i.e.,* to foreign imported goods, on the price of which the influence of decreasing maritime freights and of decreasing exchanges was the greatest. The rise was less in cereals and meat, other food and miscellaneous which are native goods.

POLAND.—FOOD CONTROL AND CABINET CRISIS—THE LABOUR MOVEMENT—IRON ORE RESOURCES OF POLAND — EXPORT OF CEMENT — TRADE DEPRESSION — MONEY MARKET — SUGAR PRODUCTION IN THE UKRAINE—DANZIG.

FROM OUR CORRESPONDENT.

WARSAW, June 30.

THE decision of the Government to put the next year's crop under its control, mentioned in my last letter (*Economist,* June 12th), has given rise to a Cabinet crisis. The peasant members of the Diet refused their support, and Mr Skulski, the Prime Minister, was obliged to resign. During two weeks all attempts at forming a new majority were without success, and finally it was necessary, after an interregnum lasting more than two weeks, to resort to a no-party Government. Mr Grabski, the Minister of Finance, is actually at the head of the new Cabinet, which has no political programme, and can be hardly expected to be of long duration.

This week a protracted strike of the municipal workers

of Warsaw has ended with a surrender of the strikers. Their claim of receiving wages for the period covered by the strike has been rejected. The strike showed clearly that the Polish people will not tolerate anything in the way of Bolshevism. As soon as the workers declared the strike a "social self-help," composed of University professors, students, Boy Scouts, &c., was organised, so that the town has been only deprived during a few hours of its most important municipal services.

It is pretty certain that Poland is not a ground on which Bolshevism can hope to carry a successful propaganda. At a congress held by the Socialist trade unions all Bolshevist resolutions were rejected; among others the majority declared itself strongly against the introduction of "factory soviets," similar to those which have destroyed all industrial organisations and discipline in Russia. Besides the Socialist trade unions, which dispose of 564,302 members, there are in Poland National and Christian Unions, with an aggregate membership of 453,612 workers. Those unions are decidedly anti-Bolshevist.

It may be said that the period of social neurasthenia, which made itself felt after the armistice, and manifested itself in political strikes, and in a decrease of the productivity of labour, is now quite over. This is clearly shown by the statistics of coal output. The monthly average of coal, extracted by one workman, amounted in 1912 to 12.44 tons, in January, 1920, to 14.29, in February to 13.56 tons.

The Geological Institute is preparing a survey of the Polish iron ores, the quantity of which is estimated between 250,000,000 and 600,000,000 tons. Before the war the production of the mines was declining, because the ores could not compete with the much richer ores of South Russia, the transport of which was favoured by special railway tariffs. In consequence, the output of the Polish mines fell from 483,000 tons in 1899 to 310,000 tons in 1913. The situation has changed completely. Poland has not to fear any more the Russian competition. Still more important is the fact that, in all probability, Upper Silesia will depend in the future on the Polish supplies. Only 22 per cent. of the ores consumed by the Silesian iron trade are extracted in this province, the rest must be imported. Before the war Sweden covered the deficit, but the rate of exchange is now a great obstacle towards the import of raw materials from this country. Already in 1917 representatives of the Silesian *Schwerindustrie* drew, in a memorandum presented to the German authorities, the attention to the importance of the iron resources of Poland, and actually the *Oberschlesisches Berg und Hüttenmännisches Verein* made to the Polish Government an offer of co-operation in view of the increase of the output of those mines.

Since the beginning of this year Poland is exporting cement to Germany, England, Switzerland, &c. This trade has been much hampered by the lack of coal, but it is hoped that this industry will benefit first of all by the increase of the quantity of Silesian coal allotted to Poland by the Reparation Commission. The normal production of cement amounts to about two million barrels. Of this only one million is necessary for home consumption, so that the other million can be exported.

The wave of trade depression has reached Poland. Prices of manufactures are rapidly declining, and the textile trade has been most severely affected. The crisis has been probably aggravated by the fact that in the Lodz district large quantities of cotton goods were stocked in the hope that in the near future they will be exported to the Ukraine.

The change of the political and military situation had a very depressing influence on the industry of this district, and the price of cotton goods has decreased by 30 to 40 per cent. Most of the factories are working only three days a week. The trade depression is probably principally responsible for the rise of the Polish mark, which we can observe on the Stock Exchange since two weeks. The textile industry is abstaining now from all imports of raw materials. In consequence the English pound, which stood in May at 860, fell in the beginning of this week to 520. It has recovered again, and is actually quoted at 590. Other foreign exchanges have moved in the same direction.

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

According to news from the Ukraine, the area under sugar beet amounts to 150,000 dessjatins. It is estimated that the crop could give about 15 to 20 million poods, or about 240,000 to 320,000 tons of sugar. This is only one-tenth of the normal production, which amounted to 150 million poods.

We give below the shipping statistics of the port of Danzig for 1919, as compared with pre-war figures :—

	1913.		1919.
Tonnage entered.....	1,233,660	....	565,010
Tonnage cleared.....	878,471	....	193,689

Of the 565,000 tons of merchandise entered, 350,000 were destined for the Government, so that the imports for private account did not exceed 200,000 tons. This stagnation of the import trade is due in the first instance to the decline of the Polish mark. Before the war coasting vessels formed the bulk of the commercial fleet entering the port, but now trade relations with oversea countries, especially with the United States, England, France, Sweden, and Finland, are more extensive.

CANADA. — SIR R. BORDEN'S RESIGNATION — MR MEEGHEN SUCCEEDS — A NEW PARTY AND PROGRAMME — CROP REPORTS — TRADE AND BUSINESS CONDITIONS—THE STOCK MARKETS —THE ONTARIO GOVERNMENT AND THE HYDRO-ELECTRIC COMMISSION — THE WHEAT MARKETING PROBLEM.

(FROM OUR CORRESPONDENT.)

OTTAWA, July 8.

PARLIAMENT prorogued on July 1st, and on the same day Sir Robert Borden, as was anticipated, announced to a party meeting of the Coalition his definite intention of immediately relinquishing the Premiership, and closing his political career. His rest has been well earned, and he leaves office in good standing with the mass of his fellow-countrymen. Mr Meeghen, who, assuming the Premiership in his forty-fifth year, is the youngest Premier that Canada has known, has earned the succession by sheer ability and hard work. His advocacy of the national railway system and State activity in other directions, such as the national marketing of wheat, prevent him being classed as a normal Conservative, and have rendered him suspect to many of the financial interests. The general opinion is that the Government will have difficulty in avoiding a general election before the year ends, and that then it will fall a victim to a massed attack by a variety of enemies—Liberals, farmers, and Labourites.

The crop reports are being anxiously scanned, especially such as come from the crucial region of the West. On July 8th the Manitoba Department of Agriculture issued a report to the effect that accounts from 50 per cent. of the points queried by it were entirely satisfactory, while from most of the others there was some complaint of lack of rain. Grasshoppers have been successfully checked, though they are still doing damage in odd districts. Many early wheat fields are headed or heading out, and a fairly early harvest is expected. The report is thus summed up, "There is no suggestion of crop failure, and indications run from 'fair' to 'very good.'" Saskatchewan is the most important wheat-growing province, and reports vary. Alberta has also been suffering from lack of moisture, but torrential rains fell a week ago, and saved the situation

for many farmers. Pasture on the western prairie is abundant this summer, and most of the livestock have now recovered from their lean and trying winter. In British Columbia there is an average root and grain crop, but apples will be 25 per cent. lighter than last year, though the higher grades will be more numerous.

In Ontario rain came in time to promise an average grain crop. Roots promise well, but hay and pasturage are both light. The crop of fruit of all kinds has promised well, and apple-growers look for their best profits for many years. But a few days ago a severe hailstorm did considerable damage in the Niagara Peninsula, the chief fruit area. Prohibition, which allows scope for the manufacture and sale of native wines, has had the effect of causing a marked rise in the price of grapes. Quebec and the Maritime Provinces report a need of rain to ensure first-rate crops, but no grounds for apprehension. Hay will be light in Quebec and New Brunswick, but Nova Scotia will have a bumper fruit crop. Taking them all in all, crop conditions throughout the Dominion are quite up to the average for the present date, all fears of disaster are removed, and with luck there may be first-rate yields in many localities.

With no grounds for fear of a harvest failure present, business in Eastern Canada ought to be in a better condition than it is. Wholesalers and retailers alike report business quiet, especially in boots and shoes and the clothing lines. The holiday season is doubtless partly responsible, and the new sales and luxury taxes play a part. Many importers are said to have cancelled orders for English goods, especially cottons. Boot and shoe manufacturers complain of a serious lack of orders. Leather has tumbled till it is at its pre-war price, and they can sell now at a more reasonable figure. But retailers will not buy till they have disposed of their old stocks bought at the higher prices. One large boot manufacturing firm in Montreal has partially closed its works. Other firms are threatening to bring the retailers to time by opening stores of their own to dispose of their products. Prices in practically all lines of clothing have shown a steady decline, and there are signs that food prices may also follow. For instance, with the advent of the new crop the price of potatoes in Ottawa has fallen in two weeks from $6 to $3.50 per bushel.

In Winnipeg, the great wholesale centre of the West, houses which handle groceries and hardware report trade good and orders coming in freely, especially from areas where a good crop is assured. The clothing and boot trade continues dull, and many merchants are putting on special sales in these lines, but there is no real price-cutting visible in the West. Further West both wholesale and retail trade are very quiet. Collections in the East are reported "good" and "very good," but at Western and Pacific coast points "poor" and "very poor."

The banks are still pursuing a highly conservative policy, and speculative enterprises are consistently discouraged. The stock exchanges have shown more activity, and advancing prices have been a characteristic of the past week. Quebec Railway, for instance, has enjoyed a minor boom, but the main interest of the markets is still concentrated in the paper stocks, which continue to soar. Abitibi, Laurentide, Brompton, and Spanish River preferred all touched record heights on July 9th, and the constantly recurring question now is, "When will the papers find their top?" The Brompton Company are completing a reorganisation which bids fair to be exceedingly profitable to the shareholders. Sir Lomer Gouin, Premier of Quebec for the last 15 years, has resigned, and will devote his energies to the industrial development of his province. He has joined the board of the Laurentide Pulp and Paper Company, and it is stated that he may also become a director of the British Empire Steel Corporation. The sponsors of the latter enterprise now proclaim that their arrangements have been completed, but, as was foreshadowed in a previous letter, they have been compelled to abandor the project of taking into the combination one or two notoriously "lame ducks." The shipbuilding interests managed to get their scheme of credit guarantees by the State through Parliament in the closing weeks of the session. The business and financial world look upon it with little favour, and the conclusion cannot be avoided that the Cabinet sanctioned it for political ends. But they had the support of a number of Quebec Liberals, whose constituencies were interested.

Sir Adam Beck and the Hydro-Electric Commission, of which he is chairman, have for the last decade been pursuing an aggressive policy of electric power development under public ownership, and can claim credit for a marked lowering of power rates. Sir Adam aspires to cover Ontario with a network of radial railways, and had plans prepared to take over a number of subsidiary lines which belonged to the C.N.R. interests, but had fallen into the lap of the Dominion Government. The Hydro-Electric Commission had secured an option on them, and expected the financial backing of the Ontario Provincial Government, which had already undertaken very heavy commitments for its other enterprises. But American experience shows that the advent of the cheap motor-car has destroyed the profits of many radial railways, and grave doubts were expressed by competent authorities whether the expenditure on the latest scheme would ever be justified. So Premier Drury has announced that he will not lend the credit of the province to the venture till it has been reported on by a public commission. The sentiment for public ownership is strong in Ontario, and there has arisen a great outcry that the Farmer-Labour Government is dominated by the private railway and power interests, but Mr Drury is the last man to be susceptible to such influences, and is probably only following the path of caution.

The Government secured from Parliament authority to continue wheat control and the Canadian Wheat Board for another year. There was considerable hostility to the proposal, but it was intimated that the powers would only be utilised under certain circumstances. The Winnipeg Grain Exchange, which dislikes the Board, evidently expects its complete demise, as its president has announced that arrangements will be made to handle the 1920 wheat crop by ordinary business methods. A large element, however, of the farmers see great merit in the national marketing of wheat, and are pressing for its continuance. Certain politicians and representatives of the manufacturing interests also incline to the opinion that a national system of marketing might be useful to placate the tariff agitation of the farmers and also to reduce the profits of the grain-growers' co-operative organisation, part of which are used to promote political propaganda.

NEW ZEALAND.—"SHAKE OUT"—FEATURES OF STRENGTH.

(FROM OUR CORRESPONDENT.)

BULLS, June 6.

NEW ZEALAND may be considered to be at the beginning of a "shaking out" period, and warnings to this effect are being uttered on all sides. Land is now considered to have reached boom prices, and some banks are issuing circulars to their managers to scrutinise very closely any clients' accounts who would not be able to withstand a fall in prices of our produce. As an instance of the rise in land, I may cite a block of 1,000 acres of rich land in the Manawatu district. This was sold about nine or ten years ago at £30 per acre, and resold five years later at £60. Shortly after it was sold again at over £70, and a few months ago, when cut up into small sections for dairying, realised at auction an average of £114 per acre. Nor is this the highest price that has been obtained for dairying land, and all land has risen greatly the last 10 years.

The chief reason for the expectation of hard times is that now the commandeer of our produce by the British Government is coming to an end this month, N.Z. exports will have to be sold in the open market in competition with the large stocks of meat and wool still in store, and a fall in prices seems inevitable. The freight on frozen meat has also increased from about ¾d a lb before the war to about 2d a lb at the present time, and the freight on other produce has risen in proportion. Then our public expenditure has risen from about 9 millions in 1911 to well over 20 millions in 1920 (the complete figures are not yet available). This is admittedly rather a gloomy

picture. However, while admitting that land is in some cases above its value, the position is not so bad as it might seem. The meat question is admittedly difficult, and we must face a considerable drop in values of fat stock, probably from 30 to 40 per cent., but even then the prices will be payable. Wool can fall considerably in England, and yet the producers here may realise as much as they have been receiving under the commandeer as the price in England is still above normal, while butter and cheese seem likely to realise prices above what dairymen have been receiving. A large amount of wealth has been accumulated during the last ten years, and the fact that New Zealand has financed her loans locally at low rates of interest lately is further proof of this. It is also to New Zealand's credit that the Government has not flinched from applying the screw of taxation, and our Budgets still show surpluses. Our income-tax on incomes of £6,000 and over is now 7s 6d in the £, and the yield from this tax has increased from £316,835 in 1910 to nearly 20 times that amount in 1920, namely, £6,219,336. Our exports have increased from £22,152,473 in 1910 to £49,117,246 in 1920 (for the 12 months ending March 31st), though this is partly due to the higher prices received. Statistics show, however, that for the five years ending March 31, 1919, our surpluses of exports over imports total £53,498,886.

SWEDEN.—PRICES—THE COAL QUESTION.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, July 12.

THE rise in the cost of living in Sweden continues after a short interval during the spring months. The last official statistics compiled by the Social Department for June-July this year indicate a rise to 170 per cent., or 1.8 per cent. higher than the figure arrived at at the end of the first quarter this year. Lighting and fuel have risen 20 per cent. since the beginning of this year, and the groups clothing and "sundry expenses" have also contributed strongly to the inflation. On the other hand, foodstuffs on the whole show no change in prices, the drop in prices for milk, dairy products, and pork being sufficiently counteracted by a considerable rise in prices for wheat-flour and bread, as well as for meat. Rents and taxes are unchanged. Separate statistics on the monthly fluctuations in foodstuff prices, including fuel and light, indicate a rise since July, 1914, of 194 per cent. All these calculations are made for a family of four, with an income at war outbreak of 2,000 kroner, and have been exceedingly carefully made on the basis of reports from representatives in 49 different places. The most burning question here at present is to cover the requirements of fuel for industry and private households, and the settlement of same will decide the industrial position for the near future. To assist merchants and manufacturers in obtaining sufficient coal and coke in the British market, the Swedish Government has stationed a representative in London. A slight improvement has recently set in by the arrival of a good deal of fuel from United States, 10 cargoes, of in all 48,000 tons, having arrived from America during June last, whereas from England during the same month 47,000 tons arrived. The annual trade fair at Gothenburg has just been held, and in general the exhibitors are somewhat disappointed with the result, especially as regards foreign transactions. Foreign visitors, including Danes and Norwegians, have been deterred from placing any larger orders on account of the bad position of their exchange rates.

DENMARK.—FOREIGN EXCHANGES—DEPERSSION ON STOCK EXCHANGE—HIGH PRICES.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, July 17.

THE improvement of the Danish kr which was noticeable a few days ago, when in Stockholm the Danish kr was even a fraction better than the Norwegian, has again subsided. £, which was down at 23.25, is now quoted 23.46; $ have risen to 605.00, from 591.00; French francs from 49.75 to 51.00; Amsterdam from 209.50 to 211.25; Swedish kr are 133.50, and marks about 16.00.

The state of the Copenhagen stock exchange is being freely commented upon. After a period of excessive inflation a very pronounced reaction has set in, without, however, causing much serious disturbance. One or two youthful concerns have gone to the wall, and that is all. The downward movement comprises every description of shares, although on a greatly varying scale. The Handelsbank, in September, 1918, was quoted at 201¾, and although the dividend rose from 10 per cent. for 1917 to 12 per cent. for 1918 and 1919, the quotation to-day is only 146. The same applies to the Landsmansbank, which in the same period, with a dividend for the last three years of 12 per cent. each year, has receded from 196 to 142. The Danish Sugar Factories, which virtually control the Danish sugar industry, stood in August, 1918, at 492, and having paid dividends of respectively 18, 20, and 22 per cent. for the last three years, are now only quoted at 223. The East Asiatic Company, which certainly has increased its capital in the meantime, was at 579 in the early part of August, 1918, and with dividends for the last three years of respectively 45, 30, and 40 per cent., now stands at 288. The Norden Steamer Company was at 740 the end of August, 1918, and with dividends for the last three years of respectively 65, 70 and 85 per cent., is now quoted at about 415. Other steamer companies show far more serious depreciations, whilst the United Steamship Company, the leading company, has done better, the quotation having receded from 523 in September, 1918, to a present quotation of 420, having for the last three years paid dividends of respectively 35, 35 and 60 per cent.

The steamer companies all, or at least the bigger concerns, have vast sums of cash in hand, and the position altogether is considered quite sound and satisfactory, of course with a few exceptions, but the Stock Exchange will not rally, and a slight improvement last week proved only a shortlived flutter.

Denmark has not yet experienced any effect of the fall in prices which elsewhere is beginning to manifest itself; prices are in many or most cases unduly high, and the same applies to labour, although the fall of the Radical Government otherwise has had a salutary effect upon the relations between employers and employees.

Letters to the Editor.

THE QUESTION OF CREDIT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—As a bewildered citizen looking for enlightenment in your columns, might I suggest the difficulty I find in sharing the hopes of the "inflationists" as they are set forth by your correspondents?

From Mr Kitson's letter of June 29th we learn that the "sane policy" for remedying high prices is "increasing the output of commodities, so that the disproportion between purchasing power and goods is levelled up." Which seems to imply that the present purchasing power is much in excess of the output of goods. Why, then, does he so much approve Mr Johnston's view, that currency—which both gentlemen seem to regard as constituting purchasing power—has for 70 years past been quite inadequate to meet the needs of growing production. Mr Johnston wishes to keep prices up by an adequate flow of currency notes, while Mr Kitson's sane wish is to bring prices down by making production outrun the flow of notes.

In spite of this unfortunate difference in their theory it is probable that both these correspondents desire a continuance of rising prices, which it must be admitted is the unfailing accompaniment of good trade. But it seems doubtful, to say the least, whether good trade can be produced at will by increasing currency. Currency is mainly used for paying wages, as Mr Johnston firmly impresses upon us; and so long as an unlimited supply is forthcoming, nominal wages can increase indefinitely and so can nominal prices. Also, I take it, the bills of exchange which Mr Johnston tells us should represent the increase in goods produced and sold, would go up in total value as the price of the goods went up. And the currency notes issued on the security of those bills could go up indefinitely in

amount also. Thus we get a picture of unlimited prosperity which may well make the pessimistic "deflationists" feel a little nervous.

But it is a self-evident truism that there cannot be a general rise or fall of values. Values or prices can only rise or fall relatively to the value of some other commodity, such as gold, which must therefore fall in relative value as commodities rise. So that as prices went up with the increased issue of currency notes the £1 note would depreciate in value by a like amount. If the bankers are refusing to extend credit because they are short of currency (?), it is not obvious that they would be in any better position if they had 20 per cent. more currency notes at 20 per cent. less value per note.

Although Mr Johnston is objecting to deflation and hoping for a continued rise of prices, he assures us there can be no inflation of prices due to increased currency, "because the goods would have been manufactured and sold before the credit was required." But how that would prevent the seller asking and getting an inflated price I do not understand. The larger the acceptance the purchaser gives in payment, the larger the possible issue of notes and the higher the prices when he wants to sell.

While our miserable £1 note will not purchase the quarter ounce of gold which alone it represents, the Bank is hardly likely to extend its credit facilities on the security of a further depreciation of its currency notes.

As Mr Johnston says, the problem wants solving; though I do not know where he will find his committee of experts unless he gives Mr Kitson the opportunity to sit upon a council of medieval theorists.—Yours faithfully,

ALBERT WALLIS.

Westacre, Station road, Kettering,
July 10th, 1920.

NATIONAL DEBT AND HIGH PRICES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—My answer to Mr W. Leighton Jourdan's question, viz., whether an increase in the quantity of money effects prices would, of course, be yes. The unlimited issue that has taken place in many countries proves it, but as to the effect caused by our issue of about £300,000,000 in Treasury notes, I should say it was extremely small. Gold has been withdrawn from circulation and Treasury notes have been substituted for it, both equally representing wealth. We could never have imported enough gold to meet our present wage bill, estimated to be two and one-half times larger than in 1914. How, then, could we settle it, or how indeed settle anything?

I quite admit that in those countries where the exchange is adverse we must pay more for what we buy, yet with imports and exports, including the invisible ones, now nearly balancing, how is it that we have no fall in prices? Does your correspondent really maintain that prices will not appreciably fall until gold takes the place of Bradburys? If such is the case the remedy might be a simple one. I prefer looking for the reasons in quite other directions. I might also add that whereas gold was withdrawn in the first year of the war, the chief rise in prices has taken place after the conclusion of peace.—Yours truly,

H. BEAUMONT.

The Stock Exchange, London,
July 12th, 1920.

INDIAN CURRENCY POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The Indian Currency Committee have recommended in their report a change of India's standard unit, and thereby recommended what amounts to a debasing of currency, as it has done what all debased currency does —viz., changed the relations between debtor and creditor to the very serious disadvantage of the debtor. It has also added to the resources of the Indian Government by making the coin go a longer way than it otherwise should, which is the object aimed at by all bankrupt Governments when they set out to debase their coinage.

They could not bring forward a single sound currency argument in support of their recommendation, and have consequently had to fall back on specious arguments about the need of linking the rupee to gold, the necessity of curbing the prevalent high prices, &c., &c. One of the principal arguments on which they have laid great emphasis was the need of saving India from "inconvertibility." They told us that there was an enormous demand for silver, that silver was bound to remain very high for many years, that, in any event, it could not fall below $1 per ounce on account of the Pitman Act, &c., &c., and then told us that therefore only a 2s. gold rate could save us.

Hardly has the ink been dry on this report when all this fine house of cards has fallen to the ground. If they had given sufficient attention to the history of silver legislation in the United States they would have known that it was foolish to base our plans on the Pitman Act, as it was likely to share the fate of the Bland and Sherman Acts as soon as the Republican party came to power. But we have not had to wait even for the Republican party. While the regime that passed the Pitman Act is still in power, we find silver in New York down to 85c and the American Treasury trying to get round its obligations under the Pitman Act by, as Messrs Montagu tell us, laying down very stringent regulations as to what silver would be considered as of American origin.

So much for the Pitman Act and the New York market. What do we see in London? Notwithstanding all the talk of a famine of silver for years, we find silver a drug in the market within six months of the issue of the report. This was inevitable sooner or later, because the power of China and India to buy silver depended on their continuing to have very favourable trade balances, and their balances would be less and less favourable as commodity prices declined. How rapidly the change can occur we have seen in the past two months, when, in spite of purchases by the Indian bazaar, the silver market has collapsed owing to China turning a seller instead of a buyer.

Now what I wish to ask is this. One of the most important arguments in favour of the change to 2s has fallen to the ground. In fact, silver at 45d sterling is really at 36d gold. In other words, there will again be very considerable profit on the coining of rupees even at the old ratio of Rs 15 to the sovereign.

This so-called Currency Committee had, as I say above, not a single sound currency argument in favour of the change it proposed. It made the most of the argument of convertibility, although its members must have been quite well aware that true convertibility cannot be into tokens. The Indian Government put this most harmful recommendation of the committee immediately into effect in most indecent haste. Perhaps they were afraid lest something might happen to markets to bring their house of cards to the ground. But, most unfortunately for them both, this collapse in silver has come far quicker than they might have reckoned on. What pretext have they now for continuing the 2s rate? If they were sincere in their professions of anxiety to maintain convertibility, here is their chance. Are they buying any silver for coinage now? If convertibility is so essential, they ought to seize this opportunity when China is out of the market.

Also, what are they going to do about the rate for the rupee? Are they going to stick to the new rate? If so, why?

One of the funniest conclusions of this wonderful committee of experts was as follows:—

"If, contrary to expectation, a great and rapid fall in world prices were to take place, and if the costs of production in India fail to adjust themselves with equal rapidity to the lower level of prices, then it might be necessary to consider the problem afresh."

They evidently thought that a standard unit was a thing that could be moved up and down to suit the exigencies of different states of trade. They would never have dared to suggest such a thing for England, but India is evidently fair game for currency experiments. However, what I want to emphasise is this. Deflation has begun, and will shortly go much further. How is India to rapidly adjust its costs of production to the lower level of prices? Is it by cutting down wages? Does any one think this feasible? If not, is it not time to cry halt before we proceed further in the direction of the change in our standard unit?—Yours faithfully,

Bombay, June 17th, 1920. B. F. MADON.

A NATIONAL FISCAL INQUIRY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—If "at least ten reports of the Select Committee on National Expenditure, two reports of the Commission on Currency and Foreign Exchanges, a score or more of reports of the various Committees on Public Accounts," and a nine months' inquiry by the Royal Commission on Income-tax, followed by the Select Committee on War Wealth Levy, not to speak of another Board of Trade report on prices and other kindred matters, are not enough to exhaust Mr Nicholas J. Synnott's capacity for this sort of nourishment, his statistical digestive system must have a prodigious assimilating power. I am afraid most average people, like myself, are more than satiated with Government reports, if not with Government itself. We have had quite enough of "Government," and should like to forget it for a while! These same reports have given certain people who revel in that sort of thing plenty of powder and shot to blaze at each other, but what real benefit has the country got for all the outlay, for, I suppose, those reports are not got for nothing? Mr Synnott wants a Supreme National Inquiry by Chosen Men to reconcile the differences that exist on financial matters. But, presumably, the other Committees have been composed of "chosen" men, "choice" men, if you like, and what is the net result? We should just get another two reports, if not more; and, meanwhile, the inexorable logic of events will have altered the problem, or provided another solution. I question very much if a Committee of Solomons, if they were fool enough to try, could provide a "unanimous" report. The difficulty is not so much in the problem as in human nature, which will get over, or under, or round, or through any solution if it is in its self interest to do so. The whole problem is to get people to be "reasonable"—reasonable in the amount of work they do, and reasonable in the reward they demand for it. That is a matter for the individual, not for a committee of "chosen" men. It does not require a committee of "chosen" men to tell us we must produce more and consume less. The *Economist* has done that already.

While I am at it, perhaps you will allow me to refer to another matter. In your review of the money market you tell us that a "good impression" was made by Mr Chamberlain's statement, at the Mansion House dinner, that we have "passed the peak of our national difficulties," and that large reductions "may" (the quotations are mine this time) be expected in next year's estimates. The money market seems to be very susceptible to "impressions." I have a hazy recollection of an "impression" made on the money market and elsewhere, not very many months ago, by a statement which was construed into a promise that the E.P.D. would be abolished. Was I merely dreaming? I wonder what sort of an "impression" the Chancellor's latest promissory chicken will make on the money market when it comes home to roost a year hence? The capacity of some people to swallow promises is about as extraordinary as the capacity of some patients to swallow the doctor's new pill if he only tells them it is nicer than the previous one. The sugar on top may be sweeter and more thickly spread, but the after taste usually reveals the painful fact that it is the same old pill.—Yours, &c., R. H. K. CLARK.

Bradford, Yorks, July 19th, 1920.

THE POSITION IN NORWAY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In consequence of an article in a local paper at Christiania, *Aftenposten*, it has been reported to newspapers abroad that an economic crisis of great magnitude is about to break out in Norway. Several provincial banks are reported to be in a tottering condition.

These reports, I am able to state, are great exaggerations of facts. The managing director of Norges Bank—the National Bank of Norway—says in the leading paper, *Tidens Tegn*, Christiania, that there is no question at all of any national crisis. The difficulties of a few small banks in the rural districts are not due to losses, but to the fact that their disposable capital has been locked up through their having given loans of long date.

These difficulties, the director of Norges Bank goes on, can easily be overcome by co-operation between Norges Bank and the great private banks in Christiania, the position of which is very strong.

Mr Hagerup Bull, the Norwegian Minister of Finances, and Mr Plathe, the president of the Norwegian Bankers' Union, describe the situation in the same reassuring way.—Yours faithfully, M. M. MJELDE,

(Official Representative in London of the Press Department of the Royal Norwegian Ministry for Foreign Affairs).

46 Kingsway, London, W.C. 2, July 19th, 1920.

Books and Publications.

CURRENCIES AFTER THE WAR.

"Currencies After the War." Published for the League of Nations by Messrs Harrison and Sons. 7s 6d net.

THIS book was published in June. It contains the replies of a number of contributors, some of whom are very distinguished, to a questionnaire which was issued early in September of last year. The preface is dated February 20, 1920. These dates would be of no importance if the purpose of the book were to set out the considered opinions of International authorities on the general principles of currency reorganisation. But, in fact, the answers to the questionnaire contain nothing of the kind. It is possible that in their original form they did contain the "summary of opinions" and the "summary of any important proposals" which are asked for in Questions 6 and 7. If so, the most valuable part of the book has been edited away. What remains is, in most cases, little more than a statistical summary of the currency position in various countries at various dates, down to about the middle of last autumn. As a presentation of facts, the book is therefore quite out of date. Where it encroaches at all on questions of opinion it is so non-committal as to seem often a little disingenuous. As regards inflation, for example, we are usually told that it would be more polite to use another name. It may be creditable to the League of Nations that such a thorny subject should have been treated without saying anything that could offend the susceptibilities of the most sensitive Treasury in Europe. But in rendering a service to the comity of nations the editors have robbed the book of its interest and value to economists. It does, however, contain two chapters which are well worth reading—the chapter on China, which we must surely attribute to Sir Charles Addis, who gives us in 20 pages a most lucid and interesting survey of a difficult subject; and the chapter on Russia. The success of these two chapters is largely to be attributed to the fact that they deal with countries about which the League of Nations editors could afford to allow free speech, and the conclusion to be drawn is that International financial questions can not usefully be approached in a spirit of diplomatic affability.

A TEXT-BOOK OF INTERNATIONAL COMMERCE.

"Theory and Practice of International Commerce." By Archibald J. Wolfe. (New York and London) International Book Publishing Company.

MR WOLFE covers some 540 pages of close printing with his "scientific outline of the merchandising principles in export and import." That text-books on the subject are rare and usually out of date lends value to this volume. Organisation for export and import in all their aspects, sales contracts, and problem of foreign credits are topics that are dealt with at great length. Mr Wolfe writes mainly from the American standpoint and uses chiefly American data, but there is much in the book that might usefully be studied by the commercial reader in other countries. It is always profitable for traders of one nation to study the methods followed by traders of another, and here America's methods in international commerce can be studied to satiety. Of special interest to foreign readers in general will be the examination of the company laws of 38 countries and an up-to-date chapter on the effect of the Federal Reserve system on the financing

of the foreign trade of the United States (pages 459-489). Most of the volume is technical and non-controversial, but it is curious to find so diffuse a writer satisfying himself with half a page (34) to establish the blessings of a protective tariff.

RENTS AND MORTGAGE INTEREST.

"Increase of Rent and Mortgage Interest. The New Act—1920." By Leonard Jessopp Fulton, M.A., B.C.L. (London) L. J. Fulton, 27 Ladbroke grove, W. 11. 2s net.

It was generally understood that the Government intended to publish a synopsis of the new Rent Act. Up-to-date, however, no such work has appeared, and private enterprise disregarding threatened State competition has supplied us with an excellent little guide to the complexities of this piece of legislation which affects most of us. Throughout its 31 pages most of the important test cases are cited which governed the administration of the old acts. And in a few sentences Mr Fulton shows how each of these cases affects the landlord or tenant, when the new Act is taken into consideration. Naturally many points in the fresh Act are not clear. But this is no new complaint with regard to Acts of Parliament. For instance, the sections which deal with furnished houses will provide good material for the occupation of county court judges. And as Mr Fulton says when referring to mortgage interest, "it is not clear from what date it is permissible to obtain the increased rates of interest." Also we are still rather hazy as to exactly what constitutes "repairs," as mentioned in the Act. It appears that in certain cases house owners who have seen "war" service can claim accommodation in their own houses. If by the term "war service" is meant anyone who has laboured for the cause of the Allies during the war, then there must be few house owners in this country who could not offer this plea. A useful index completes a valuable little work of reference.

ECONOMICS ON THE RIVER PLATE.

"Anales de la Facultad de Ciencias Economicas." Buenos Ayres, 1919.

"Anuario Estadistico de la Republica Oriental del Uruguay." Libro XXVII. Año 1917. Director General de Estadistica, Julio M. Llamas. Montevideo, 1919.

The substantial contribution of Buenos Ayrean learning to South American history and economics are probably little known in England, and may be better appreciated after an examination of the important articles, some of them the fruit of the joint research of teachers and students, contained in the volume now before us. Among the subjects dealt with are the incidence of taxation, the application of psychology to commerce and industry, the boycott in trade disputes, and the cost of living during recent years in Argentina. Special mention, however, should be made of Señor Vedia y Mitre's history of the Argentine Constitution, clearing up the confused history of the early years of the Republic; of the prediction by Señores Saenz and Carcano of a current of German and Russian immigrants set up by the discomforts of their home countries, and regarded likely to prove a valuable and assimilable element in the nation; and of Señor Ramallo's account of the State railways, which link the remote North and South with the rest of the nation, but are extravagantly constructed with double tracks and unused stations in regions as yet uninhabited. The full accounts given of the formation and work of the Faculty exhibit its value and importance.

These Uruguayan statistics show the exceptional conditions set up by the war in Europe. As compared with 1913, imports fell in value by about 26 per cent., exports increased by about 51 per cent.—to the United Kingdom nearly threefold, to Italy fivefold, to the United States elevenfold. Meat and meat extracts, hides, and animal fats are the chief factors in the increase. Population has tripled since 1875; elementary school attendance has sextupled. As evidence of recent economic development, we may note that half the issues, other than Government stocks, quoted on the Montevideo Bolsa, date from 1910 or later. Most of these are land bank stocks, two are railways, the rest trams, industrial, and miscellaneous. Immigration is chiefly from Argentina, Brazil, and Spain, and we gather that it is largely temporary and seasonal. Uruguayan demography is evidently well provided for.

BOOKS RECEIVED.

A Constitution for the Socialist Commonwealth of Great Britain. By Sidney and Beatrice Webb. (London) Longmans, Green, and Co. 12s 6d net.

The Statesman's Year-Book, 1920. (London) Macmillan and Co., Limited. 20s net.

A statistical and historical annual of the States of the world. This is the fifty-seventh annual publication, and now extends to 1,494 pages of reading matter. Throughout the volume lists of reference books are given. From these, readers can follow further the concise subject matter summarised in this volume, if necessary.

Oxford Tracts on Economic Subjects. No. 22, The Nature and Principles of Taxation; No. 23, Capital, Capitalism, and Capitalists; No. 25, Price Index Numbers; No. 26, Railway Nationalisation; No. 27, The Story of Money. (London) Humphrey Milford, Amen corner, E.C. 4.

The most interesting and informing of this new batch of tracts are that on Railway Nationalisation, which packs a mass of fact and good sense into four pages, and the explanation of Index Numbers.

The International Idea in Industry. By Sir Charles Macara, Bart. (Manchester) 33 York street.

A summary of what has been accomplished during the past 16 years by the International Cotton Federation and the International Institute of Agriculture, which have co-operated ever since their foundation in 1904 and 1905 respectively.

The Empire Mail. July, 1920. (London) 212 High Holborn, W.C. 1s.

Includes a leader entitled "Our Spendthrift Finance," quoting an estimate by Mr Edgar Crammund of the national income.

The World Crisis: A Suggested Remedy. By Sir George Paish. (London) Benn Brothers, Limited. 6d.

Temperance and the Law. By Ernest E. Williams, Barrister-at-Law. (London) The True Temperance Association, Donington House, Norfolk street, W.C. 2. 3d.

Darkwater. Voices from Within the Veil. By W. E. Burghardt Du Bois. (London) Constable and Co., Limited. 10s 6d net.

BARCLAYS BANK
LIMITED

(with which has lately been amalgamated the London Provincial and South Western Bank Ltd.).

This Bank is in close touch with leading Bankers in all parts of the world, and provides facilities for the financing of every description of Overseas business.

Traders interested in the Foreign Markets are invited to correspond with
THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

Ticket.	Account.
July 28.	July 29.

Falling off of business the Stock Exchange ascribes to the approach of the holiday season. There are other influences at work which have narrowed the volume of trade in most of the markets, and mild surprise is expressed that prices should keep up as well as they do in the majority of markets, considering the political developments abroad. At home, the state of affairs in Ireland and the continued outpouring of new issues do not encourage enterprise either in the investor or the speculator. The Premier's speech on Poland caused a break in prices on Thursday, and although there was nothing approaching a slump, the prevailing sentiment in Stock Exchange circles is none too happy.

The feature amongst gilt-edged stocks is the way in which the three-county and the three-corporation issues have gone ahead during the past few days. The 6 per cents. issued by Middlesex, Kent, and Essex at 95½ have risen to 100 in the cases of the first two named, while the Essex scrip is about 98. The corporation stocks already command premiums. The War Loan, however, has gone back sharply. To explain this, statements are current to the effect that there has been a fresh outbreak of selling on behalf of provincial holders, rendered apprehensive by the Russian-Polish position. Possibly another reason is that on last week's rise the War stock began to look high as compared with some of the other securities in this market. Foreign bonds are amongst the

active markets in the House. There is a good deal of business doing in Argentines, Brazilian, Chilean, Belgian, Chinese, and Japanese, and, indeed, most of the other bonds included in this list, prices being steadily on the rise until Mr Lloyd George's speech. The movement, of course, is entirely of the speculative investment order, and is confined chiefly to investors in this country.

Home Railway stocks are unaffected by the dividend announcements, and the course of the market has been variable, with prices lower in most cases. Grand Trunks gave way a little after their recent improvement. Mexican Rails have also dwindled in the absence of favourable news from the country. Argentine railway stocks are somewhat neglected, and other foreign rails receive scant public attention at present. Most of the dollar securities in the American lists, railroad and utility, have risen substantially this week owing to the movements of the New York rate of exchange.

The price of raw rubber remains low, and while this dulness continues, it is not to be expected that business will improve in the shares. Anglo-Dutch have been one of the firm features, on hopes that the company will almost immediately make some sort of bonus distribution, either in shares or cash, as a sequel to the purchase by the Dutch Government of the company's rice-lands. Amongst oil shares, the starting of a market in Shell Transport rights provided a fresh element of activity. Mexican Eagles were advanced on rumours, probably incorrect, as to the formation of another pool in the shares, but the price weakened as business fell away, and this is what has happened in the case of most of the other market leaders. The buoyancy of textiles was checked by the circulation of cautious estimates as to the outlook for the industry. In the shipping market there is nothing doing. Amongst banking shares, Hong Kong and Shanghais reacted after their rise on the increased dividend, and the list of London shares is doing little more than mark time. Nor is there any fresh interest in the insurance market. Motor shares have plucked up courage after their long spell of depression, the idea being that with a stiff rise in railway charges, motor companies are likely to benefit. Armstrongs and Vickers, after being decidedly better, fell away, but several of the iron and steel favourites, notably South Durhams and Swan Hunters, were absorbed freely by the North and West of England. Other sections of the industrial market are somewhat patchy in consequence of the erratic character of orders that have reached the markets. Gordon Hotels gave way on the issue of the report.

Early in the week the South African market developed renewed strength, on a rise in the price of gold to 107s 9d per ounce, coupled with the announcement that transfer rates had been considerably reduced. The market, however, remained in the hands of professionals, and, lacking public attention, prices sagged away after the burst of buying had spent itself. Similar conditions have governed Rhodesians. Diamonds were relegated to the background. Firmness in Mexican mining shares was held fairly well. Efforts to infuse animation into the West African market for tin and gold shares failed to arouse any interest outside market circles, and prices, which had been strong for a bit, dwindled in consequence of the lack of outside business. A spurt in South Crofty and East Pool shares is associated with developments on the properties, but the Malayan Tin group is practically unchanged. Copper mining shares eased off, and the market in Russian shares is naturally subdued.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

1914	172,176,027	1913	196,536,980

5-15 Year Treasury Bonds, repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. These are still on offer. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

London Housing Bonds.—Registered bonds for £5 each or multiples thereof are obtainable for terms of 5, 10, or 15 years, at applicant's choice. Six per cent. interest and full repayment when due guaranteed by the London County Council on the security of London's rates. Interest payable each September 30th and March 31st. The money will be applied solely for the purpose of housing schemes approved by the Government, and in particular to finance the housing schemes of the Metropolitan Borough Councils. We referred to these bonds in a leader in the *Economist* on June 12th, page 1282.

Four Corporations' Housing Bonds.—

£1,000,000 Coventry Corporation.....	Issues of 6 per cent. Redeemable Stocks at 95½ per cent. redeemable at par July 1 1948.
£750,000 Lincoln Corporation	
£1,250,000 Middlesbrough Corporation ..	
£1,000,000 South Shields Corporation ..	

The stocks will be redeemed at par on July 1, 1948, unless the same shall have been previously cancelled by purchase in the open market, or by agreement with the holders, but each Corporation will have the option of redeeming at par the whole of the outstanding amount of its issue at any time on or after July 1, 1938, on giving three calendar months' notice by post to the stockholders, or by public advertisement. Some interesting particulars are given concerning the financial position of each corporation, which is partly reproduced in the table below:—

	Coventry.	Lincoln.	Middlesbrough.	South Shields.
Estimated population ..	140,000	65,000	130,000	116,150
Rateable value	£537,718	£288,093	£535,902	£495,913
Outstanding debt	£2,438,863	£768,463	£2,380,411	£704,348

The proceeds of the present issues of stocks will be applied for housing and other purposes. These are trustee investments. The prospectus states that quotations on the London Stock Exchange will be applied for in due course.

Vickers, Limited.—Authorised capital £26,500,000, of which £20,679,040 has been issued. There are also 4 per cent. debentures for £1,250,000 outstanding. This is an issue of £1,500,000 7 per cent. seven-year notes to bearer at 95 per cent., repayable at par on July 1, 1927. The company reserves the right to issue a further £2,500,000 of similar notes. The prospectus states that as long as any of the above notes are out-

standing, the company undertakes not to issue any debentures or create charges over its property or assets unless repayment of the notes is a condition of the issue of any such debentures, or of the creation of any such charges. The company, however, remains at liberty to obtain from its bankers from time to time overdrafts with or without security for the general purposes of its business, and retains power to redeem the notes at any time by giving three months' notice. After deducting an amount equal to the debentures outstanding, noteholders have assets as security to the value of £27,733,000—goodwill and patents not being taken into consideration in this sum. Since 1910 the ordinary shares have never received less than a 10 per cent. distribution. This is an investment worthy of the investor's attention.

Brush Electrical Engineering Company, Limited.—Authorised capital £600,000, in 600,000 ordinary shares of £1 each, of which 210,488 are issued and fully paid. This is an issue of 339,512 ordinary shares at par. There are debentures outstanding for £336,839. The company was established in 1879, and re-incorporated in 1889 under the present title. Profits are shown from 1913, but these are before charging depreciation of buildings, plant, &c., also excess profits duty. Against the issued share capital of £210,488 there are assets valued at £338,813 after all liabilities (except excess profits duty, which may be a heavy item) have been provided for. The ordinary capital of the company, has recently been doubled by the capitalisation of "undivided profits." The company has had a distinctly varied financial career. From 1906 to 1917, according to the Stock Exchange Year Book, no dividends were paid on the ordinary shares, but in 1917 and 1918 distributions for 1914 to 1918 were made out of bumper profits. It may be that the corner has now been turned, but in view of the company's history, and without further information than that given in the prospectus, the issue can only be regarded as highly speculative and not suitable for the ordinary investor.

The Imperial Paper Mills, Limited.—Authorised capital £1,000,000, divided into 400,000 5 per cent. cumulative preference shares of £1 each, and 600,000 ordinary shares of £1 each, of which 400,000 preference and 400,000 ordinary have been issued and are fully paid. This is an issue of £800,000 7½ per cent. guaranteed 15-year first mortgage debenture stock at 98 per cent, (part of £1,000,000 first mortgage debenture stock). The stock is, to quote the prospectus, "repayable" at 103 per cent. It will be secured by a first mortgage to the trustees of the freehold property and buildings belonging to the Imperial Paper Mills, Limited, situate at Gravesend, and on the fixed plant and machinery therein, also of the shares in a Canadian company to be acquired by the company as referred to in the prospectus, and by a first floating charge on the undertaking of the company. The repayment of the capital and the payment of interest and sinking fund is unconditionally guaranteed by the Amalgamated Press, Limited, which company has not issued any debentures or debenture stock, and has undertaken that it will not during the currency of the debenture stock of this issue make any issue of debentures or debenture stock charged upon its undertaking. Total assets, including the proceeds of this issue, are stated at £2,718,611. Of this sum, freehold land, buildings, plant, &c., are valued at £1,531,851. It will thus be seen that holders of these debentures have ample security. The guarantee of the Amalgamated Press, Limited, in addition to the excellent earnings of the Imperial Paper Mills, Limited, combine to make these debentures a very good investment. The issue was over-subscribed.

Johnson, Matthey, and Co., Limited. — Authorised capital £1,150,000, of which £750,000 has been issued. There are 4 per cent. debentures authorised for £400,000, of which £305,364 in value are outstanding. Practically the whole of the issued ordinary capital, amounting to £450,000, is held by the directors and friends, and £300,000 in 5 per cent. cumulative preference shares of £5 each have been also issued. This is an issue of £250,000 8 per cent. seven-year notes at 97½ per cent., "due August 1, 1927." The notes are redeemable as a whole or in part on three months' notice at par. Net assets, after £305,364—the amount of debenture stock—has been deducted, are stated as £905,534, and net profits are shown from 1910. While these notes are outstanding, the company agrees not to issue any prior charge mortgages or debentures with the exception of the £400,000 of debentures already referred to. The prospectus is a clear statement of affairs, and the issue is decidedly attractive. We understand that the notes were fully subscribed for on the morning of issue.

The Calcutta Electric Supply Corporation, Limited.—Issued capital £1,100,000. This is an issue of £500,000 5 per cent., free of income-tax, first mortgage convertible (registered) debentures at 95 per cent. The debentures are "repayable" by means of a cumulative sinking fund of 3 per cent. per annum, to be applied by annual drawings at 102 per cent., or by purchase in the market under that price. The holders of the debentures will have the right of conversion into ordinary shares at any time between June 30, 1922, and June 30, 1925, inclusive, at the rate of £150 nominal of debentures for 20 ordinary shares of £5 each, or £7 10s of debentures for each £5 ordinary share. The quotation for the £5 shares just before this issue was announced was 6⅝. The prospectus is remarkable for its simple yet informative statement of affairs. It would be of great assistance to investors if other directors would, when requiring fresh capital, issue prospectuses on these lines. Profits are shown in detail, gross and net, also rate of dividends from 1901. A full balance-sheet is also supplied for the year ended December 31, 1919. The debentures are well secured, both as regards capital and interest, and the issue may be described as attractive.

Patrie and McNaught, Limited.—Authorised capital £300,000. This is an issue at par of 100,000 8 per cent. cumulative preference shares of £1 each and 160,000 ordinary shares of £1 each. There are now offered for public subscription 50,000 preference and 70,000 ordinary shares. The company has been formed to acquire the business of engineers and textile machinists carried on by John Petrie, Junr., Limited, of Rochdale. In 1919 the vendor company purchased 98 per cent. of the shares of the Patent Automatic Feeding Machine Company, Limited, and it has recently acquired the business of Messrs. J. and W. McNaught. It is claimed that these undertakings make and supply about 90 per cent. of the wool-washing machinery used "in this country and the Colonies." Net assets are valued at £259,954, which sum includes £25,000 for goodwill and trade marks. A further £25,000 is asked for patents, patterns, and drawings. The purchase price has been fixed at £246,986, payable in cash. In the advertised prospectus past profits are not given, and the statement as to future profits can scarcely be considered a satisfactory substitute. However, members of the vendor company have agreed to subscribe for 140,000 shares. Those with personal knowledge of the directors may perhaps interest themselves in the undertaking, but the issues are not suitable for the ordinary investor on the advertised information offered.

Charles Sharpe and Co. (1920), Limited.—Authorised capital £200,000 in ordinary shares of £1 each. This is an issue of 150,000 shares at par, and also of 7 per cent. debentures for £50,000 at par. Debentures for £25,000 and 70,000 of the ordinary shares will be taken by the directors and shareholders of the old company. The debentures are "redeemable" at par in 1945, but may be redeemed by the company after 1925 at 102½ per cent. They will be secured by a floating charge on the undertaking and assets. No mention, however, is made of any trustees for debenture holders, trust deed, or specific charge upon the "Freehold premises and other property." The company has been formed to take over the old-established business of Charles Sharpe and Co., Limited, wholesale seed growers, &c., of Sleaford, Lincolnshire. Although it is stated that the business was established early in the last century, profits are shown from 1917 only, and these are given before charging, among other items, debenture interest and directors' fees. Assets are valued at £130,704, and the purchase price has been fixed at this amount. Goodwill has been valued at £25,000. It is a favourable point that freehold property and stock-in-trade have been independently valued. It is rather unusual to find an independent valuation of stock-in-trade. This is a speculative industrial risk as regards the ordinary shares. The investor should not have much difficulty in finding a better secured and more attractive debenture.

Thomas Robinson and Son, Limited. — Authorised capital £450,000, divided into 250,000 ordinary shares of £1 each, and 200,000 7½ per cent. preference shares of £1 each. There are also debentures for £60,000, carrying interest at 5½ per cent., "redeemable" on January 1, 1921. The articles of the company provide that after the extinction of these debentures no further debentures may be created except with the consent of preference shareholders. This is an issue at par of 125,000 of the above-mentioned preference shares and 25,000 ordinary shares. The company acquires the business of engineers of the same name, founded in 1838. Profits are given from 1915. Net assets are valued at £226,577, and goodwill is not taken into consideration. The ordinary share capital has recently been increased from £140,420 to £196,588 by capitalising £56,168 of reserves, but it is stated that property, plant, &c., are taken into account without "any adjustment in respect to the present-day values." Debentures for £40,000 are to be repaid, leaving £20,000 outstanding. The preference shares are a fair industrial risk, while the ordinary shares are speculative.

Fellows Magneto Company, Limited. — Authorised capital £500,000, divided into 200,000 8 per cent. cumulative participating preferred shares of £1 each, of which 190,000 are issued, and 600,000 ordinary shares of 10s. each, of which

75,000 are issued. The 8 per cent. cumulative participating preferred shares are also entitled to 20 per cent. of the net profits after payment of the 8 per cent. dividend. The ordinary shares are entitled to the remaining 80 per cent. of profits. This is an abridged statement offering 250,000 10s. ordinary shares at 18s. 6d. per share, but in an advertised statement mention is also made of 150,000 option certificates. We extract the following information from the advertised statement:—"£100 will purchase 100 ordinary shares and 100 option certificates (and *pro rata*). The annual yield on £100 thus invested is £12 10s. The option certificates entitle the holder to purchase the ordinary shares of the company at 18s 6d per share at any time up to December 31, 1921. Should the price of the shares, in view of the prospects of the company, rise to 25s (which at the present rate of dividend would yield 10 per cent. per annum), the capital increment to be secured on an investment of £100, and on the exercise of the options, will be £57 10s, which, with the annual interest of £12 10s, will bring the total profit to an investor up to £70 in all (of which £57 10s is free of all income-tax charges)." This optimistic estimate may one day materialise, but the shrewd investor will appreciate the fact that the bigger the gain the bigger the risk. We referred to this company in the *Economist* for June 28, 1919 (see page 1183), which notice investors are advised to read.

City of Brussels.—The city of Brussels is about to issue a loan of 100,000,000f for the purpose of funding its floating debt. The issue will consist of 200,000 Bons de Caisse of the nominal value of 500f each, to be offered at the price of 475f each. The loan will bear interest at the rate of 5 per cent. per annum, and it will be "redeemable" on August 1, 1930. The city reserves the right to repay it at three months' notice in the Belgian press any time after August 1, 1925. All Belgian taxation, present or future, to which the issue may be liable will be borne by the city. At the current rate of exchange the price of the bonds to British investors works out at rather less than £10 17s per bond. Full particulars are obtainable from the Banque Belge pour L'Etranger, Sté Ame, 2 Bishopsgate, E.C. 2, which is prepared to transmit subscriptions to Brussels free of charge.

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

Trade in vegetable oils is only on moderate lines, notwithstanding that prices are at a low and generally seasonable level. Consumers, however, only show disposition to do business when immediate requirements have to be satisfied and the market is distinctly in their favour. The trade outlook is not so encouraging as to cause anything like a strong demand, though it is felt that the lower range of values now reached will in due time have a good influence in the direction of trade revival. Linseed oil continues to fluctuate, and is somewhat dearer and firmer in sympathy with an advance in linseed. Meanwhile, demand is on the quiet side. Cotton oils, which have been very markedly on the down grade for some weeks, appear to have about touched bottom, though crude Egyptian is quoted for forward delivery at £5 less than spot. Bombay crude has been in demand, and a fair trade has been done round £45 per ton, naked, ex Hull mill. Refined cotton oils have been disappointingly quiet, in spite of quotations much below last year's controlled prices. Cottonseed, both Egyptian and Indian, has eased off still further, new crop Bombay, arrived, being purchasable at £10 at Hull, where large stocks have accumulated.

Production of both oil and cake is light as is usual at this time of the year. Linseed cakes appear to maintain recent value well, and meet with a steady demand; but cotton cakes are neglected, farmers being in no hurry to lay in stocks for the winter. Doubtless they are looking to plentiful supplies later, and to buying with advantage to themselves.

DOMINION STEEL CORPORATION, LIMITED,
AND CONSTITUENT COMPANIES.

ANNUAL MEETING, 1920.

Report of Board of Directors and Address of R. M. Wolvin, President.

To the Shareholders:—

Your directors have submitted the Consolidated Profit and Loss Account for the year ending 31st March, 1920, and the Balance sheet of the Corporation and its constituent companies as at that date.

PROFIT AND LOSS ACCOUNT.

The earnings for the year after deducting all expenses incident to operations, current repairs, taxes, administrative and selling expenses amounted to $5,532,529.43. After setting aside the sum of $1,266,855.86 for Sinking Funds, the depreciation of plant and properties and $1,004,059.85 for bond interest, there remained a balance of $3,261,613.72 as net profits for the year. During the year the regular dividends were paid on the preference shares of the corporation and the preferred stocks of the Dominion Coal Company and Dominion Iron and Steel Company, amounting in all to $980,000.00. The balance of the year's earnings $2,281,613.72 was transferred to Profit and Loss Account. Four quarterly dividends, aggregating six per cent., were paid upon the common shares outstanding 1st April, 1919, and a proportional amount upon the new shares issued in November, making a total disbursement of $2,029,629.12. The balance at credit of Profit and Loss account on 31st March was $8,211,236.58, an increase of $251,984.60 over the balance at the beginning of the year.

OUTPUT AND SHIPMENTS.

Although every possible effort was made by your directors and the officers of the Dominion Coal Company to maintain the output of the Collieries, it was somewhat less than that of last year.

The total production from all collieries for the past five years was as follows:—

	Gross tons.
Year ending March 31, 1920	3,502,069
Year ending March 31, 1919	3,622,644
Year ending March 31, 1918	3,781,615
Year ending March 31, 1917	4,279,772
Year ending March 31, 1916	5,261,198

On account of trade conditions, operation of the Steel Company's works was greatly restricted during the months of August, September, October and November, and in consequence the year's output of steel was correspondingly reduced. During the last quarter of the fiscal year operations were gradually increased and are now upon a more satisfactory basis.

It will be noted that a new item has been added to the list of materials produced, and that steel plates are now being made in quantity. The following table gives the annual production of the principal classes of iron and steel in the last two years:—

	Year Ending March 31, 1919. Tons.	Year Ending March 31, 1920. Tons.
Pig iron	307,863	184,229
Steel ingots	341,603	219,943
Blooms and billets for sale	47,890	26,165
Standard rails	164,972	68,976
Light rails	..	3,319
Wire rods for sale	26,746	44,436
Bars	1,459	1,245
*Wire	6,043	15,542
Nails	5,508	12,386
Plates	..	3,252

* This includes wire used in the manufacture of nails, shown on next line.

STAFF.

Your directors have pleasure in expressing their appreciation of the services rendered by its officers and by the officers and employees of the constituent companies.

All of which is respectfully submitted.

For the Board of Directors,

R. M. WOLVIN,
President.

PRESIDENT'S ADDRESS.

To the Shareholders:—

As president of the company, there devolves upon me the duty and privilege of moving the adoption of the report of the Board of Directors on the operations of your properties during the fiscal year ending March 31st, 1920, copies of which are now before you.

Upon preliminary examination, it is probable that from a financial standpoint the year's results will be somewhat disappointing to you. You must, however, temper this judgment by a consideration of the conditions existing during the period with which the report in question deals.

The period covered by the present report followed almost upon the termination of the war. A period of adjustment had been generally expected, and although of shorter duration than anticipated, it seriously affected the results of practically the entire year. The prevalent uncertainty resulted in very greatly retarding the operations of our coal mines, and for the first six months of the fiscal year our sales were only sufficient to warrant operating some of our collieries three and four days per week. Similar conditions prevailed in the steel trade, and the steel plant was closed down from August 26th to the end of October.

We were unfortunate also during the navigation season in that we were unable to secure the return of most of the steamships which we had under long term charters. In the autumn, however, we were successful in having delivered to us all of these boats except one, but the dates on which we were able to secure these vessels were such that your company's earnings were very slightly augmented from this source.

COMPETITION FROM STATES.

Our strongest competition will come from the large steel companies of the United States. During the first three years of the war, and prior to the time when the United States threw in her lot with the Allies, the American steel companies accumulated large surpluses, which were not at that time subject to abnormal taxation. This enabled them to write down the cost of existing plants, to build large extensions, thus increasing their output, and to instal every known improvement and labour-saving device tending towards increased output and lower cost. We in our company have great advantages in our properties which I will mention later, but I wish to draw your attention to the conditions which I have just described, as they constituted one of the most potent factors which influenced your directors upon what I consider to be the most important step taken by your company in many years.

I refer to the sale of 50,000 common shares of the Dominion Steel Corporation, and to the appointment of a London Advisory Committee. The sale of these common shares was a most desirable transaction, as the funds were required for the current needs of the company, and the price obtained was a satisfactory one, in view of the conditions.

The London Advisory Committee is composed of the following gentlemen:—

Colonel W. Grant Morden, M.P., Chairman.
Rt. Hon. Viscount Furness, vice-chairman.
Sir William Beardmore, Bart.
Major-General Hon. Sir Newton Moore, K.C.M.G., M.P.
Mr. Henry Steel.
Mr. Benjamin Talbot.
Mr. Mark Workman.

The names of these gentlemen are, no doubt, well known to you, and little comment is required. I might state, however, that Colonel Morden's financial connections in Great Britain are such that excellent facilities for future financing are made available through his co-operation. Viscount Furness is the chairman of the extensive Furness group of English Steel industrials; Mr. Benjamin Talbot is managing director of these companies; Sir William Beardmore is chairman of William Beardmore and Company, shipbuilders, of Glasgow; Major-General Sir Newton Moore is a former Prime Minister of Western Australia, director of the General Electric Company of England, and associated closely with the Australian steel industry; Mr. Henry Steel is chairman of the United Steel Companies of Great Britain, and the Bengal Iron and Steel Company of India.

These gentlemen bring to us long experience in the steel trade of the world. They provide also in the plants which they control a large potential consumer of your company's ore, and as events progress, a purchaser of considerable quantities of pig iron and billets which will become available from the new furnaces which the future will undoubtedly see installed at Sydney.

RESOURCES OF COMPANY.

If we briefly inventory our resources, we find that our steel plant to-day consists of a new by-product coke oven plant, consisting of 120 of the most modern apparatus in existence. We possess also a 110-inch plate mill which has just been completed and put into operation, and is equal to any mill of this character either on this continent or in Europe. Our Rolling facilities also include a 28-inch rail mill, billet mill, wire rod mill and merchant bar mills, and in addition we own plant for the production of various forms of wire products, including nails, barb and galvanising wire, and so forth. We have sufficient blast furnace capacity, but are very short of open hearth furnace capacity, and the situation to-day is that your company finds itself with the greatest known deposits of coal and iron ore, splendidly situated, but possessing a plant with an economical output of only 25,000 tons of ingots per month, with, however, much greater capacity for pig iron production and of finishing mills.

While many valuable additions have been made during the past few years, and numerous judicious improvements have been carried out, much remains to be done in order to place the plant in condition for meeting world competition. Our position as regards the possession of basic materials is, however, unequalled, and given adequate capital, there is nothing to prevent the growth of your company into a strong world position.

Our most pressing need is for a new open hearth furnace plant and for other extensions, which under present-day costs will entail a large expenditure. Given this additional capital, your company will be enabled to take its proper place in world commerce, and to make adequate returns to its shareholders. These improvements will not only enable our working forces to become more productive than with the equipment now available, thus affording a larger return from their labours, but will ensure such profits as to enable the company to give a fitting return to its shareholders. Without these additions and improvements you must realise that your large coal and ore deposits are assets that contribute a small part of what they should to the earnings of the company.

MORE FAVOURABLE CONDITIONS.

We commenced the current year under much more favourable auspices than last year. While our coal properties are not producing as much coal as we have the right to expect, we are fortunate in the possession of an unlimited market. Similar conditions prevail in the steel industry, and we have no difficulty in disposing of every ton we are able to produce. At the present time, three blast furnaces are in operation at Sydney, and we expect that a fourth unit will be put in blast in August. The entire output of our steel works is sold for the balance of this calendar year at attractive figures, and we have every reason to feel optimistic with regard to our company's prospects.

As previously mentioned, four of our five long term chartered steamers were delivered to us late in the season of 1919. Two of these four vessels have already entered our service for the present season, and we anticipate the return of two further steamships very shortly. We have made arrangements to purchase a controlling interest in the remaining vessel, in addition to which we have an option on the services of the boat for the full term of the original charter, at an attractive rate.

A short time ago a proposal was submitted to your directors to become associated with various other enterprises in the recently organised British Empire Steel Corporation, Limited.

The object is to unite under single control the largest known single deposits of ore and coal, operating coal and ore mines, steel works, steamships, shipbuilding and repair yards and other complementary enterprises. It would be the greatest industrial enterprise in Canada, and promises greater economy and efficiency in the production of coal and steel, the much-needed shipping facilities and organisation for the transportation of the companies' raw materials and finished products, and an outlet for its ship plates.

In addition, there must be many economies to be effected in uniting the various enterprises under one management. I only mention this because of the publicity it has been given. Your directors have been carefully investigating the proposals, and as it is an important matter for the consideration of our shareholders, I hope it will soon be in shape to present to you, and when the directors so decide, a special meeting of shareholders must be called to pass thereon.

R. M. WOLVIN.
President.

The personnel of the new Board is now comprised of the following:—

Roy M. Wolvin, president.
Hon. Frederic Nicholls, vice-president.
Sir Henry M. Pellatt, vice-president.
J. N. Norcross, vice-president.

Viscount Furness, Hon. Sir Clifford Sifton, Sir William Mackenzie, Sir William D. Reid, Major-General Sir Newton Moore, Benjamin Talbot, Hon. C. P. Beaubien, Edmund Bristol, K.C., M.P.; Stanley E. Elkin, M.P.; H. B. Smith, J. F. N. Stewart.

The executive committee named at the conclusion of the shareholders' meeting is comprised of the president, the three vice-presidents, Stanley E. Elkin, M.P.; H. B. Smith and J. F. M. Stewart; C. S. Cameron continues as comptroller, secretary and treasurer, with W. A. Doig, assistant secretary-treasurer.

The London Advisory Committee was named as follows:—Col. W. Grant Morden, M.P., chairman; Viscount Furness, Sir William Beardmore, Bart., Sir Newton Moore, M.P.; Henry Steel, Benjamin Talbot, and Commander Sir A. Trevor Dawson, Bart.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, *3 Arundel street, Strand, London, W.C. 2.*

COMPANY MEETINGS, &c.

BANQUE INDUSTRIELLE DE CHINE.

RECORD FIGURES—SUCCESSFUL YEAR.

The ordinary general meeting was held on June 25th.

The auditors, in their report, deal successively with the various chapters of the balance-sheet for the financial year under review. We have no comment to add to this. We indulge the hope, gentlemen, that the results obtained will appear satisfactory to you. They are the outcome of seven years of sustained effort, during which there is no difficulty which we have not had to contend against. We have overcome these difficulties, and among the results which we are now able to present to you, the moral strength imparted by such a beginning is by no means the least valuable.

As we already had occasion to acquaint you at our last ordinary general meeting, we have during the financial year effected a first increase of our capital, which has been raised from 45,000,000f, the initial capital, to 75,000,000f. The continuous development of our operations necessarily compelled us very quickly to contemplate a second increase. With that object we called you on November 28, 1919, to an extraordinary general meeting, in order to ask you to extend from 100,000,000f to 250,000,000f, the power given us by our articles to increase our capital without having to call a meeting for each increase. We then decided to increase our capital from 75,000,000f to 150,000,000f, by the creation of 150,000 new shares. This operation was carried out at the beginning of the present financial year, and was crowned with the most complete success. We were this time able to make our arrangements in order to give satisfaction to the largest possible extent to a large number of our friends and clients in the Far East, who were desirous of being numbered among our shareholders. Our branches number 22, as follows: 10 in China—Pekin, Tientsin, Mukden, Shanghai, Foochow, Swatow, Hankow, Canton, Hong Kong, Yunnanfu; one in Oriental Siberia—Vladivostock; one in Japan—Yokohama; three in Indo China—Saigon, Haïphong, Hanoï; one in Straits Settlements—Singapore; three in France—Paris, Lyons, Marseilles; one in England—London; one in Belgium—Antwerp; one in United States—New York. Each of these agencies, situate in one of the important centres of international trade, represents for us a business element of considerable value. In their aggregate they form a structure, the strength of which we are already able to measure. We do not think we shall surprise you, however, if we add that this is only part of our programme. Other agencies are being prepared, and each one will be opened in good time. You can rely on us, gentlemen, to prosecute this task with the perseverance, the energy, and the perfect indifference to malevolent criticisms of which we have already given you proof. We are conscious that we are engaged in building up a work of national interest; against such a feeling nothing can prevail. In China our position is strengthening steadily and surely. Chinese circles more and more realise the devoted sympathy which they are sure of finding from the agents, and, on the other hand, we have gained with European clients a position of daily growing importance.

Certain difficulties of a political character have induced the Chinese Government to defer for some time the carrying out of the works for which we have concluded contracts with it, with which contracts you have been made acquainted. We have substantial reasons for thinking that this position is drawing to an end. In Indo-China the success of our agencies likewise never fluctuated for a moment. As regards China, the conclusion of peace marked the beginning of a period of great prosperity. On the one hand, it meant the removal of all the restrictions entailed by the war to marine transport; on the other hand, the need to replenish stocks, and consequently a considerable demand for the raw materials which this country produces. Therefore the year 1919 beats all the records of previous years. In spite of the high freight and rates of exchange which were no longer thought possible, Europe and America have been insatiable buyers, and the Maritime Customs have witnessed an increase in their receipts to 46,000,000 H. tls., being at the middle rate of 2of, an equivalent of 920 million francs. The receipts of the three previous years, which were themselves record years, were as follows:—

	HT.
1916	37,764,311
1917	38,189,428
1918	36,334,000

The net revenues from the salt tax were $80,636,530, against $71,589,603 in 1918, and $70,627,249 in 1917. The service loans secured on this source of revenue having only absorbed $5,423,090, a balance of $75,213,440 was handed to the Government of Pekin for administrative purposes.

The railway receipts remain practically equal to those of previous years. In this connection, it is desirable to point out that the Chinese Government is anxious to effect the unification of the plant and working methods of its railways. A Commission is at the present time engaged on the study of this question.

The Government has likewise created a special body to deal with all questions relating to the development of trade and industry in China.

On all hands and in all circles we gain the impression of intense efforts, with a view to bringing up the country to the economic level of the Western nations. It is difficult to imagine what the coming into operation of these new forces, which have hitherto remained in abeyance, may mean for the future of humanity.

All elements are on hand to justify enormous possibilities. On the one hand, a region as vast as Europe endowed with natural wealth, unexcelled by that of any country in the world; on the other hand, a population representing one-fourth of the human species, and endowed with all those qualities of intelligence, labour, and sobriety which go to make great nations.

BANQUE INDUSTRIELLE DE CHINE.

REPORT OF THE AUDITORS.

Gentlemen,—In fulfilment of the mandate which you were good enough to entrust to us at your general meeting of June 20, 1919, we have proceeded to examine the accounts of your company for the financial year ended on December 31, 1919.

We have examined the books of account, compared the balances entered in the ledger with the figures of the "balance" and the balance-sheet, and have ascertained these various documents to be in perfect agreement.

Your board afforded every necessary facility for carrying out our task, and all vouchers required have been supplied to us. In addition, our work of auditing was facilitated, owing to the faultless manner in which the books are kept.

We analyse below the balance-sheet and profit and loss account, and give you such explanations as were likely to interest you in connection with them.

The balance-sheet presented to you, showing an increase of 709,313,829f 32c over the previous one, reflects the ceaseless growth of the business of your bank.

BANQUE INDUSTRIELLE DE CHINE.

ASSETS.

	f	c
Shareholders	35,562,000	00
This item shows an increase of 13,593,125f, in consequence of the first increase of capital effected during the year 1919, a number of shares having in addition been fully paid up.		
Cash in hand and at bank	77,936,981	84
This item shows an increase of 54,770,616f 94c.		
Debtor correspondents	105,476,782	34
This figure, distributed over a large number of banks, is higher by 38,811,330f 93c. Owing to the large amount of the balance of operations not set off between agencies, the balances of these accounts have been separated from the heading "Debtor Correspondents," and inserted in the "Debtors' Account." The sum of 105,476,782f 34c consists exclusively of funds in deposit with the correspondent bankers.		
Bills in hand	235,524,203	16
Stocks and financial interests	25,429,252	30
	260,953,455	46
The growth of bills in hand is due to the general development of discounting operations. It shows an increase of 170,233,447f 87c. The stocks and financial interests exhibit a growth of 12,373,011f 79c. It is distributed as to about 13,000,000f in Paris and 12,000,000f in the Far East. As in the preceding years, the stocks are put down at their purchase price. We have examined and checked the stocks and securities in Paris, and found them correct.		
Debtor current account	122,533,372	63
This item is a new one, and is due to the splitting up of other items.		
Sundry advances	282,627,066	27
This item, the increase of which is in proportion to the progress of the available cash funds of the bank, represents advances to private persons, merchants, or companies, guaranteed on stocks, goods, promissory notes, bills, or valuable materials. They are distributed over the whole of the agencies in France and the Far East.		
Real property, fittings, and furniture	41,842,456	71
An increase of 28,816,487f 55c. This increase is explained by the purchases which were required to instal the various agencies.		
Debtors by bills	13,501,502	25
Showing a reduction of 1,492,544f 20c.		
Sundry debtors	118,036,850	50
As we have said above, this item henceforward, in addition to the usual entries appearing under this heading, comprises the balance of the agencies account.		

LIABILITIES.

Capital	75,000,000	00
Statutory reserve fund	781,602	52
An increase of 271,328f 99c.		
Provident funds	3,000,000	00
An increase of 1,000,000f.		
Special reserve fund	900,000	00
A new item constituted by the issue premium on the increase of capital effected in 1919.		
Special reserve fund against depreciation of stock-holdings	1,500,000	00
An increase of 500,000f.		
Fittings and furniture depreciation fund	424,000	00
An increase of 187,000f.		
Current and deposit accounts	675,669,728	86
An increase of 502,435,550f 51c. Nearly half of this sum is made up of accounts deposited for long periods or requiring notice.		
Creditor correspondents	68,839,290	41
An increase of 40,781,683f 97c, which increase, like the previous one, corresponds to the rapid development of the operations of your bank.		
Bills payable	6,407,877	96
Against 1,186,734f 72c in the previous balance-sheet.		
Acceptances maturing	13,501,502	25
A reduction of 1,492,544f 20c.		
Sundry creditors	77,399,978	01
The increase of 44,791,963.93f is the result in particular of the growth in the accounts for collection.		
Loan accounts and creditors' accounts	146,781,855	10
This item comprises the amount of the notes issued in China by the bank, sundry accounts, such as "Domiciliation of coupons, transfers of current funds to the Far East," and accounts in suspense, the settlement of which will take place after the close of the financial year.		
Real properties, annuities account	3,269,862	60
Represents the spread-out payments to be effected in payment of the purchase price of the premises.		

PROFIT AND LOSS.

The profit and loss account shows, including the carry forward, a balance of	16,240,061	33

Your board of directors, after having set aside 7,398,904f 18c to the different reserve and provident funds, proposes to distribute a dividend of 14 per cent., namely, 35f per ordinary share, one-half paid. This distribution, with the allocations provided in the articles (founders' shares, board of directors), amounting to 6,935,078f 80c, leaves available a sum of 2,006,078f 35c to be carried forward. We ask you, gentlemen, to approve the balance-sheet and accounts submitted to you, as well as the distribution proposed to you by your board of directors.

Paris, June 4, 1920.

A. MEILHAN.

RENE FAVAREILLE,
Honorary Master of Request in the Councils.

RESOLUTIONS

PROPOSED TO THE ORDINARY GENERAL MEETING OF JUNE 25, 1920.

FIRST RESOLUTION.

The general meeting, after having heard the report of the board of directors and that of the auditors, approves in all parts the report and accounts for the financial year ending December 31, 1919, as presented by the board of directors, as well as the application of the reserve funds, and resolves to distribute the credit balance of the profit and loss account in the following manner:—5 per cent. to the statutory reserve fund, 745,904f 18c; allocation to provident fund, 3,000,000f; first dividend of 6 per cent. on paid-up capital, 2,366,280f; 10.15 per cent. to the board of directors and the management on the excess profit of the year 1919, which is 8,805,899f 48c, namely, 893,798f 80c; real property reserve fund, 3,000,000f; fixtures and furniture depreciation fund, 553,000f; second dividend of 20f per share to the 147,000 ordinary shares, 2,940,000f, and 245f to the 3,000 founders' shares, 735,000f—3,675,000f; balance forward, 2,006,078f 35c; total, 16,240,061f 33c.

A first distribution, which absorbed 2,366,280f, having been made to the 150,000 shares, February 1, 1920, the balance to be distributed amounts to 3,675,000f. Consequently the total dividend for the financial year is fixed at 35f for ordinary shares half paid; 50f for ordinary shares fully paid; 260f for founders' shares half paid; 275f for founders' shares fully paid; less (1) the tax of 5 per cent. on the total income of the year on all shares; (2) the transfer tax on bearer shares. The balance of the dividend will be payable after June 28, 1920, at the rate of 18f 25c per ordinary share half paid; 17f 50c per ordinary registered share fully paid; 16f 36c per ordinary bearer share; 232f per founders' share half paid; 231f 25c per founder registered share fully paid; 230f 11c per bearer founder share.

SECOND RESOLUTION.

The general meeting being called upon under Article 22 of the articles to proceed to the partial renewal of the board of directors, re-elects as directors for six years: Messrs G. Ballu, R. de Cerenville, and E. Henry, retiring directors. The office of these directors will terminate at the general meeting called upon to examine the accounts for the financial year 1925.

THIRD RESOLUTION.

The general meeting appoint Messrs. René Favareille and Albert Meilhan auditors for the financial year 1920, with powers to act jointly or separately, in accordance with article 31 of the articles.

FOURTH RESOLUTION.

The general meeting, in so far as needful, and in conformity with article 40 of the law of July 24, 1867, gives authority to the members of the board of directors to take or retain an interest, direct or indirect, in the undertakings or contracts made with the company or for its account.

BANK OF BRITISH WEST AFRICA, LIMITED.

EXPANSION OF THE BANK'S BUSINESS.

The 26th annual general meeting of the Bank of British West Africa, Limited, was held, on the 21st instant, at Cannon street Hotel, London, the Right Hon. the Earl of Selborne, K.G., G.C.M.G. (the chairman), presiding.

The secretary (Mr G. B. Bennett) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, first dealt with the figures appearing in the balance-sheet, and pointed out that the paid-up capital was now £800,000 as compared with £580,000 in the previous year, and that the reserve was now half the amount of the paid-up capital—namely, £400,000, as compared with £250,000. Current accounts and deposits amounted to nearly £12,000,000 as compared with £6,500,000. The profit and loss account showed that the net profit was £125,147 as against £83,767 in the previous year. Those figures certainly indicated a very remarkable increase of business, but they were greatly affected by the inflation of values which had been current throughout the period covered by the accounts.

It had been decided to bring into operation the staff profit-sharing scheme to which he referred two years ago. Out of the profits for the past year they were taking a sum sufficient to pay to an account for each eligible employee now in the service of the bank 10 per cent. upon the salary he or she received in that year. They were also improving the position and prospects of the junior members of the staff sent out to West Africa, and were introducing a new grading scheme for their native African staff which would give them larger increments and increased opportunity of advancement.

PROSPERITY OF WEST AFRICA.

They must be prepared to see and, indeed, in the general interest, they must welcome, a general decline in the value of commodities, although such periods could not be free from anxiety, especially if price movements were rapid. West Africa, however, was fundamentally sound and prosperous, and when the new basis of values was established there would surely be a revival of trade, and statistics should disclose an increasing turnover, not based upon artificial values, but upon quantities. This fundamental soundness of trade in West Africa justified the programme of railway and harbour construction which Sir Hugh Clifford and General Guggisberg had so much at heart in Nigeria and the Gold Coast.

When addressing the shareholders a year ago he suggested that a new coinage, other than of silver, might have to be considered, and it was satisfactory to know that a new coinage of mixed metal was now being struck for British West Africa, and supplies would be available in considerable quantities in the final quarter of the present calendar year. New branches had been established by the bank at Bradford, England, and at Bekwai and Dunkwa, in the Gold Coast Colony, and they had experimentally opened a branch at Duala, Cameroons. When they had a trained staff available it was proposed to assist trade developments by opening more branches. Their Morocco business continued to make progress, and they had established a branch at Rabat, which was the seat of the headquarters of the French Protectorate Government. The branch at Alexandria had been active, and they had recently moved into the commodious premises formerly occupied by the Deutsche Orient Bank. It was proposed, within the next two or three months, to convert the agency at Teneriffe into a fully-equipped bank. The reopening of the Hamburg branch was under consideration.

PROPOSED INCREASE OF THE CAPITAL.

An extraordinary general meeting would follow that one for the purpose of increasing the authorised capital of the bank. It had been their custom to issue new shares at frequent intervals, and this policy they proposed to continue, keeping pace with the bank's needs. The directors' confidence in the steady expansion of the business led them to ask the shareholders for authority to increase the capital. The board proposed, therefore, that they should have powers to issue, as and when they might elect and upon such terms and to such allottees as they might in what they believed to be in the best interests of the bank decide, 200,000 new shares of £10 each, £4 paid, thus doubling the existing capital of the bank. These were not times when new capital was easily obtained, and they had no intention of offering the shares at any very low price. The claims of existing shareholders would not be overlooked if it was thought desirable to issue new shares at a price substantially less than the current market value.

Mr Geo. W. Neville seconded the motion, which was carried unanimously, after the Chairman had replied to several questions.

The retiring directors and auditors were re-elected, and at an extraordinary general meeting the proposal to increase the capital was unanimously agreed to.

BRITISH EMPIRE TRUST COMPANY, LIMITED.

DIVIDENDS MAINTAINED.

INDUSTRIAL BANK BUSINESS.

The nineteenth ordinary general meeting of the British Empire Trust Company, Limited, was held, on the 20th instant, at the Liverpool street Hotel, London.

The secretary (Mr H. Bower Clark, A.S.A.A., F.C.I.S.) read the notice calling the meeting and the auditors' report.

Mr J. Davidson (managing director), who presided, said: Gentlemen,—the chairman of the company, Mr Horne-Payne, regrets that owing to ill-health he is unable to be present to-day. He has, however, sent me a speech which, with your permission, I shall have much pleasure in reading:—"The year under review has been marked by a heavy and persistent decline in the market value of securities generally. Nevertheless, I am glad to say that, after writing our investments down to the lowest market values and providing in full for all depreciation, we are able to recommend you to authorise the payment of the same dividends on the preferred and deferred shares as last year—namely, 5 per cent. and 7 per cent. respectively. I think the shareholders will agree that it is satisfactory to receive these dividends and to know that the capital of the company is intact with a margin of over £18,000, notwithstanding the heavy fall in prices.

"The accounts are clearly stated and do not, I think, call for any explanations. If you will turn to the profit and loss account you will see that the ordinary income of the company from trusteeships, registrarships, and secretaryships, and from interest and dividends on investments, is well maintained. It shows an improvement of £6,000 over that of the previous year, and had it not been necessary to provide the item of £12,647 on the other side of the account for depreciation, the proceeds available for distribution would have amounted to over 8 per cent. on the preferred ordinary and 10 per cent. on the deferred ordinary shares. The only sound policy, however, is to provide fully for depreciation in values. The effect of so doing is, of course, to restrict for the time being the amount available for dividends; on the other hand, the credit of the company, which is so important from the point of view of obtaining and carrying through future business, is maintained on an unquestionable basis. Another advantage which results from writing down of investments, is that while the intrinsic value of the securities remains unimpaired, the lower values placed upon them increases the yield proportionately, thus increasing the company's revenue. I can confidently assure the shareholders that the position of the company is stronger to-day than it has been at any time since 1914.

FINANCING OF INDUSTRIAL UNDERTAKINGS.

"At an annual meeting some years ago I ventured to forecast that on the conclusion of hostilities there would result a tremendous demand for capital for industrial purposes, and your company, in anticipation of this demand, decided to adopt as part of its programme the carrying on of the business of an industrial bank. My forecast has proved to be correct. During the past 12 months we have been flooded with financial proposals from industrial undertakings of many and diverse kinds. Your managing director has investigated a large number of these proposals at an immense expenditure of painstaking labour, and we have taken up and are financing those which, after careful consideration, appeared to us to offer solid ground for safe investment and future profit. This branch of our business is developing satisfactorily, but present conditions are still far from normal, and it is necessary to proceed slowly and with great caution. We find that applications for capital which come under our notice may be divided into three classes: firstly, those for the recapitalisation, frequently involving amalgamation, of existing enterprises; secondly, those for the starting of new enterprises; and thirdly, those for additional capital for existing enterprises. With regard to the first class—viz., recapitalisation and amalgamation, there are a large number of enterprises whose whole position has been changed by conditions arising out of the war, and which are justified in recapitalising, but there are a still larger number which seek recapitalisation upon the strength of large profits earned during the war or on an increase in the value of their assets or on the two combined. I fear much money will be lost owing to creations of capital based upon such inflated values, and that dividend expectations founded upon profits due to war conditions or exceptional opportunity can only result in disappointment.

"With regard to the second class—viz., the financing of new enterprises, our experience is that, in many cases, the estimates of anticipated profits are based upon a level of prices obtainable only in consequence of scarcity arising from restricted output consequent in some cases on the interruption of the supply of raw materials from usual sources, and in others on the dislocation of industry in other parts of the world from which competition must sooner or later recommence. It is evident that the greatest caution is necessary in the financing of such enterprises. With reference to the third class—viz., furnishing of additional capital for existing undertakings, there are many sound companies to whom further capital is an absolute necessity on account of the higher wages they pay and the higher cost of materials apart from extending their business. It is to this class of enterprise that your company is devoting its attention and seeking to be of assistance, and in doing this we believe that we are making the best use of our resources in the interests of British trade. I am satisfied that for many years to come there will be no lack of opportunity of doing remunerative business of this class. I have no hesitation in encouraging you to look forward with confidence to the future progress and prosperity of your company."

No questions being asked, Mr Davidson then moved:—"That the accounts for the year ended April 30, 1920, and the reports of the directors and auditors thereon be received and adopted."

Mr T. Blundell Brown seconded the motion, which was unanimously carried.

THE DIVIDENDS.

The Chairman then proposed:—"That the payment of the dividends on the 5 per cent. cumulative perpetual preference shares for the year be approved, and that the following dividends—viz., at the rate of 5 per cent. and 3 per cent., making 8 per cent. per annum on the employee's profit participating shares from the date of allotment to April 30, 1920; 5 per cent. per annum on the preferred ordinary shares, and 7 per cent. per annum on the deferred ordinary shares, be and they are hereby declared in respect of the year ended April 30, 1920, payable to all shareholders of record on July 20, 1920."

Mr N. Scott-Russell, M.Inst.C.E., M.I.E.E., having seconded the resolution, it was unanimously approved.

On the motion of the Chairman, seconded by Brigadier-General E. F. O. Gascoigne, C.M.G., D.S.O., the retiring directors (Sir William Mackenzie and Mr N. Scott-Russell) were re-elected; and the auditors (Messrs Robertson, Hill, and Co.) were reappointed, on the proposition of Mr Coleridge Simpson, seconded by Dr Smythe.

Dr Smythe proposed a vote of thanks to the chairman and directors, and this was seconded by Mr W. Kennedy, and unanimously accorded.

Mr Davidson having briefly acknowledged the vote, the proceedings terminated.

ANGLO-SCOTTISH TRUST, LIMITED.

CONTEMPLATED NEW ISSUES.

The statutory meeting of the Anglo-Scottish Trust, Limited, was held, on the 21st instant, at Winchester House, Old Broad street, London, Sir Charles John Stewart, K.B.E. (the chairman), presiding.

The secretary (Mr John Davidson Beattie) having read the notice convening the meeting,

The Chairman said: Gentlemen, this is the statutory meeting of our company, held under Section 65 of the Companies' Act, 1908. It is therefore purely a formal meeting. You will have received the statutory report of the company, and will have observed the particulars which are given in that report. You will appreciate that the time for the formation of our company was a unique one, in view of the opportunities which now offer themselves for the profitable employment of funds, and we are in the happy position of having these funds at our disposal. Business has been freely offered to us, and, in spite of what some consider rather depressed conditions, various attractive investments have not escaped our notice.

We are contemplating making two or three issues in the course of this year under conditions which we trust will ensure that the capital so issued will stand at a substantial premium in the near as well as the distant future as far as caution, judgment, and foresight can tell, and we shall, of course, take care that our shareholders will be afforded an opportunity of participating in these issues. We are ready and have the necessary facilities at our disposal to assist in the development of industrial enterprises where the present mode of Government taxation does not too much cripple enterprise or excessively encroach on financial resources, which are so necessary for future development and increased production. At the same time, the present basis of taxation hardly offers an inducement to us to assist new enterprises which in particular would be so severely handicapped by the operations of the present Finance Act. We have extended an invitation to Sir Percival Perry to join our board, and I am sure you will agree that his co-operation will be a valuable asset to our company. Sir Percival has accepted our invitation as from September next, on his return from the United States. In accordance with the Companies Act, any shareholder present is entitled to discuss any matter relating to the formation of the company or arising out of the statutory report, which is in your hands, and I shall be happy to deal with

any questions those present may care to ask. I now beg to move the adoption of the report.

Mr T. M. McAlpine seconded the motion, which was carried unanimously, and a hearty vote of thanks to the chairman and directors concluded the proceedings.

SOUTH-WEST AFRICA COMPANY, LIMITED.

COMPANY'S CLAIMS ON GERMANY.

The ordinary general meeting of the South-West Africa Company, Limited, was held, on the 21st instant, at Winchester House, London, Mr Edmund Davis (the chairman) presiding.

The Chairman, in the course of his speech, said: The year's operations resulted in a balance profit of £4,738, about £1,000 less than in the previous twelve months. We have sent in to the clearing office a claim formulated under the conditions of the Peace Treaty, the claim being for cash, interest on loans and dividends on securities deposited with our bankers in Berlin, which at the pre-war rate of exchange amounts to about £590,000, to which must be added interest during the war period upon a large portion of that sum. In addition, we intend—as soon as the forms are ready—to submit a further claim through another department for securities realised by the German Government during the war period.

There is no reason to doubt that under the Peace Treaty the whole of these claims will be met, and these amounts, with the cash we have in hand and our securities inscribed or deposited in London—even if realised at present prices—make our cash assets approximately £1,200,000, leaving aside the question of the value of the whole of the assets inscribed or deposited in Germany, as set out in our report, to say nothing of the value of the Damaraland Concession itself.

As far as our property is concerned the Union Government of South Africa has appointed a Commission, which is examining and reporting on all concessions granted or recognised by the late German Administration, and we expect our case to be heard at a very early date. We expect a satisfactory result, and as soon as this matter is settled we intend to take active steps to turn our land to account. We lately had an opportunity of dealing with our Rietfontein property—an opportunity which enabled us to rid ourselves of an embarrassing pre-war agreement—and have disposed of the farm, an area of about 31,000 acres, for £31,000, and have received the first instalment of £10,000, the balance remaining on mortgage and payable in instalments, with interest at 6 per cent., the last instalment falling due in 1927.

Pending the findings of the Concessions Commission we have not considered it advisable to incur any heavy expenditure in the territory, and have restricted our operations to a few transactions we considered absolutely necessary to carry through, and only incurred some expenditure in investigating propositions which we thought, if of value, might have fallen into other hands.

The report and accounts were adopted.

ENGLISH SEWING COTTON, LIMITED.

LARGE EXPORT BUSINESS.

The twenty-second annual meeting of the English Sewing Cotton Company was held at the Midland Hotel, Manchester, the chairman (Mr Herbert Morgan) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The year has been an eventful one for the company in several respects. The alteration in the company's articles of association and the capitalisation of reserves, foreshadowed at our last ordinary general meeting, have been duly completed.

Referring now to the results of the year's trading, the net profit for the period shows an advance from £533,742 to £730,123. As I have already mentioned to you on previous occasions, and wish to emphasise again to-day, the bulk of our profits on sales of sewing cottons is made in the foreign markets and not in the home trade. In fact, if it had not been for our foresight in making purchases of raw materials in advance of our requirements the prices charged to the consumer in this country would have been considerably higher.

The nominal authorised value of the shares of the common stock of the American Thread Company has been increased from $5 to $10 per share, and the amount paid up on the shares has been increased from $5 to $7.50.

This increased capitalisation was secured by the appropriation of $3,000,000 taken from the various reserve accounts of the American Thread Company. Though the rate of dividend paid this year is reduced, the amount actually received by us on our investment is slightly more, due to the increased capital on which the distribution is made. During the year two of your directors have paid a visit to the company's property at Armentieres, which was virtually destroyed during the war. The unreasonable delay which has taken place in our own Government's dealing with the question of compensation to British firms who have suffered war damages in France must result in serious losses to those who, like ourselves, see the French competitors getting a long lead in the re-establishment of their businesses. You will see that we are recommending a further appropriation of £27,680 to the pension fund for the company's employees, bringing it up to a total of £75,000.

We are pleased to again acknowledge the loyal and efficient service rendered throughout the year by the staff at head office and our various mills.

The report was adopted *nem. con.*, after being seconded by the vice-chairman (Mr Henry Harrison).

† Rates lowered ½% on Jan. 2, 1918, and lowered ½% on Feb. 14, 1918, but raised ½% on Oct. 6, 1919, and ½% on Nov. 6, 1919, and 1% to 5% on April 15, 1920.
‖ Lowered from 3¼% to 3% on June 5, 1918, but was raised to 3½% on July 31, 1919, to 3¾% on Oct. 6, 1919, to 4¼% on Nov. 6, 1919, and 5¼% on April 15, 1920.
* Changed from 4¾% to 4% on Dec. 27, 1917, and from 4% to 3½% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3⅜% (July 14 to August 15, 1919, period of daily sales); three months, 3½%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4½%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4½% to 5½%, and the six months' rate from 5% to 5½%. On March 19, 1920, daily sales of six months' Treasury bills at 5½% were replaced by twelve months' Treasury bills at 5½%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5½% to 6½%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

		British India	75,056
Total value of imports of gold.....	852,089	Total declared value of exports registered in the week	424,156

Messrs Samuel Montagu and Co. write, on July 22nd, as follows :—" Gold : The Bank of England gold reserve against its note issue is practically unchanged, being £121,470,010, as against £121,469,785 last week. A moderate amount of gold came into the market this week, and was mostly taken for India and the trade. A small amount was purchased for America. Silver : On the 16th instant a reaction set in which ultimately carried the price for cash delivery to 52d on the 17th inst ; at the same time, the premium on prompt delivery shrank to ½d. On the 20th instant a fresh upward movement began, owing to some buying on account of Indian bazaars for shipment and to cover bear sales. On the 21st a rise of 2½d was recorded in the quotations for spot and forward deliveries. The fact that supplies during the week have not been plentiful is accountable for the irregularity of the market. It is reported from Germany that Mexico is taking steps to regain her old position as the largest silver producer in the world. All the mines, even those hitherto regarded as unprofitable, are to be worked, partly at the expense of the Government, so as to take advantage of the high value of silver on the world's markets. The Ministry of Commerce has assured special advantages and guarantees to the private silver-mining companies, in order to facilitate production. The rise in the market price of silver has proved a fruitful source of embarrassment in connection with Siamese currency. The tical having ceased to be protected by its intrinsic value, the Government had recourse to notes of the denomination of one tical, and also sought to check the drain of silver currency by issuing in January, 1919, an amendment to the Paper Currency Act, making notes temporarily inconvertible for a period of six months ; this period has since been renewed. Further, it was necessary to issue a new subsidiary silver coinage, consisting of pieces of 50c with a reduced fineness of 650, the tical of 900 fine being melted down for the purpose. Notwithstanding this reduction, the continual and phenomenal rise in the price of bar silver compelled the Government to raise the theoretical value of the tical on three occasions. It may be mentioned that the theoretical unit of the Siamese monetary system was fixed in the Gold Standard Act of the year 1908 at 55.8 centigrammes of pure gold, the silver tical containing 13.5 grammes of pure silver having a value equal to 55.8 centigrammes of pure gold. The great variation in the Indian exchange owing to currency changes has made it necessary to prohibit—subject to slight concessions to immigrants—the importation of Indian coin and currency notes in the East Africa and the Uganda Protectorates and in the Tanganyika territory :—

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

Securities (Indian Government) ..	3,555	3,780	3,780
Securities (British Government) ..	3,727	3,278	3,277

The coinage during the week ending 15th instant amounted to 3 lacs of rupees. The improvement in the proportion of the metallic reserve and the note issue has greatly increased recently. It was 49.7 per cent. on May 7th, on July 15th it had risen to 57 per cent. Most of the improvement consists of silver coin, which was shown as 3,920 lacs on the former and 4,698 on the latter, although the total note issue had contracted by 506 lacs in the meantime. As we pointed out when the embargo upon the import of silver into India was removed, coined rupees would probably come out from hoards, one strong reason for secreting them having disappeared. The stock in Shanghai on the 17th instant consisted of about 38,050,000 ounces in sycee, 19,300,000 dollars, and 2,610 bars of silver, as compared with about 37,600,000 ounces in sycee, 19,500,000 dollars, and 1,360 bars of silver on the 10th inst."

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and corresponding periods in previous years are as below :—

Reports and Notices.

Mr Stanley J. Passmore, of Messrs Langton and Passmore, a director of the Commercial Bank of London and of some of its associated companies, has joined the board of Eltringhams, Limited, the shipbuilders.

The directors have appointed Mr Sydney F. Butt as City manager, as from June 28, 1920. The directors have also appointed Mr Trevor Wallis as their resident secretary at Bristol, as from June 28, 1920.

The Rt. Hon. Viscount Duncannon has been elected a director of the San Paulo (Brazilian) Railway Company, Limited.

GOVERNMENT STOCKS, &c.

FOUR PER CENT. EXTERNAL DEBT OF GUATEMALA.—The Council of Foreign Bondholders are informed by the Consul General of Guatemala at Liverpool that he has received a communication from his Government, which contains the text of a note addressed by the Guatemalan Minister of Finance and Public Credit to the Minister of Foreign Affairs on June 5, 1920. This note states that "it is in the interest of the new Government to maintain the credit of Guatemala abroad, a purpose which cannot be effected if the interest on the external debt is not punctually paid. Consequently, I beg you to inform our Consul General at Liverpool that he can assure the bondholders that the Government of Guatemala will duly fulfil their agreements."

NICARAGUA.—The Council of Foreign Bondholders have received from the Collector-General of Customs in Nicaragua a report dealing with the year 1919, in which it is stated that the financial plan of 1917 has proved a great success; that the Government of Nicaragua has a surplus in its Treasury at the end of each year instead of an increasing deficit; that three years ago the finances of the Republic appeared to be in an inextricable mess, but that, owing to the wise methods of the financial plan, they have been placed in a condition easily handled, and Nicaragua has become a financial beacon in Latin America. As regards the current year, the report says that the general revenues for the first six months were expected to be considerably in excess of the estimates, so that the surplus would more than suffice to pay off all the outstanding funding certificates and all the arrears of sinking fund on the bonds of 1909.

REPUBLIC OF NICARAGUA GOLD BONDS, 1909.—With reference to the above bonds, the Council of Foreign Bondholders have received a telegram from the bankers in New York notifying the payment of the July instalment of the debt service in accordance with the arrangement of May 25, 1912.

MISCELLANEOUS.

CUBAN PORTS COMPANY—HAVANA MARINE TERMINALS, LIMITED.—The voting trust certificates representing shares in Havana Marine Terminals, Limited, to be given in exchange for Cuban Ports Company shares are now in course of preparation and will be issued very shortly. An option to purchase the entire assets of the company has been granted for a limited period of time to a Cuban Syndicate. The liquidators of the Cuban Ports Company consider it advisable to make this announcement in order that shareholders should not part with their holdings in ignorance of this fact.

* Half-year. † Free of tax. (a) Including arrears. (t) On old capital.

JAMES EADIE, LIMITED.—The report for the year ended March 31, 1920, states that, after providing for upkeep and bad debts and making provision for excess profits duty, there is a net profit of £95,635, which with the balance brought forward, £28,157, makes a total of £123,792. After payment of debenture interest, preference dividend, interim dividend on ordinary shares at 5 per cent., licence compensation fund and other charges, there is available £77,815. It has been decided to pay a dividend of 5 per cent., less tax, on the ordinary shares, making 10 per cent. for the year, and also to pay a bonus of 5 per cent. on the ordinary shares, free of tax, to place £10,000 to general reserve, and to carry forward the balance of £46,565.

MILLARS' TIMBER AND TRADING.—The report for 1919 states that debenture stock has been cancelled to the value of £225,375; for practical purposes the amount of stock outstanding is £219,845. The balance of profit, before deducting interest on debenture stock or depreciation, is £65,300, which with the sum brought forward of £91,678 makes available £156,978. Interest on debenture stock for year and the amount payable to the sinking fund in lieu of interest on debenture stock cancelled amount to £21,920, and the dividend paid on the preference shares for the year ended June 30, 1917, absorbed £51,000, leaving to be carried forward £84,058. Since the date of the account a dividend on the preference shares for the half-year ended December 31, 1917, has been paid, absorbing £25,500, leaving £58,558. The shares of the Purfleet Wharf and Sawmills held by this company were sold in August, 1919, and realised in excess of the amount at which they stood in the books a net sum of £69,412, which has been carried to the credit of depreciation reserve account.

MOND NICKEL.—The report for the year ended April 30, 1920, states that there is a balance to the credit of profit and loss of £531,294. The directors propose a dividend on the ordinary capital of 2s 6d per share, free of tax, in addition to the interim dividend of 1s per share already paid, both free of tax, placing to income-tax £84,000, leaving to be carried forward £114,794. The large stocks of nickel which had accumulated at the end of the war have been substantially reduced during the year, and steps have been taken to ncrease production at the Clydach works.

S. HOFFNUNG AND CO.—The report for the year ended March 31, 1920, states that the trading profits, &c., amounted to £151,882. From this sum has to be deducted head office expenses, interest on deposits, fees of directors and their remuneration as managers, and provision for excess profits duty, &c., leaving a net profit of £98,937, which, with the balance brought forward, £21,529, makes the total available profit £120,466. It is proposed to pay 15 per cent. for the year on the ordinary shares, placing to ordinary dividend special reserve £35,000, to reserve £15,000, and to carry forward £21,716. The total reserves will then be £230,000, and in view of the strong financial position, due to the conservative dividend policy of the company in the past, the directors recommend that the whole of the ordinary dividend special reserve of £75,000 be capitalised.

WALDORF HOTEL.—The report for the year ended January 31, 1920, states that the balance at the credit of profit and loss, after payment of debenture interest, &c., and including £1,715 brought forward, is £44,785. The directors propose placing to reserve fund (making £50,000) £15,585, payment of 7½ per cent. on account of arrears of dividend on the 6 per cent. cumulative preference shares, absorbing £13,974, leaving to be carried forward £4,047. By arrangement with the holders of the first mortgage debentures, which fell due for redemption on June 30, 1921, 20 per cent. of the indebtedness was paid off on July 1, 1920, and the balance renewed until June 30, 1926, at 6 per cent. per annum, the annual sinking fund being increased from £3,000 to £5,000.

OIL OUTPUTS.

ROUMANIAN CONSOLIDATED OILFIELDS, LIMITED.—Production for the month of June, 1920, 2,418 tons. (Office note.—Electric power stopped several days during month owing to heavy storm.)

RAILWAY AND TRAMWAY TRAFFIC RETURNS.

No traffic returns of British Railways have been issued since the Government took control of the Railways at the outbreak of the War. The Government took over control of the Irish Railways as from January 1st, 1917.

RUBBER OUTPUTS AND DIVIDENDS.

In the table below we give the latest and past three years outputs, and dividends for five complete years of a number of Rubber Companies, while the latest reports of Rubber Companies are analysed under our Summary of Profit and Loss Accounts each week. The latest dividends declared appear under Dividend Announcements, and the Rubber Share Market is dealt with in our Stock Market section. Particulars as to the Market Price of the Commodity and other information will be found in our Produce Market Section.

Commercial Reports.

THE CORN TRADE

Mark Lane, Friday Evening.

Weather conditions continue to show slight improvement with a higher temperature, though further rains have fallen in some parts of the country. Most cereal crops have been adversely affected by excessive moisture, many fields of wheat being already beaten down, so that further rains are likely to cause serious damage. A spell of warmth and sunshine is greatly to be desired, and same would considerably enhance harvest prospects. Native wheat is practically out of offer, only odd lots being marketed here and there, but larger quantities of imported descriptions were available, chiefly Australian and North American grades at regulation rates. Prospects for the near future are generally maintained. Although Argentine shipments show a falling off, large quantities were forthcoming from other exporting countries, with liberal contributions from America, and supplies from the latter source will shortly be considerably augmented by the new winter crop, which is much larger than generally expected, and now beginning to be put into circulation. Spring crops in the United States and Canada are thriving well under favourable climatic conditions, and latest Canadian official reports estimate the condition of crops at 100 per cent. The Indian situation continues satisfactory, and exports may be looked for towards the end of the year. Drought conditions in the Argentine have been partially relieved, though further moisture is needed. Latest cables from Australia report an improvement in crop prospects, so that if present conditions hold good a fair surplus may in all probability be expected from the Commonwealth during the coming season. Harvest operations have commenced in Western Europe, but prospects of the wheat crop have been somewhat impaired by recent wet weather, and indications point to a good average yield instead of an increase previously anticipated. The flour trade remains without new feature, and millers experienced only a moderate inquiry for G.R. grade, while small quantities of imported were released at regulation rates. The outlook for future supplies gives good promise in view of the liberal movement of wheat from North America. Shipments were on a larger scale, both to this country and Continent. Maize ruled firm during the early part of the week, while influenced by light shipments from the Argentine, but trade proved very quiet, buyers adopting an attitude of reserve in view of the fact that a large exportable surplus still remains to be shipped from that country. Plate, ex ship, quoted 66s 6d, and ditto, landed, 68s 6d. On c.i.f. terms a fair business transpired in parcels of La Plata at irregular but firmer prices, the tendency being influenced by the rise in freights. Plate, June-July (tenderable), sold 65s 6d to 66s, July-August 63s 6d to 65s 6d, August-September 62s 6d to 65s 6d, and September-October 63s 6d. Cargo of ditto, August 25th loading, sold at 67s 6d. Barley ruled quiet but steady, with spot supplies scarce. English largely nominal at 90s to 110s per 448 lbs. American feed, 44 lbs, landed, 75s, and Canada feed, ex ship, shortly due, 73s. Plate, landed, 80s to 81s per 400 lbs. Oats also firmer, but demand slow on the spot. English quoted up to 80s per 336 lbs. Plate 61s 6d, and American white clipped 62s 6d, landed, per 320 lbs. Moderate sales occurred on c.i.f. terms at generally firmer prices. Plate f.a.q., June-July, sold 51s to 53s, July-August 48s 6d, 47s 6d, and 49s 3d, August-September 48s per 320 lbs. Beans and peas remain quiet of sale at late rates. There was a moderate chartering business in heavy grain and rates ruled firmer from the River Plate, several steamers being taken to load maize from Rosario to United Kingdom at 100s, and Italy 110s, July-August and August-September, while clipped oats rule at 110s to this country. Montreal fixed heavy grain to United Kingdom-Continent at 115 6d, August-September, and Gulf to United Kingdom, September 15th-October 15th, at 13s 6d, though as low as 115 was paid for a prompt boat. India remains dull and largely nominal at about 80s, Bombay to United Kingdom on dead weight. There is a fair inquiry for steamers from the Danube for maize to Rotterdam-Antwerp range at 65s, with 47s 6d paid to Genoa. Time charter business almost at a standstill, and rates easy, especially for large steamers of 7,000 tons upwards, while handy size vessels rule at about 20s per ton per month for a period of six months' trading.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1919-20, contrasted with 1918-19, 1917-18, and 1916-17.—(Particulars of imports of wheat and flour temporarily discontinued):—

	1919-1920.	1918-1919.	1917-1918.	1916-1917.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—There is no material change in market conditions. In every section buyers appear to be waiting for prices to reach the lowest point before resuming operations, and the business actually passing is mainly of a hand-to-mouth character to meet present requirements. Spinners show little disposition to buy tops for forward delivery, but there is a general feeling that most spinners will have to come into the market again in the course of a few weeks. In the meantime all quotations are more or less nominal, but low prices are occasionally accepted on account of the holder being forced to sell. Good average 64's tops are nominally quoted at 7s 6d, and 2-48's yarn out of this quality may be quoted from 15s to 15s 6d per lb. Both spinners and manufacturers are still fairly well employed on old contracts, but the time is drawing near when machinery will have to stand on account of lack of new business. There is a possibility that the operatives will go on strike at the end of this month in connection with their demand for higher wages. At present both sides appear to be determined not to give way, and the employers hold that under existing conditions their recent offer of 10 per cent. advance is generous. The Ministry of Labour are keeping in touch with the whole position, and it is quite possible that if a deadlock is reached the Government will intervene.

The Director-General of Raw Materials, Ministry of Munitions, has issued the following analysis of sales of Government-owned wool from November 15, 1918, to June 30, 1920:—

	Australian. Bales.		New Zealand. Bales.
Delivered for topmaking, scouring, carbonising, up to March 31, 1919	293,384	....	54,532
Allocation sales	380,315	....	97,955
Sales to allies	532,604	....	55,642
Auction sales and sales through brokers between the auctions	1,654,124	....	623,839
Totals	2,860,427	....	831,968

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

It is to be hoped that the rains that Australia is reported to have had recently will do real good, because another year's clip of tender wool like that which is now coming on to the market would send prices out at the bottom for inferior material. The last series of London sales was the occasion of a selection of merinos, both greasy and scoured, such as the trade has rarely seen from the point of view of heavy, dusty, shabby, tender wool. Such wool is not wanted, not even by the Continent, and Australian pastoralists will find this out very quickly when their wool comes on a free market. There has been a certain amount of concern among importers in London for the last six months as to what steps they are to take with the new clip so far as finance is concerned. One or two of the large banks that also make advances on squatters' crops, before these are consigned to London, have been absolutely at their wits' end to know what to do for the best. Stocks of Government-owned wool in New Zealand are so large that it is estimated they cannot be cleared out before the beginning of 1921, and all this means setting back the time at which the new free wool can be handled. Difficulties of transport are such, not only with wool, but also with mutton, that there is a large body of

traders in New Zealand that would be glad of the Government assuming control of these commodities for a further period. This is extremely unlikely, because although the Government has reduced its selling limits on New Zealand wools to a figure below which they cannot go without loss, sales are very difficult in the medium and low qualities, and seeing that the bulk of the New Zealand clip is of this style it is improbable that the Government can be induced to add to its difficulties by buying another year's production.

Business in Bradford shows no improvement, and as a further proof that trade in crossbreds is dead it may be mentioned that low B.A. wools, which can be substituted for New Zealand in most cases, and which can be bought at as much as 10d per clean lb less money, are only moving in very small quantities indeed. This is clear proof that the demand is not large, even at any price.

At the present time the chief trouble in the trade is the establishment of the scale of wages for a period commencing August 1st, the old agreement expiring at the end of July. Operatives are asking that present wages shall be taken as a permanent basis, and an advance of 40 per cent. be granted forthwith. The employers have offered an advance of approximately half this amount, to be varied in accordance with the cost of living. As every advance which has been secured by the workpeople during the last five years has been on the basis of the cost of living, the employers are undoubtedly right in insisting that this clause shall still remain, and the principle be observed during the period of falling prices and bad trade as during the period of rising prices and good trade. The workpeople are not disposed to accept the offer, and a strike is probable. At the present time this will be costly for the employers, as many of them are doing all they can to deliver old high-priced contracts before cancellations are received, but it will be more costly for the workpeople, because new business is so slack that employers would have no incentive to meet the men, and the union funds would probably be entirely exhausted before the matter was settled.

THE IRON AND COAL TRADES.

Our Glasgow correspondent writes :—So far as industrial operations are concerned the past week has been practically a blank one in the West of Scotland working districts. Office business, however, has not been wholly suspended, and staffs report that quite a sheaf of orders and inquiries as to sales and deliveries of iron and steel manufactures are being received by every mail from buyers in the home and export markets. Delivery inquiries apply mainly to forward dates, and as makers are not inclined to that class of business at the moment nearly all communications are turned down. Producers, in fact, are more concerned about getting their order books lightened than to entering up new commitments, regarding the execution of which owing to threatening labour unrest not a little uncertainty exists. Of course, there has been no stoppage at the blast furnaces—they never, unless of dire necessity, go out—and it was anticipated that as a result there would be an accumulation in outputs this current fortnight. One or two steel makers, shipbuilders, marine engineers, structural engineers and heavy motor builders are purposing getting up steam in the middle of next week, but in many connections a restart will not be attempted before Monday, August 2nd. Coal miners have arranged to go down the pits on the 26th inst., and it is understood that the authorities have sanctioned the shipment to allied and neutral ports of 100,000 tons of duff now lying in bings at the pit heads. Coalmasters are of the opinion that the carrying through of that proposition is doubtful—unless the men resile from their present increase in wages policy.

Our Sheffield correspondent writes :—The contraction of business has now become general in the iron and steel trades, although in the main it is still confined to buying and selling, and has not yet affected the position at many of the works. The output of the open hearth steel furnaces is going immediately into consumption. Billets can be obtained more easily from South Wales, but there is no surplus in this district. Engineering work, however, has become very irregular, especially in the automobile section, and in that trade many workmen have been paid off or suspended. This unemployment is due in part to the failure of the iron foundries to supply sufficient engineering castings. Some of the crucible steel furnaces are running a short week. Some makers are booking good business from the United States, but as regards other overseas markets the booking of new orders has almost ceased. To a large extent the Sheffield steel trade is now working on old orders. The demand, both home and foreign, for hand tools used in almost every craft is as brisk as ever. For some of these goods there is business on hand which cannot be completed for periods varying from 12 to 18 months. Increasing competition in manufactured iron and steel is developing in Belgium. France and Germany are also offering goods in overseas markets at lower prices than British. The United States is sending large quantities of heavy steel scrap to this country. The same country has considerable tonnages of billets and merchant steel lying on the seaboard ready to be shipped as soon as the facilities for transport improve. This material will undercut British prices. Up to the present time no reductions in iron and steel quotations have been announced. Pig-iron is as scarce as ever, and users willingly pay the prices to get delivery. All classes of fuel continue to be fairly plentiful, and any cases of scarcity are due to defects in transport. There is rather more doing in house coal, as the public fear the holding up of supplies by strikes. Current prices per ton at pits are :—Best South Yorkshire steam, 33s 2d to 33s 8d; ditto Derbyshire, 32s 8d to 33s 2d; best Tyne steams, 150s and 160s (export); steam cobbles and nuts, 31s 8d to 32s 2d; best hard slacks, 28s 5d to 28s 11d; small slacks, 23s 2d to 24s 2d; branch, 37s 2d to 37s 6d; best Silkstone, 33s 8d to 34s 8d.

Our Middlesbro' correspondent's report, dated July 22nd, is as follows :—Pig-iron.—The scarcity of foundry iron has for some time been pronounced. Furnaces have been working badly and turning out principally forge iron. Inquiry is good and cannot be satisfied. Prices are 217s 6d for No. 3 and No. 4 Cleveland G.M.B. foundry, and 260s for mixed numbers East Coast hematite for home consumption. Manufactured iron and steel.—There is a demand for considerably more steel than our works can produce, and prices are firm. Steel ship plates, home, £23 10s; steel ship angles, home, £23; iron ship angles, home, £30 15s; iron bars, home, £30; steel rails, home, £23 net. Iron ore.—The demand is very quiet. Lower freights have had the effect of checking inquiry.

MANCHESTER, July 22.

The larger inquiry in the market has continued, and in certain quarters an increased business has been done, but buying has been very irregular, and in certain sections practically no relief has yet been met with. An encouraging trade has been done in printing, dyeing, and bleaching cloths, and also fancies for India, most of the operations being of a speculative character. Grey staples, however, continue neglected. Indent business has been at a low ebb, most of the bids from the other side being impracticable. Only odd sales have been mentioned for China, and the conditions in the Far East are rather unsettling. An increased trade has been done for South America in sheetings and printed and dyed goods. Deliveries are now being taken more freely for the Near East, but fresh business of any importance has not been in evidence. Many cheap manufacturers have secured contracts, and are now in a better position to present a stiffer front to buyers. An extensive turnover has taken place in American yarns at hardening rates. There has been very little activity in shipping bundles. Some improvement has occurred in the off-take in Egyptian spinnings, and prices have gone against buyers.

PARTNERSHIPS.

What provision does your Partnership Deed contain as to payment out of capital to a retiring Partner? It would pay you to send a card for particulars of the special life schemes to meet such cases as drawn up by the Western Australian Insurance Co., Ltd. General Manager, G. M. Wyatt, 45-47, Cornhill, London, E.C.3.

Assets exceeding £750,000.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The declines in the price of all classes of hides and skins was more pronounced at the local auction held here in Bermondsey on Thursday, ox and heifers depreciating in value from 3¼d to 2¾d per lb; cows, 1½d per lb; bulls, 1d to ½d per lb; and chance hides, 1½d per lb. Kips were ⅛d per lb lower, and calf skins 2d to ⅛d per lb. Sheep skins made less money, pelts falling away from 9d to 3d per skin, and lambs 1s to 9d per skin. In the foreign hide market business is very quiet, and tanners continue their policy of picking up small parcels for immediate requirements at prices appearing favourable under present conditions. As a matter of fact quotations for foreign hides appear to be arriving at a point which seem to be more attractive, and in some quarters it is expected that slightly more animation will be seen in the near future.

The sole leather market in the Bermondsey district remains very inactive, and the majority of reports are to the effect that the amount of business transacted during the week has been on a smaller scale than the preceding one. Tanners are rather more firm in regard to the question of price, and do not seem inclined to make any further concessions on the recent reductions. The only business passing is in connection with common-grade bends, and a few parcels of these have been moved off in connection with the manufacture of the low-priced boots some firms are manufacturing. Shoulders and bellies receive little inquiry, except for the latter for welting purposes. In rough-dressing leather business is very dull, and hardly anything has been moved off of late. Tanners are not quite so firm in regard to price here, as I understand that there is a tendency to meet buyers in this direction if one can be found.

The upper leather section is experiencing the same dullness as the sole trade, and the only business recently put through has been for cheap box sides for the uppers of low-priced boots. Other sorts are very difficult to move off, in spite of the reduced prices being asked. Shoe manufacturers' reports are to the effect that business is getting less and less, and discharges from the factories increasing.

THE TIMBER TRADE.

(FROM A CORRESPONDENT.)

Although shippers' prices of soft wood timber are fairly well maintained, and spot goods offered at the London auction sales have shown no great fall, there are indications that we have left the top of the market behind us and going slowly on the way to values in sympathy with those industries which are awaiting the time when they can purchase more freely. The fall in the freight market, so long expected but so long delayed so far as timber carriers were concerned, should be the means of bringing prices down quite £3 a standard, though it is quite within the range of possibility that shippers will strive to increase their prices equivalent to the fall in freights. Another strong point in favour of easier prices is the large stocks of Canadian spruce in London, Liverpool, and Manchester, the market for which is still slow, and though this timber for certain purposes is not considered so favourably as Swedish and Finnish wood, it certainly does have the effect of keeping Scandinavian timber to a reasonable level. Then over the past fortnight considerably more than half a million pieces of deals and battens have reached one port alone from Libau, and Memel and Danzig are also shipping a little. With much larger stocks of Swedish and Finnish wood in this country compared with last year, these new shipments, though small in themselves, but not to be despised in the aggregate, are having a decided influence for relief to consumers, besides giving holders of large stocks much food for reflection.

Mahogany prices have fallen considerably during the past month, the minimum having dropped to 7d a foot at the sales. When one considers the quality of some of the logs put up for auction it is wonderful how a minimum of 1s to 1s 2d could have been maintained so long. High-class logs still command good prices, two African veneer logs selling, a few days ago at Liverpool, at 14s 9d and 12s 6d per foot super respectively. The market for home-grown wood is only fair, and the industry is now feeling to the full the results of foreign competition.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, July 23.

Business throughout the period under review cannot be described as fast, though in some directions a little expansion was observable, and most markets disclosed a rather steadier undertone. Demand for all qualities of tea proved very steady, which created more firmness upon values, especially with regard to the finer liquoring descriptions. General trade in fibres was again conducted slowly, though increased interest was manifested respecting new crop positions of jute, while Manila hemp, though quiet, ruled steady, while assisted by the rate of exchange.

SUGAR.—Allotments were on a fair scale. As regards free parcels for manufacturing purposes, trade has relapsed into quite retail proportions, so that a nominal state of affairs predominated and the maximum official rate not obtainable. Honey in limited support but fairly steady, while American syrup proved only saleable at a lower range of prices.

COFFEE.—Fair support was again accorded all home trade descriptions, and prices were fully maintained, but export descriptions still find a very poor outlet. Fine bold Blue Mountain Jamaica sold, 174s 6d, with peas 184s; fair bold Costa Rica, 135s. The terminal market is quiet and easy.

COCOA.—With no recovery in demand, the market is quite nominal.

TEA in good support for all descriptions, and a firm tone prevailed, the finer qualities showing some advance. During the week, 32,600 packages Indian and 24,000 packages Ceylon were brought to auction.

RICE in steady request on export account. Rangoon bran quiet, steady.

SPICE.—Pepper steady, with a moderate demand. Fair black Singapore, spot, sold, 6d; ditto August-October, steamer, 6¼d; Aleppy, spot, quoted 7d; Tellicherry, 7½d; white Singapore, 11¼d; and Muntok, sold, 11½d to 11⅝d. Zanzibar cloves, spot, 1s 3d; pimento, 4d. Tapioca steady. Fair flake, spot, sold, 2d per lb; ditto August-October, sold, 22s; fair Penang seed pearl, spot, sold, 22s; August-October 24s. Small sago, August-October, 32s; sago flour, spot, sold, 20s 6d; ditto August-October, 19s 6d to 20s and 19s 9d. Farina, spot, 27s 6d; August-October 26s 6d. Desiccated coconut, coarse cut, spot, sold, 60s; fine cut, 62s 6d; and medium, 67s 6d.

JUTE.—Market very quiet and nominal for old crop, while new ruled rather irregular. Native firsts, actuals, August-September, new crop, sold, £45 to £46 10s and £45. Calcutta hessians and twills quietly steady.

HEMP.—Manila tends easier, and trade dull. J grade, August-October, sold, £65 15s to £64 10s; K, August-October, sellers. £55; and L, £54. New Zealand dull, at nominally unaltered quotations. There is scarcely any inquiry for East Indian descriptions.

SHELLAC.—Market irregular and weaker. Fair T.N., spot, sold, 670s; August, 640s to 600s; and October, 540s to 525s and 520s.

COPRA was again a slow market. F.M.S. Straits, August-October, London, sold, £47 to £47 10s; F.M. ditto, August-October, Marseilles, £47; Ceylon, August-October, London, quoted, £48. Palm kernels dull. July-September, sold, £31 to £31 5s.

EGG PRODUCTS.—Market steady, with a moderate inquiry. Liquid yolk, spot, sold, 72s 6d; albumen, spot, 4s 2d.

RUBBER.—Market quiet. Plantation crepe, spot, sold, 1s 11d to 1s 10½d; October-December, 2s 1d to 2s 0¼d; ribbed smoked sheet, spot, sold, 1s 9½d to 1s 9d; October-December, 1s 11d. Fine hard Para, spot, quoted 1s 10½d.

MENTHOL.—Kob-Suz, spot, 30s; peppermint oil, ditto, 8s 9d; aniseed, 4s; slab camphor, 7s 3d, all per lb.

OILS.—Linseed firm, spot irregular forward. Spot, net, naked, 77s; July-August, 75s; September-December, 71s 6d. Rape dull. Crude, spot, 70s; refined, 80s. Cotton weak. Crude Egyptian, 55s; Bombay, 45s; refined edible, 75s. China wood easier. Hankow, spot (barrels), sold 110s; July-August, 90s; and Hong Kong, spot, 109s. Palm kernel quiet. Crushed, spot, 65s; extracted, 64s. Palm easier. Softs, July-August, 50s; Lagos, 52s. Coconut dull and weak. Ceylon, spot, 77s; July-August, 75s; Cochin, ditto,

GIRARD TRUST COMPANY
PHILADELPHIA, PENNSYLVANIA.

Correspondence invited.

Capital and Surplus - $10,000,000.

Member of Federal Reserve System.

82s. Soya easier. Oriental, afloat and July-August, 67s; deodorised, 88s. Japan fish slow, with sales, July-August (cases), at 40s. Cod liver steady. English, spot, sold, 50s. Ground nut quiet. English crushed, naked, spot, 75s; deodorised (barrels), 95s. Turpentine active, irregular, and firmer. American, spot, 186s; August, 164s; July-December, 156s.; January-April, 151s. Rosin slow. American, grade B, 45s; F, 56s; G, 56s; K, 57s; M, 57s 6d; WW, 59s; French, F/G, 53s; H, 53s; WW, 54s; extra pale, 55s; Spanish, c.i.f., London, grade F, 43s; extra WW, 47s per cwt. Petroleum steady, quiet. American, spot, 2s 1¾d; and water white, 2s 2¾d per gallon.

OILSEEDS.—Linseed market opened firmer, but quieter since. Calcutta, July-August and August-September, sold, £38 to £36 15s; Bombay, July-August, quoted £37 5s. Plate afloat, Hull, sold, £32 10s to £31 15s; July-August, £33 to £32 10s. Rapeseed firm. Toria, July-August, Hull, sellers, £31; real bold Ferozopore, £29 10s; brown Cawnpore, £28. Cottonseed easier. London Egyptian f.a.q., spot, quoted £15; July-August, £15 10s to £15 paid; Bombay, spot, old, Hull, sold, £9; ditto, new, £10; July-August, £11 10s. Castorseed inactive. Bombay, July-August, Hull, sellers, £29. Gingelly quiet. Chinese, July-August, to Continent, sellers, £38 10s. Groundnuts slow. Chinese, dry decorticated, June-July, £35 per ton.

METALS.—Tin continued in quiet support, the tone being erratic from time to time. Opening rather steadier last Monday on some "covering," cash settled down at £268 10s, three months £273 10s; but selling desire prevailed since, while by the middle of the week cash relapsed to £262 10s (subsequently registered at £263), early and late September registered £265 10s to £266, and three months £269 10s to £266 10s. At Thursday's session the course of prices was rather firmer, but dealings were small, cash being done at £263 10s, and late September £267. Values were carried up at Friday's meeting, the demand being sustained, while cash reached £270, middle of August £272, and three months to £275 10s. English ingots, £269 to £270. Copper: The standard market manifested a lifeless tone at the week's commencement, and the small amount of business done was confined to October at £92 10s to £92 15s, better support being accorded on Tuesday, cash reaching £91 5s, and three months £94, while by the middle of the week realisations led to a decline in prices, cash being done at £90 15s to £91, early August at £92 5s, and three months £93 10s to £93 5s. Little change occurred at Thursday's market, with middle of September realising £92 15s to £92 10s, and three months £93 10s to £93 5s. The tendency was rather firmer on Friday, cash being sold at £91 5s to £91, and three months £93 10s. Electros, £107 11s. Lead firmer, closing at £37 to £38. Spelter dearer, and officially fixed at £42 5s to £44. Antimony: English regulus, ordinary to best, £60 to £63. Aluminium, home brands, £165; export, £185. Wire bars rule at £111 to £113. Quicksilver quoted at £21.

TALLOW. — Messrs Colchesters and Woolner write on July 21st as follows:—The tallow market has been quiet during the week,

Fire Proof since 1858. **THE CHATWOOD SAFE** *Burglar Proof since 1858.*

Copy of letter received—

Gentlemen,

Between Saturday evening, September 23rd, and Monday morning, September 25th, our premises in Great Clowes Street, Broughton, were entered by burglars.

They made a most determined attempt to force the safe. The handle was broken to pieces, the spindle badly bent, and an attempt had been made to drive in the lock. We are pleased to inform you that the safe withstood all attacks.

We found the contents intact, and the following message written on the safe:— "A hard nut to crack, this, mate."

THE CHATWOOD SAFE BOOK.

National Bank of Commerce in New York

President
JAMES S. ALEXANDER

Capital Paid up $25,000,000
Surplus and Undivided Profits over $30,000,000

The Foreign Department of the National Bank of Commerce in New York places complete banking services at the disposal of business throughout the world bringing it in contact with all phases of commerce and industry in the United States.

Resources over $500,000,000

KENNETH H. ROCKEY, *Representative*,
17, Sherborne Lane, King William Street,
London, E. C. 4

NATIONAL BANK OF COMMERCE IN NEW YORK 1839

Distinctive Banking Service

THROUGH its new office at 50 Pall Mall, the Guaranty Trust Company of New York offers banking service adequate to the needs of the largest corporation.

The service, however, is also adapted to the personal banking needs of the individual customer—the Londoner and the American or other visitor resident in the West End. Particular care is taken of the accounts of lady customers.

Through the medium of an efficient staff trained to meet the exacting demands of the individual customer, the facilities of the world-wide organization and connections of the Company are at the disposal of the *clientèle* of this new office.

THE BANK ACTS AS EXECUTOR OR TRUSTEE.

PRELIMINARY ANNOUNCEMENT.

The Brush Electrical Engineering Company, Limited.

ESTABLISHED 1879.

Manufacturers of Steam and Electrical Plant and Rolling Stock.

The area of the Company's freehold property at Loughborough exceeds 29 acres, of which over 11¾ acres are covered by well-equipped and substantially-built workshops.

The connections of the Company are world-wide, and its manufactures enjoy an excellent reputation.

These manufactures consist of two main divisions, viz. :—

Steam and Electrical Power House Plant, including Ljungstrom Steam Turbines, Dynamos, Motors, and Transformers; and

Railway and Tramway Rolling Stock, and Body Work for Motor Omnibuses and other Public Utility Vehicles.

A Prospectus will be advertised on Tuesday, 27th July, 1920, offering for subscription

339,512 Ordinary Shares of £1 each at par.

The Directors estimate that, allowing for increased profits resulting from the extensions of buildings and plant, completed and in progress, and after making adequate provision for Excess Profits Duty and for Corporation Profits Tax, **the profits should be sufficient to maintain the Dividend at 15 per cent. on the whole of the Ordinary Share Capital, including the present issue.**

The full prospectus and application form may be obtained from the London County Westminster and Parr's Bank, Ltd., 21, Lombard Street, E.C.; Head Office, 41, Lothbury, E.C., and Branches, or this form may be used.

THE SECRETARY, THE BRUSH ELECTRICAL ENGINEERING CO., LTD., 15
Maxwell House Arundel Street, London, W.C.

Please send Prospectus and application form.

Name (in full).....

Address (in full).....

.....

ABRIDGED PROSPECTUS.

The SUBSCRIPTION LIST will be CLOSED on or before SATURDAY, the 24th July, 1920.

Application will be made in due course to the Committee of the London Stock Exchange for permission to deal in the Debentures and for an Official Quotation.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION, LIMITED.

(Registered 15th January, 1897, under the Companies' Acts, 1862 to 1893.)

ISSUED CAPITAL:—

110,000 CUMULATIVE PREFERENCE SHARES of £5 each, fully paid, £550,000; 110,000 ORDINARY SHARES of £5 each, fully paid, £550,000 ... ... £1,100,000

Issue of £500,000 Five per Cent. First Mortgage Convertible (Registered) Debentures

FREE OF INCOME TAX.

Repayable by means of a Cumulative Sinking Fund of 3% per annum to be applied by annual drawings at 102% and accrued interest, or by purchase in the market under that price.

The holders of the Debentures will have the right of conversion into Ordinary Shares at any time between 30th June, 1922, and 30th June, 1925, inclusive (with an adjustment for accrued interest and dividend) at the rate of £150 nominal of Debentures for 20 Ordinary Shares of £5 each, or £7 10s. 0d. of Debentures for each £5 Ordinary Share, and such Ordinary Shares issued in exchange for Debentures will rank pari passu in all respects with the Ordinary Shares in existence at the time of conversion.

Issue Price 95 per cent. payable as follows:—

5 per cent. on Application: 10 per cent. on Allotment: 20 per cent. on 1st October, 1920: 20 per cent. on 1st November, 1920: 40 per cent. on 1st December, 1920—95 per cent.

Interest will be payable by Warrant on 1st January and 1st July in each year. The first payment which will be made on 1st January, 1921, will be calculated from allotment and the due dates of the Instalments. Applicants may, if they desire, pay up in full on allotment or on the 1st October, under discount at the rate of 6% per annum.

DIRECTORS.

Insurance Fund	10,283	14 1	
Undivided Revenue	110,699	6 9	
			£1,697,502 8 6

The following figures show the comparative results for the past nineteen years:—

Year.	Connections.	Gross Revenue.	Net Revenue.	Units Sold.	Dividends.
1901	708	£23,248	£8,646	962,958	6%
1902	965	£35.124	£13,133	1,552,775	6½%
1903	1,387	£47,139	£21,587	2,044,681	7%
1904	1,814	£60,243	£29,499	2,760 457	8%
1905	2,451	£72,591	£33,720	3,548,229	8½%
1906	3,060	£89,242	£50,177	4.578,380	8½%
1907	3,721	£103,360	£57,276	5,487,883	8%
1908	4,396	£115,287	£58,188	6,765,792	8%
1909	5,078	£127,575	£67,023	7,856,383	8%
1910	5,695	£137,999	£85,598	8,940,005	8½%
1911	6,383	£151,905	£95,597	10,566,038	8½%
1912	7,030	£173,907	£110,168	12,043,398	8½%
1913	7,597	£188,768	£127,092	14,070,927	9%
1914	8,180	£202,455	£140,609	15,387,471	9%
1915	8,768	£224,206	£162,922	21,081,928	9%
1916	9,461	£237,353	£167,370	23,575,211	9½%
1917	9,741	£259,397	£173,949	26,596,827	10%
1918	9,897	£304,955	£214,095	30,431,132	10% plus 1% Bonus.
1919	10,271	£359,949	£237,206	31,881,710	10% plus 10% bonus in Preference Shares

For the year 1919 the balance available for distribution remaining after charging Depreciation Income Tax and Excess Profits Duty was £147,583. The full annual charge for service (interest and Sinking Fund) of the present issue of Debentures will be £40,300, and is therefore covered more than 3½ times, without allowing for the additional income which should accrue from the expenditure of the proceeds of this issue.

The demand for electrical energy continues to increase, and the current sold is now at the rate of approximately 35,000,000 units per annum. In order to meet this demand and the further demand indicated by applications already received by the Company, large extensions in mains, plant and machinery have become necessary, and the present issue is made for the purpose of providing part of the funds for such extensions.

The present Power Station has a capacity of 21,000 kilowatts. It is intended to increase the capacity to about 42,000 kilowatts.

11,000 Preference Shares are in course of issue to the holders of the issued Ordinary Shares as fully paid bonus shares by capitalisation of part of the Reserves.

Full Prospectuses (upon the terms of which alone applications will be received and Forms of Application can be obtained at the Office of the Company, or from the Company's Bankers or Solicitors.

JULY 31, 1920.

THE MONEY MARKET.

As the end of the month and the holiday season approached there was naturally a considerable diminution in the available surplus, and money became decidedly scarce, and recourse to the Bank of England became necessary. Yesterday, however, the supply was much more abundant, presumably because Treasury bills had been allowed to run off. But it was generally recognised, in view of the autumn demands, the position of the banks as revealed by recent balance-sheets, the weakness of the New York exchange, and the uncertainties of the position in America, that the outlook is not in favour of ease, and discount rates hardened appreciably.

	July 30, 1920.	July 23, 1920.	July 16, 1920.	Previous Rate and Date Changed.

* * * *

The Bank return showed increases of £230,000 in the stock of gold, and £1,270,000 in the note circulation (of which £200,000 had gone to the Bradbury reserve), and a consequent decrease of £1,040,000 in the Reserve. Government securities rose by £3,324,000, while Other fell by £4,600,000, and so the deposits show a decline of over 2¼ millions, Public falling by £1,411,000, and Other by £934,000. The circulation of Currency notes amounted to £361,911,500, an increase of £1,081,000, the total including £6,845,800, called in, but not yet cancelled, as against £7,148,600 a week ago. The reserve of Bank notes was increased by £200,000, and the fiduciary issue is now £314,911,500, or £5,688,500 below the maximum.

* * * *

The following table shows Public Income and Expenditure for the week ended July 24, 1920 :—

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	19·996	Supply Services	7·160
Taken from Exchequer balances	600	Interest on Debt	2·449
		Sundries	608
	20·596		
Less—			
Reduction of debt	10·379		
	10·217		10·217

These operations reduced the debt by a sum of £10,378,646, and caused the following changes, which are reflected in our table of National Debt given in another column :—

	Mln. £		Mln. £
Treasury Bills	+ ·250	Bank of England advances	— 7·500
Treasury Bonds	+ ·365	Advances by Public Departments	— ·300
National Savings Certificates	+ ·150	Other Debt	— ·872
		Surrenders of Bonds, &c.	— 1·512
		Depreciation	— ·660
		Exchequer Bonds	— ·250
		Sundries	— ·50
	+ ·765		— 11·144

Property and income-tax brought in £6,406,000, while Customs and Excise contributed £7,186,000. The floating debt was reduced by just over £7½ millions.

* * * *

The week has been rather uncomfortable for foreign exchange dealers, with a small amount of business offering and further depreciation in some of the leading currencies. The demand for dollars continues unabated, and the rate in New York moves steadily against London. Yesterday's quotation was $3 73½c for cable transfers, and a cent more for cheques on London. Dutch exchange has been adversely affected by the weakness of sterling in America, and the quotation is down to 10 fl 85c for London bills. Italian lire, which on Monday were a fairly firm market, have depreciated, and 70½ are now offered for £1. The Paris market was fairly good on Monday, but the better rate for francs soon brought out sellers, and the quotation for cheques is now not so favourable to France at 48f 73c. Belgian francs, too, have also moved back to 45f 70c. German marks, after falling heavily for a day or two, are in better demand at 157 for £1. Finnish marks are quoted 103. The silver exchanges, influenced by the higher price for silver, have turned against London; the Hong Kong dollar has risen to 4s, and the Shanghai tael to 5s 6d. The Scandinavian centres are not good buyers of London bills for the moment, but rates, after depreciating for a day or two, have moved up, Stockholm to 17.69k and Copenhagen to 23.69k.

EVENTS OF THE WEEK.

July 24th.—M. Krassin arrives at Stockholm.

July 25th.—French occupy Damascus. Greeks enter Adrianople.

July 26th.—Bolshevist note, withdrawing refusal to attend London Conference, published. Report of Railway Rates Advisory Committee issued. Sir Robert Horne receives miners' deputation. Report on Yorkshire Tweed Cloths issued by Profiteering Committee.

July 27th.—British and French Premiers at Boulogne discuss Polish situation. Soviet Government asks Polish delegates to discuss armistice proposals. Poles retreat to East Prussian frontier. General Villa offers to surrender unconditionally. Corporation tax passed.

July 28th.—Finance Bill passes third reading without division. Railway fares to be increased by 16⅔ per cent. from August 6th.

July 29th.—American exchange down to $3.73⅝. Premier reads text of two notes to Soviet Government. Debate on railway fares.

THE COAL MINERS' CLAIMS.

Unlike some previous disputes between the coal-miners and the Government, the latest claims on the part of the miners, and the Government's reply to them, are simple and intelligible. There is not this time that exasperating conflict about figures and periods of account. Both sides are agreed upon the main facts. In May last the Board of Trade advanced the maximum price of home-consumed coal by 14s 2d a ton for domestic supplies and 4s 2d a ton for industrial. This brought both prices together, and did away with the 10s a ton margin of difference established by Sir Auckland Geddes last November in favour of domestic coal. The advance was made in May, in order that the coal fields as a whole should receive for home-consumed coal a price which would just cover cost of production, royalties, and the guaranteed profits to colliery owners. At the same time, the Government control over distribution was removed, and the industry, in so far as home supplies were concerned, was made self-supporting and self-managing. Control was retained over the amount permitted to be exported, or sold for ships' bunkers, and the prices of these were left to be determined by the higgling of the market. In spite of the limitation in the volume of export and bunker coals, the prices for them have been so high that a large profit—about five millions sterling a month—is still being made out of them. That export profit is taken by the Government as the industry's contribution to excess profit taxation.

The whole dispute now turns upon those export and bunker profits. The miners claim that some 36 millions of them should be devoted to subsidising domestic coal supplies to the extent of taking off the 14s 2d a ton put on in May. They claim the balance of some 27 millions in increased wages for themselves. The Government claim that the profits on export and bunker coals are the direct result of war conditions, and that they should belong to the whole nation as a contribution in relief of the burdens of taxation. Suppose, say they, exports were freed from control and home prices were not fixed, there would at once be a competition between home and foreign buyers of our coal which would force up home prices enormously. The result would be huge profits and huge contributions to the Exchequer in excess profits duty. We are taking, they say, the export profits in place of the excess profits. They also point out that the removal of control over exports and over home prices would throw an intolerable burden upon home consumers. The Government, therefore, through the President of the Board of Trade, say quite emphatically that the Exchequer must stick to the profits on coal exports, and that the claims for a reduction in the price of domestic coal and for increased wages to the miners cannot be conceded. The miners are left to take the next step, which may be to ballot their members on the question of a strike to enforce their demands.

While we agree with the Government view of the destiny of the profits on coal exports and bunkers, the miners, in their claim, are neither so greedy nor so unreasonable as they are sometimes represented to be. Verbatim reports of the deputations from the Miners' Federation to the Coal Controller on July 15th, and to Sir Robert Horne on Monday, were sent out to the Press. We trust that this new practice of issuing full reports, which show the points of view of both sides to labour disputes, will be followed in future. The public has the most elementary right to know in advance what is being done by its Government, and what are the risks of serious trouble. The public pays. It is clear from these reports that the miners have an intelligible case. Before the control over coal mines was instituted early in 1917 wages in coal fields were determined by joint Conciliation Boards of employers and men, and were based on the selling prices of coal. The miners quite justly say that if coal were now free from control and the home prices were determined by competition between home and foreign buyers—instead of being fixed by the Government—the high level to which these prices would have rushed would have given them, under their conciliation board system, far higher wages than they are at present getting. The Government would be receiving its excess profit duty, and the miners would be getting wages based on world's prices. The miners do not press this argument very far—it will not bear much pressure—but they point out that, under control, they have sacrificed much, and that control should see that they are fairly treated. Their wage claim is that they should not only be recouped for the rise in the cost of living, but that they should have in addition the Sankey award granted them to raise their standard of living. Sir Robert Horne maintains that they are getting their increased standard of living pay—and illustrates the comparatively low wages of engineers; the miners contend that they are not getting more than the cost of living advance. This disagreement is more about standards than about figures, for neither side displays confidence in the Labour Ministry's index numbers. The miners recognise that they already get as much as the home coal prices will stand, and are really trying to prevent the Government from annexing the export profits. Everything turns on those export profits, and that is why this particular dispute is comparatively simple.

To us it seems clear that the Government's action in May was right. The sooner we do away with subsidies, whether of coal consumers or of railway travellers, the better for our economic health. Even now, with home consumed coal at its present high prices, only four coal fields pay their way on home-consumed coal. They are South Wales, Durham, Northumberland, and Yorkshire. The deficiencies in the other districts are made up out of the common pool. The removal of control over distribution was all to the good, and could not have been effected had not the prices of domestic and industrial coal been put upon the same level. Export profits are things apart. They are accidents of the war—"bits of luck" is the official description of them—and they may properly be taken by the Exchequer. The miners hint that they are annexed in relief of taxation on war profiteers, and here the opposition of the war profiteers to Mr Chamberlain's attempt to make them disgorge, and his inevitable surrender before it, give some colour to this contention. But with the present scale of expenditure, and the present need for redeeming debt, the Government could not afford to lose this "bit of luck," even if it had taken from war profiteers all that the Inland Revenue authorities hoped. The misfortune, a grave misfortune, is that there should be so few coal exports on which to earn profits, and to supply freights for our shipping. It is probably only fear of the home consumer that impelled the Government, though they benefit so largely in revenue from coal exports, to place the adequacy of home supplies before them. The greatest misfortune of all is the low output of all collieries. We could do very well with another million tons a week, but so long as there are perpetual disputes between the miners and the Government our prospects of getting a larger output are not encouraging.

INCREASED RAILWAY FARES.

Mr Bonar Law announced in the House of Commons, on Wednesday, the Government's decision to put into force as from August 6th, the recommendations of the Rates Advisory Committee with regard to increased passenger fares, except in the case of increased workmen's train fares, which are to go up on September 1st. The Report

of the Rates Advisory Committee, setting forth the fare proposals, is now available in the shape of a White Paper (Cmd. 857, price 2d net). The Committee at the outset were informed that the deficit which their proposals should be framed to meet was one of £54,500,000 per annum. The representatives of the railway companies, in the first place, submitted that passenger revenue should be made to supply 40 per cent. of the increase, and freight revenue 60 per cent., and suggested that the additional £34,250,000 from passenger traffic should be raised in the following manner:—(1) £21,700,000 by increasing ordinary passenger fares so as to be 100 per cent. above pre-war rates; (2) £6,000,000 and £2,800,000 respectively by raising season and traders' tickets and workmen's fares in similar proportion; (3) £3,750,000 by various increases in the charges for merchandise by passenger trains, mails and cloak-room charges. These calculations were made on the assumption that the new fares would be introduced on September 1st, and continued only until June 30, 1921. Subsequently revised figures were submitted showing that if the increases could be introduced on August 1st, and continued to July 31, 1921, the annual rate at which additional revenue would have to be raised from the passenger train service would be reduced from £34,250,000 to £26,400,000. If the imposition of the increases were delayed until September 1st, then the sum to be raised would be £29,300,000. The Committee weighed up the urgency and loss by postponement against the inconvenience to holiday-makers, and compromised by suggesting August 5th as the date, leaving Bank Holiday travel and early August return ticket purchasers unaffected. Coming to the methods of raising the necessary money from the passenger train service—the question of freight rates is left over for a separate report—the Committee finds the 100 per cent. increase on pre-war fares, advised by the railway representatives too high, and recommends 16⅔ per cent. on present fares, which brings the level up to 75 per cent. above pre-war fares. This amount of increase they find reasonable when consideration is paid to the advance that has taken place in all the necessaries of life, while in rejecting the 100 per cent. advance they were influenced by possibilities of motor and tram competition, and abandonment of travel by intending passengers. "We have in the case of passenger fares been guided mainly by what the traffic will bear." No definite estimate is attempted of the sum that this increase will bring in, the Committee reserving consideration of this question until the revenue from the rates charged for carriage of goods is dealt with. The resumption of excursion fares is not recommended at present, but these, the Committee thinks, should be resumed as early as possible, but at higher proportional rates to ordinary fares than before the war.

The Report then turns to the question of workmen's fares, and produces strong evidence in justification of a substantial increase. Such fares, generally speaking, stand at the same level as before the war, and the following table shows how extraordinarily cheaply workmen and others who are able to make use of early train services have hitherto been able to travel.

	Distance—Miles.	Pre-War 3rd Single Fare.		Present 3rd Single Fare.		Daily Rate of 3rd Class Season Ticket.		Workmen's Fare for Return Journey.	
		s	d	s	d	s	d	s	d
Glasgow to Paisley	7·24	0	6	0	9	0	4·34	0	2
Enfield to Liverpool Street	10¾	0	8½	1	0½	0	9·94	0	2
Lower Edmonton to Liverpool Street	8¾	0	6	0	9	0	8·46	0	2
Wood Street to Liverpool Street	7	0	5	0	7½	0	6·76	0	2
Acton to Paddington	4·21	0	4	0	6	0	4·02	0	2
New Cross to Charing Cross	5·51	0	4½	0	6½	0	5·50	0	3
Woodside Park to King's Cross	8·53	0	7½	0	11	0	6·89	0	4
Slough to Paddington	18·36	1	6	2	3	1	0	0	8
Uxbridge to Paddington	15·60	1	1	1	7½	0	9·97	0	7

Having disposed of the plea that the railways cannot raise workmen's fares without breaking a bargain with the State, the Committee recommends the following scale of charges:—For any distance not exceeding 2 miles, 3d for the double journey; between 2 and 2⅛ miles, 3½d; between 2⅛ and 2⅔ miles, 4d; between 2⅔ and 3 miles, 4½d; between 3 and 3⅓ miles, 5d; between 3⅓ and 3⅔ miles, 5½d; between 3⅔ and 4 miles, 6d; for distances over 4 miles, 6d for the first 4 miles, and ½d for every additional half-mile. A proviso is added that no increase shall exceed 200 per cent. of the existing fares. "Gradually," says the Report, rather cryptically, "these fares should be brought to such a level as shall be dictated by public policy." The idea of extending the hours with which these cheap trains are run is rejected on the score of traffic congestion.

Season ticket charges, according to the committee's recommendation, are to be increased 50 per cent. over the charges in force before May, 1918. In that month, it will be remembered, the price of seasons for distances under 12½ miles were raised by 10 per cent., and for longer distances by 20 per cent. The conditions of traders' tickets are to be less generous to holders. It is recommended that in future no greater reduction should be made on traders' tickets as compared with ordinary season tickets than 20 per cent., and also that the amount of traffic necessary to qualify for such a ticket should be increased to £1,000, as against the present qualification of £300.

The Irish railways are treated as a separate unit. A deficit of £2,200,000 is to be met, and it is recommended that ordinary passenger fares should be raised by 33⅓ per cent. over existing rates, and season tickets by 75 per cent. For the time being all these fractional increases will over-exercise booking clerks, and their customers, in mental arithmetic, and it is to be hoped that the companies will speedily act upon the advice of the Committee that the new fares should be printed on the tickets as soon as possible.

GERMANY'S POWER TO PAY.

THE conference of experts which will shortly meet at Geneva to study the question of reparation by Germany and refer its conclusions to the Allied Governments will presumably have to consider the remarkable memorandum now before us on the economic capacity of Germany sent us by our Berlin correspondent, and signed by 22 German experts in economics and finance. It is a very ably drawn plea for the mitigation of damages, and for alteration in the forms and methods of payment. Its main contention amounts to this: The more the Entente demands from Germany, especially in kind, the greater will be the fall in the value of the German mark, and the greater the German difficulty in buying raw material and selling the finished product abroad. From the beginning of the armistice, according to the contention of the signatories, the economic and political difficulties of Germany have been aggravated by the Entente Powers. They hampered transport by the demand for rolling stock; they extended the blockade to the Baltic; they hindered the food supply by unexpected demands; the cessions of territory have reduced the population by 7½ per cent., and, including the plebiscite districts, may reduce it by 23 per cent., and the home supply of food and raw materials by 25 per cent. in cereals and potatoes and 12 per cent. in cattle, so that the adverse trade balance would be increased, with a further depreciation in exchange. (This contention, however, is already weakened by the result of the Allenstein vote.) The potash of Alsace, now lost, would have been rapidly developed; nearly 80 per cent. of Germany's iron ore is gone, and, if Upper Silesia is lost, more than half her coal. Labour will be further depleted by emigration, and the cession of mercantile shipping has left the sailors unemployed, and, therefore, dangerous. Inland water transport has been gravely lessened, and the cession of fishing vessels has seriously reduced an already curtailed food supply. The occupation of the Rhine territory has broken up its complicated trade connections with the rest of Germany, depriving it of its markets, and hampering the finishing of its manufactured goods, and, with other frontier changes, has led to large illicit importation, mainly of luxuries, which encourages waste and reduces Customs, a mainstay of the diminished revenue. The loss of the colo-

nies, besides intensifying "moral depression," has deprived Germany of a possible outlet for her surplus population (!), and an export of fats and oils; that of shipping has cut off freight earnings; both of these would help to redress the balance of trade. The liquidation of German undertakings abroad, apart from the losses involved, has had a similar effect, and the foreign securities held have been largely got rid of to pay for food. Germany must compensate her nationals for their losses in liquidation under the Peace Treaty, but her debt has risen to 197 milliards of marks (consolidated 92, floating 105 milliards); her taxation is about seven and a-half times that of 1913, her capital is taxed so heavily that her productive capacity is further lessened, and she can only pay the compensation in question by issuing more paper marks. The amount of coal required under the Treaty cannot possibly be delivered, and what is delivered, with all contributions in kind, must be paid for at the world's prices in cash, the proceeds to go towards reparation. Germany is prepared to help in the reconstruction of France by supplying labour and material, and requires Entente credits or an emergency loan for the annual purchase of nearly 5 million tons of food and phosphates, for which negotiations should be opened at once. The document closes with "premises to a new offer." Reciprocal most-favoured nation treatment between Germany and her former enemies; no "reprisals" in the event of German voluntary default; the maintenance inviolate of Germany's "economic supremacy" at home, now threatened by the rights of way established through her territory for alien traffic, by the irregularities of frontier imposed by the Treaty, and by the Allied occupation; Upper Silesia to remain German; the cost of the occupation to be fixed; the restitution of Allied property looted to be replaced by pecuniary compensation; Entente aid in Germany's settlement with her former Allies—for here the obligations are reciprocal; retention by Germany of fishing vessels, and of "the tonnage necessary for her existence"; debts to be settled directly instead of through the Clearing House—such are Germany's demands. Some are reasonable, others at least arguable; others, again, such as the protest against rights of way and the demand for shipping, display Germany's inveterate delusion that all the world is against her. Then, is there to be no penalty for wilful German default? and is the Entente expected to aid or compel the Porte or Bulgaria to pay to Germany the sums she forced on them wherewith to fight the Entente? One might as well expect the United States to redeem the Confederate Loan.

Apart from these "premises," however, the memorandum is worth careful study as the strongest possible presentation of the German case. It is backed up by two official documents: one, "Germany's Solvency for the Purpose of Reparation," going over much the same ground; the other, on the "Charge of Taxation in Germany," which gives full details, and states the ordinary requirements of the "Reich" for 1920 as 23.8 milliard marks. But is no retrenchment possible here? Three milliards are devoted to additional official salaries and wages, in view of the cost of living. Are all these officials necessary for a shrunken and impoverished nation? And why should the Army and Navy cost 1.87 milliard, even in depreciated marks, when they cost less than a milliard before the war?

THE CLERICAL, MEDICAL, AND GENERAL LIFE.

Income-tax, depreciation of securities, and advancing expenses are rough stones in the path of any purely life office at the present time. The composite insurance offices with life branches can transfer part of the burden of working expenses and of depreciation to the shoulders of the powerful fire and marine or accident departments, or—what comes to the same thing—can make grants in aid of the life branches out of profit and loss balances. Especially is the way hard of the proprietary life offices, for their shareholders may consider themselves lucky if in these days it be found possible to maintain their dividends. There is no prospect of increase. We are not therefore surprised to learn that the directors of the Clerical, Medical, and General Life Assurance Society—a proprietary life office of the highest standing—recommend their shareholders to accept an offer from the Employers' Liability Assurance Corporation to purchase their shares. This is a sale of shares, not an amalgamation. The Clerical, Medical, and General remains in existence and carries on business on its own accepted lines, but its shares will be owned by the Employers' Liability Corporation, and its policyholders will get the benefit of the saving in expenses in branch establishments and so on which a composite office can always secure. For the shareholders of the Clerical, Medical, and General the terms are good. They are offered seven Employers' Liability shares for each one of their own shares, which means a secure (and probably increasing) dividend of 28s a share against a much less secure (and possibly decreasing) dividend of 19s a share. A provisional valuation of the Clerical, Medical, and General for the four years to June 30th last shows that in spite of depreciation the rate of bonus to policyholders will probably be maintained. This prospect of maintainence will be made better by the sale of shares, for under the terms of the agreement between the two companies the Employers' Liability pay the equivalent of £45,000 to the Clerical and Medical's life fund. There will also be—or should be—the saving in expenses in branch offices to which we have referred above. From the points of view, therefore, of both shareholders and policyholders of the Clerical, Medical and General there can be no doubt that the sale of shares will be beneficial. But what about the Employers' Liability Corporation? We have no guide except experience, but that is emphatic. The future of insurance business is in the hands of the big composite companies, whose branches can feed one another. The independent days of the proprietary specialist insurance offices are numbered. Mutual life offices will continue, we believe, but not proprietary life offices, unless they are able to develop themselves into composite companies—a very expensive and uncertain enterprise. The Employers' Liability Corporation recently bought the shares of the Merchants' Marine, and by its offer now to purchase the Clerical and Medical's shares has turned itself into a composite office. The marine and life sides of the business are now secure; there remains only fire insurance to be developed. Though the profits of the Clerical, Medical, and General will not contribute much to the dividends of the Employers' Liability, the connections of this admirable society will be of great value to the other branches of the business. We have little doubt that the transaction will ultimately prove as satisfactory to the purchasers as it clearly must be to the sellers, but the fruits of the purchase will take some years in ripening. In the meantime the directors of the Employers' Liability Corporation—which is at present an accident, marine, and fire office, and is about to become a life office—will be compelled to think seriously of adopting a more comprehensive name.

THE VOLUME AND VALUE OF OVERSEAS TRADE.

The movement of prices has such an important effect upon trade statistics at the present time as to render comparisons with pre-war figures of little account unless some cognisance is taken of the alteration in values. For many years past it has been our practice to calculate once a year to what extent the movements in the figures of overseas trade are due to changes in volume, and to what extent to alterations in prices. We are glad to see from the current number of the *Board of Trade Journal* that the Statistical Department of the Board of Trade has made similar calculations for overseas trade for each of the past two quarters, prices in the first half of 1913 being taken for comparison. The figures show a distinct improvement in the volume of our manufactured exports, as well as a rise in their average value in the second quarter compared with the first quarter, but it still failed to reach the level of 1913. Our import trade, on the other hand, falls comparatively little short of its pre-war volume. The following table compares the recalculated figures for the second quarter of this year with those actually published in the trade returns:—

April-June.	Value as Declared 1913.	Value of 1920 Trade at Average Values of 1913.	Value as Declared 1920.	Decrease in Volume.
	£1,000.	£1,000.	£1,000.	%
Total imports.....	182,467	176,237	502,763	— 3·4
Re-exports	27,967	26,542	60,791	— 5·0
Exports of U.K. produce	129,751	95,399	341,924	— 29·5

The increases in declared money values, as compared with 1913, were 175 per cent. for imports, 117 per cent. for re-exports and 163 per cent. for British exports.

A comparison of the variations of imports and exports of the principal classes of commodities reveals a number of interesting points. The table below shows the effect of prices upon retained imports (*i.e.*, imports less re-exports) in the second quarter, the figures of the first quarter being given in brackets for comparison :

Imports, less Re-exports. April to June. (January to March in brackets.)	Value as Declared 1913.	Value of 1920 Trade at Average Values of 1913.	Value as Declared 1920.
	£1,000.	£1,000.	£1,000.
Class I.—Food, drink, and tobacco	68,451 (62,333)	61,786 (66,031)	177,947 (180,939)
Class II.— Raw materials and articles mainly unmanufactured	42,238 (59,937)	46,928 (53,180)	154,260 (184,178)
Class III.—Articles wholly or mainly manufactured	43,192 (42,230)	40,750 (33,146)	109,094 (89,589)
All articles, including miscellaneous.....	154,500 (165,195)	149,695 (152,620)	441,972 (455,472)

Taking the six months as a whole, the figures for both Class I. and Class II. show only a slight decrease on the 1913 standard, while for Class III. a decrease of 13·5 per cent. in volume of trade is shown. While the necessary uncertainties of the figures may give little significance to the small decreases in the first two classes, the decrease in imports of goods classed as wholly or mainly manufactured is significant. All the groups of non-dutiable foodstuffs show decreases in the quantities of commodities retained, feeding stuffs for animals by 40 per cent., meat by nearly 8 per cent., grain and flour by 18 per cent., and other non-dutiable foodstuffs by about 20 per cent. On the other hand, the imported tobacco retained shows an increase by about 74 per cent., and the dutiable foods and drinks about 54 per cent. Bonded stocks of dutiable goods show, in most cases, substantial increases during the half-year, and also as compared with the middle of 1913. Among raw materials there is great diversity in the relative quantities of imports retained, comparing the first half-years of 1920 and 1913. Hides and skins have increased largely, cotton and paper-making materials also showing increases in excess of 25 per cent. In the case of cotton the increase is due to the deferment till after the end of 1919 of a larger share of the season's imports than is usual, rather than to an exceptionally large volume of imports in the season as a whole. Decreases amounting to nearly one-third of the imported supplies of 1913 are shown in the cases of ores of non-ferrous metals, rubber and timber, and supplies of wool imported during the half-year have decreased by over 25 per cent. on the 1913 record, after deducting re-exports in each case

British exports show the following changes :—

Exports of U.K. Produce. April to June. (January to March in brackets.)	Value as Declared 1913.	Value of 1920 Trade at Average Values of 1913.	Value as Declared 1920.
	£1,000.	£1,000.	£1,000.
Class I.—Food, drink, and tobacco	7,255 (6,884)	3,863 (5,097)	12,291 (13,030)
Class II. — Raw materials and articles mainly unmanufactured	16,805 (15,544)	7,933 (10,124)	36,853 (44,961)
Class III. — Articles wholly or mainly manufactured	103,329 (102,514)	82,341 (74,189)	288,498 (233,206)
All articles, including miscellaneous	129,751 (127,310)	95,399 (90,761)	341,924 (295,543)

Taking the six months as a whole, the decrease in coal exports is more than sufficient to account for the whole of the decrease in Class II. The chief interest of the comparison lies in Class III., covering exports of the products of our manufacturing industry. A few groups show an even greater volume of exports than in 1913. Rubber manufactures and non-ferrous metals and manufactures of those metals are the more important among these expanding groups. The decreases which have affected the total to the greatest extent are found in cotton goods, iron and steel goods and machinery. The decrease in the volume of exports in Class III. amounts to 24 per cent. compared with the first half of 1913, and the average increase of values per unit of quantity is shown as 233 per cent. It is to be noted that, for imported raw materials retained, the half-year's figures show average values 238 per cent. higher than in 1913, or corresponding closely with the increase in values of manufactured goods exported. Our contemporary points out that, "in view of the nature of the material available for the calculations, no great stress can be laid on the difference between these two figures. As, moreover, the difference was much greater in the first quarter of the year, it would appear that prices of manufactures have, during the second quarter of the year, shown a greater advance on the 1913 level than have the raw materials obtained from abroad in that quarter. It does not follow, of course, that the advance in the prices of the manufactured goods shipped abroad in the second quarter was even approximately as great as that of the imported materials used in their production, since the export of manufactures takes place considerably later than the acquisition of the raw materials worked up in their production."

Business Notes.

More Supplementary Estimates.— A further supplementary estimate for the Civil Services (White Paper No. 152, price 1d) is issued this week, asking for £2,404,200 for various purposes. This, together with the £18,000,000 odd asked for last week, takes us beyond the limits of the £20 millions allowed for in the Budget, and the financial year is yet young. An extra £200,000 is required for the Secret Service. Other additional grants required include £37,000 for passport control, £740,000 for advances to Persia, £400,000 for maintenance of Russian refugees, £50,000 for relief in Russia, £770,000 for the purchase of the Siberian Bank, £209,000 for the pay of Czecho-Slovak troops during repatriation from Siberia. Some of these expenditures seem to require further explanation. At the same time, a Government Bill has been printed, the purpose of which is to authorise the spending of £10 millions on the telephone service. When this Bill comes up for discussion we hope the House of Commons will insist on seeing definite evidence that we are likely to get our money's worth in the shape of an improvement of the present unsatisfactory service.

Disposal of War Stores.—Lord Inverforth has produced a White Paper [Cmd. 850, price 2d] setting forth receipts to March 31, 1920, in respect of surplus property held by Government Departments and disposed of, together with a statement of approximate sales from April 1 to June 30, 1920. The following financial summary is given :—

	£
Sales of surplus stores—	
From the Armistice to March 31, 1920	210,000,000
„ April 1 to June 30, 1920	41,000,000
Total	261,000,000
Sales of raw materials on trading accounts—	
From the Armistice to March 31, 1920	227,000,000
„ April 1 to June 30, 1920	26,000,000
Total	253,000,000
Grand total	504,000,000

The sales of surplus stores to date represent approxi-

mately 83 per cent. of the total surpluses notified to the Ministry of Munitions as available for disposal to June 30, 1920. As regards future sales, Lord Inverforth expects that a further £200 millions will accrue to the Exchequer from sales of surplus stores proper, and £100 millions in respect of raw materials on trading accounts. The White Paper deals at considerable length with the methods of selling and the difficulties met with.

The World's Tonnage.—The new edition of *Lloyd's Register of Shipping* contains the usual complete figures of the seagoing vessels of the world, and gives some useful comparative tables, the most interesting of which is perhaps that showing the present position of the merchant steam tonnage of the world as compared with 1914 :—

	Tons.
Decrease in the United Kingdom	781,000
Loss to Germany	4,716,000
Total	5,497,000
Increase in the United States.....	10,379,000
Increase in other Countries	3,619,000
Total	13,998.000
Net World s increase.....	8,501,000

In June, 1920, the world's total steam tonnage was 53,905,000 tons, an increase of 8,501,000 tons as compared with June, 1914. Among the increases not shown above are France (+1,041,000 tons), Japan (+1,288,000 tons), Italy (+688,000 tons), and British Dominions (+400,000 tons). Greece shows a reduction of 324,000 tons. In the case of the United Kingdom the figures include a considerable amount of ex-enemy tonnage provisionally allocated under the terms of the Peace Treaty. In 1914 the United Kingdom owned 41.6 per cent. of the world's tonnage, but the percentage has now dropped to 33.6. Norway, which before the war occupied fourth place, is now seventh, Japan, which was sixth, is now third, while Germany, who in 1914 occupied the second position with over five million tons, has now only 419,000. Excluding vessels trading on the great lakes of North America (about 2,300,000 tons), the United Kingdom percentage of the world's seagoing steam tonnage has decreased from 43.9 in 1914 to 35.1 in 1920, while the proportion of the United States, which was 4.7 per cent. six years ago, now reaches 24 per cent. With the exception of the United States, most of the increase recorded by the various countries, as compared with 1914, has taken place during the last 12 months, during which period over 6 million tons of shipping have been added to the world's merchant navies. Taken together, the Scandinavian countries—Norway, Sweden, and Denmark—still show a decrease, as compared with 1914, of 47,000 tons. The reduction in sailing tonnage since June, 1914, amounts to 641,000 tons, a smaller decrease than was shown in previous periods of six years, showing that tonnage scarcity has given a new lease of life to the construction of sailing vessels. The United States is the only country which has increased the sailing tonnage since 1914, over 43 per cent. of the world's total being now owned in that country. The percentage of sailing vessels to the world's tonnage is now under 6 per cent., as compared with just over 8 per cent. in 1914, and nearly 22 per cent. in 1902.

Demands of Lancashire Cotton Operatives.—The annual conference of the cotton operatives of Lancashire was held at Blackpool at the beginning of this week, when trade union representatives were present to the number of about 250. Numerous questions were dealt with, but in trade circles most interest has been taken in the discussions on hours of labour and the proposed inquiry by a Royal Commission into the position of, and conditions prevailing, in the Lancashire cotton industry. With regard to working hours in the factories, it may be said that 12 months ago the operatives in all sections of the trade secured a reduction from 55½ to 48 hours per week, and the agreement provided for no further change for 18 months. Ultimately the Conference decided to leave the matter in the hands of the Executive Committee, and it remains to be seen whether a definite application will be made for a further reduction in hours from the beginning of 1921. The discussion on the resolution dealing with the proposed appointment of a Royal Commission to inquire into the conditions under which the cotton industry is carried on covered a rather wide field, but the motion was carried unanimously. Amongst the cotton operatives of Lancashire the extremists are in a big minority, and it is of interest to note that Mr Henry Boothman, the general secretary of the Cotton Spinners' Amalgamation, explained that the resolution had its origin not in the desire for higher wages or shorter hours, but in the general feeling of indignation, that it should have been possible for a group of financiers and company promoters to take advantage of the position of the cotton industry after the war, and be enabled to make large fortunes. Mr Joseph Cross, the general secretary of the Textile Workers' Association, said that a knowledge of the true position would tend to prevent strikes and discontent among the workers. He further pointed out that many strikes had taken place because the workers believed the industry could afford to pay them more, or because they did not believe that it was necessary to reduce wages. If they knew the truth they could base their demands on the safety of the trade. In trade circles this decision on the part of the operatives has not caused any alarm, and it remains to be seen in what way the Government will be approached on the matter.

HARRISONS & CROSFIELD, LIMITED.

ISSUED CAPITAL .... £1,837,966.

1-4, Great Tower Street, London, E.C.3.

With

Branches in Ceylon, F.M.S., India, Dutch East Indies, Canada, Japan and elsewhere.

Agents and Secretaries for Tea, Rubber and other Produce Estates and Companies.

General consignment and commission business undertaken in London and Abroad.

British Overseas Bank and Belgium.—It is announced by the British Overseas Bank, that with a view to assisting in the development of trade with Belgium, an arrangement has been concluded with the Banque de Bruxelles whereby they and their associated banks will act as representatives in Belgium of the British Overseas Bank, Limited. The British Overseas Bank, Limited, and their associated banks on their part will represent the Banque de Bruxelles in this country. The issued share capital of the British Overseas Bank is £2,000,000 divided equally between "A" and "B" ordinary shares of £5 each. The latter is held by the following banks :—Anglo-South American Bank, Dominion Bank (Canada), Glyn, Mills, Currie and Co., Charles Hoare and Co., Imperial Ottoman Bank, Northern Banking Company, Union Bank of Scotland, Williams Deacon's Bank. The Banque de Bruxelles was established in 1871, and has a paid-up capital of 49,660,400f. On December 31, 1918, deposits amounted to 204¾ million francs.

Conditions in South Africa.—A cablegram received by the National Bank of South Africa, on the 29th, from its head office at Pretoria, states that the House of Assembly went into Committee on the Currency Bill, on the 23rd inst. The first chapter dealing with the issue of gold certificates was passed on 26th, after a series of divisions, and considerable progress was made with the second chapter, which deals with the establishment of the Central Reserve Bank. The Bill is being keenly contested, especially Clause VII., which provides for the suspension of the redemption of the Gold Certificates, while the market price of gold in the Union exceeds £3 17s 10½d for the standard ounce. The Minister of Finance had an amendment on the paper limiting the operation of this clause to three years, as against Mr Jagger's proposed limit of one year. Mr Merriman proposed to delete the whole clause, stating

that it made us liable to an irredeemable paper currency. Business up country is generally unimproved, and reports indicate a general holding off of buying. Country merchants are still holding large stocks of wool, which were bought at a high figure, and this factor is largely responsible for the dull business inland. In the Transvaal bar iron and steel trade business is good, with better demand from local engineer shops and foundries. The railways announce that the rate for bunker coal, which came into effect on July 12th, will be increased by 10s per ton. Coal for bunkering vessels, carrying full cargoes of export coal, existing net rate to be increased by 5s after deducting rebate. The existing rate for export to be increased by 10s after deducting rebate. The last applies to Mauritius, Madagascar, West Africa, Europe, Mediterranean, and South America. Union trade statistics for the five months ending May 31st, compared with same period 1919, shows value of imports of merchandise, including specie, £36,743,600, against £22,908,500. The proportion of British to foreign merchandise imported into British South Africa is as follows:—From United Kingdom, 53.2 per cent., and from other British Possessions 15.9 per cent; from foreign countries, 30.9 per cent. Exports (including coal, £499,150, against £533,900; diamonds, £6,593,500, against £4,673,450; corn, grain, and meal £371,550, against £1,566,000; raw gold, £14,794,700, against £27,407,900), came to £44,674,750, against £49,588,900. A postscript states that East London reports evident collapse in the wool market, seriously affecting business both in the town and the district; several failures already reported, and traders are asking for extended facilities; the outlook for the future disquieting. Wool business in that port is lifeless, owing to lack of general enquiry and the large stocks held. Buyers strongly disposed to refrain from purchases until growers and traders decide to accept lower prices, which is believed will be on the basis of almost equal to pre-war level.

General Mining Report. — The report of the General Mining and Finance Corporation for the year 1919 does not make very cheerful reading. The profit for the year amounted to £5,116, as compared with £25,434 for 1918. This sum is added to the balance of appropriation account, raising it to £79,788. Results in recent years are compared in the following table:—

	1913.	1914.	1917.	1918.	1919.
	£	£	£	£	£
Realisation profits.	7,305	12,968	16,406	11,323	17,798
Dividends, &c....	52,588	50,037	59,054	44,049	42,241
Brought forward..	5,953	*Dr. 43,417*	5,093	49,237	74,672
	65,846	19,588	80,553	104,609	134,711
Administration ..	20,114	14,911	15,816	18,132	20,008
Loss on ventures..	59,140	19,305	8,158	11,425	20,569
Interest, &c.....	..	31,002	7,342	380	14,346
Reserves, &c.	30,009	..	..	..	..
Carried forward ..	*Dr. 43,417*	*Dr. 45,630*	49,237	74,672	79,788

Investments in shares and debentures of other companies are taken in the balance-sheet at £1,795,418, and these, according to the report, show a depreciation in the aggregate of £1,066,100, if taken at market prices of December 31st last, as compared with a depreciation of £1,106,196 as the close of 1918. The companies in the group have had difficulty in contending with the rise in working expenses, which since the close of the year has become more pronounced, chiefly in the direction of white and native wages. In the case of three of the producing companies, "a complete revision of the policy of working, which involved retrenchment of a proportion of the white employees, had to be undertaken as the only alternative to a total suspension of operations, and in the case of the Roodepoort United, the introduction of the retrenchment scheme, can only delay the eventual closing down of the mine for a few months longer, even if the gold premium is maintained at its present level."

Licenses and Drunkenness.—The annual Blue Book on licensing statistics (Cmd. 817, price 2s net) is issued this week, and shows that the reduction of on-licences during 1918 was 600, or 29 less than the reduction achieved in the previous year. Off-licences were reduced by 185 in 1918, against 246 in 1917, while the reduction in 1919 is estimated to have been about 84. On January 1, 1919, there were in England and Wales 84,044 premises holding on-licenses, and 22,288 holding off-licenses, giving proportions, according to the estimated population, of 22.41 on-licenses and 5.94 off-licenses for 10,000 persons. Convictions for drunkenness in England and Wales fell from 46,410 in 1917 to 29,075 in 1918, but in 1919 they rose to 57,948, or roughly double the figure of the preceding year. These figures, however, compare favourably with the 188,877 convictions recorded in 1913. The Blue-Book sums up "some of the circumstances or causes which operated at different times, and in different degrees in different districts," to affect these figures, as follows:—"There were more men at home, and fewer of them in khaki, more policemen (and those less overworked) available for street duty, more hours for drinking, more (and stronger) liquor, more light in the streets, more money, more leisure, less self-control, less appreciation of the fact that drunkenness 'matters' now the war is over, less readiness to realise that the progress towards general sobriety, won during the war, ought to be carried on in Peace-time, and lack of equipment for driving that point home."

Canadian Letter: A Correction.—In a letter published in our issue of July 24th, from our Ottawa correspondent, it was stated (p. 148) that the price of potatoes had fallen to $3.50 per bushel. The correct quotation is "per bag," equivalent to 1½ bushels.

The British Italian Commercial Association, 12 Nicholas lane, E.C., announces that an International Agricultural Exhibition, including exhibits of machinery used in Agricultural industries, will be held at Rovigo in Italy from September 12th to October 31st. British manufacturers of machinery and appliances used in agriculture, and in all processes and industries connected with agriculture, stock-breeding, and fisheries may apply for information to the association.

Oversea Correspondence.

UNITED STATES.—THE SWISS LOAN—U.S. DEBT—THE ANGLO-FRENCH LOAN.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 15.

ON July 8th the Government of Switzerland issued through its fiscal agents in the United States $25,000,000 20-year 8 per cent. sinking fund gold bonds at par and interest. The bonds are payable principal and interest in United States gold coin, and are not callable for ten years. After July 1, 1930, they are callable in whole or in part at 105 and interest. An annual sinking fund of $1,000,000, payable in quarterly instalments, will be used for the purchase of bonds in the open market at or below 105, and if bonds cannot be bought in the market such payments will accumulate to the credit of the sinking fund. Perhaps the issue was brought out at too low a price or the offering well timed, for the books were closed within 24 hours of the initial offering with a heavy over-subscription, upon which they immediately rose to a premium of 2¾ per cent. Swiss credit has always been regarded very favourably in the United States, and the two previous loans in this country have always maintained very stable quotations. Apart from the fact that the 8 per cent. yield established a new record, and brought about declines in other existing foreign bonds selling on a less generous yield, the balance of the effect of this new issue was healthful and generally accepted as a turn of sentiment in favour of European securities.

Following the Swiss loan, the Armour Company brought out $50,000,000 10-year 7 per cent. convertible gold notes at 94.84, a 7¾ per cent. yield. The notes are a direct obligation of the Armour Company and secured by assets

of nearly $491,000,000, on which there is no lien of any sort, except an issue of $50,000,000 first closed mortgage bonds due in June, 1939. This issue met the same reception as the Swiss loan, and was almost immediately over-subscribed.

During the fortnight ending July 10th the regular quotas of British and French Treasury bills were issued on a 6 and a 6½ per cent. basis respectively, and a new issue of United States Treasury certificates was made at 5¾ per cent., comparing with 6 per cent. for the last previous issue. According to the preliminary figures the total debt of the United States on June 30, 1920, amounted to just over $24,225,000,000, of which about $16,225,000,000 is in bonds, $4,225,000,000 in Victory Liberty notes, and just under $3,000,000,000 in Treasury certificates. War Savings securities have dropped to about $828,000,000.

In answer to the exorbitant rate paid by Belgium and Switzerland on their recent loans in this country, it has been pointed out that the cost to the borrower is not so ruinous as it appears on the face, since in both instances there was not only an exchange profit in the transaction, but the goods for which the money was to be used could be had only in this country, and at a much lower rate than if these countries had raised loans at home, converted their francs into dollars, and then spent their dollars in this country. No definite announcement has yet been made as to how the French portion of the Anglo-French loan will be met, although several irresponsible rumours have been current indicating that Great Britain might assume France's share of this joint obligation. The fiscal agents of the British Government in the United States have denied all these reports, although the rumours seem to be so persistent that it is generally believed that some negotiations are under way providing for a transfer of the liability. The general market since the first of July has been somewhat better in demand, although there have been no advances in current quotations of high-grade fixed interest bearing obligations. Stocks, on the other hand, have advanced materially, with particular reference to Royal Dutch Petroleum and Shell Transport and Trading, both of which have enjoyed good buying on account of the stock dividend and final cash dividend both companies have recently declared.

FRANCE.—IMPORT RESTRICTIONS RELAXED—COAL SUPPLY AND WATER POWER—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, July 27.

By the publication of a decree on Sunday rescinding, so far as the great majority of the categories concerned, the prohibitions of importation imposed on April 23rd on many classes of foreign manufactured goods, with a view to correcting the high rate of exchange against this country, the *régime* of French imports has very nearly returned to the normal. The number of categories of goods of which importation is still prohibited has been reduced to about a score, and includes pearls and precious stones, figs, raisins, grapes, cut flowers, wines, embroidery, watches and clocks, and component parts of these goods, firearms, cartridges and projectiles. Even in the case of most of these categories, moreover, it is possible to secure a special permit authorising their importation into France. At the same time higher Customs duties have been imposed on some 50 of the categories of goods whose import has hitherto been prohibited, these being chiefly *articles de luxe*.

The action of the Government in imposing the restrictions that have now been removed was the occasion of much controversy here on the part of economists and others, and in many quarters the step was severely condemned as likely to prove, in the long run, a serious detriment to the interests of France herself. Among others, M. Charles Gide, professor at the Paris Faculty of Law, has expressed himself strongly against such prohibitions. M. Gide insists that, as a rule, any restrictions placed on international economic changes are deplorable, and have generally their basis in pure protectionism. Imports, he asserts, unless they be notoriously excessive, have only a very slight influence on the rate of exchange, and to hamper imports merely results, in most instances, in increasing export difficulties. "The misunderstandings that arise between nations," he insists, "are nearly always due to false steps of an economic order. Prohibitions and exclusions adopted by one country bring about corresponding measures in another, and the result is to render impossible all cordial relations between nations. .....All statesmen hope for the advent of the League of Nations, but very few of them seem to realise that it will be impossible if a narrow protectionism insists on maintaining watertight compartments in commercial relations and keeping up perpetual subjects of conflict arising out of the selfish interests of the various States."

Despite the Spa settlement, the coal situation continues very greatly to exercise public opinion here, for unless an adequate supply is ensured France is doomed to the gravest difficulties, not merely from the domestic, but also from the economic standpoint. It is only necessary to visit the belt of devastation to realise how vitally the reconstruction of France is dependent on its supply of energy in the form of coal. French manufacturers are emphasising more emphatically than before that it will be impossible for the French export trade to be re-established unless an adequate coal supply is assured. The following figures, that have been published officially, indicate the gravity of the situation, the essential fact being that whereas France used 54½ million tons of coal in 1913, she was reduced in 1919 to a consumption of 37¼ millions. The actual figures are as follows :—

(In 1,000's of Tons.)

	Origin.		
	French Mines.	Foreign Mines.	Total.
1913	35,790	18,711	54,501
1915	16,934	18,777	35,712
1916	18,185	18,735	36,920
1917	24,818	15,110	39,908
1918	22,100	15,933	38,033
1919	15,938	21,336	37,274

The first five months of the present year show a slight improvement on 1919. Whereas before the war the monthly average consumption was 4,542,000 tons, and in 1919 3,106,000 tons, the figures for 1920 have varied from 3,410,718 tons to 2,895,096 tons. The situation as regards coke is even more serious, for whereas before the war the monthly mean consumption was 583,300 tons, during the present year this has dropped to 350,000 tons. This fact is sufficient to explain why the French furnaces are working either at very low pressure, or have closed down. M. Millerand, in his declaration to the Chamber after his return from Spa, showed that next winter, even if the Germans carry out their undertaking to furnish this country with 1,600,000 tons of coal per month, France will still be able to command only 80 per cent. (or 4,200,000 tons) of her normal requirement of coal. This 4,200,000 tons would be derived from the following sources :—

	Tons.
Germany	1,600,000
French mines	1,500,000
Great Britain	750,000
America	300,000
Belgium	100,000

Meanwhile, the development of the French waterfalls as a source of electric power, to make up for the scarcity of coal, is being prosecuted with the utmost energy. Recent estimates show that France possesses a greater amount of available water power than any other country in Europe, and there is now no doubt that under the pressure of present circumstances full advantage will be taken of the fact. Great power development schemes are now taking practical shape in every direction. I referred to one of these—that based on the swiftly running current of the River Rhone—a little time ago, and now several others are coming to the front. By the end of 1917 France had increased the motive power derived from her rivers by 50 per cent., as compared with the period immediately preceding the war. The Bill recently passed authorising the Paris-Orleans Railway to develop electric power for traction purposes by utilising the waterfalls in the Dordogne area, sanctions works that, in addition to enabling the company to produce the 100,000 h.p. it needs for its own purposes, will leave a surplus of 380,000 h.p. available for industrial needs. The cost of the pending electrification of the Paris-Orleans railway system is officially estimated at

760,000,000f, that of the P.L.M. at 1,190,000,000f, and that of the Midi system at 740,000,000f, or a total of 2,700,000,000f. The electrification of these three railway systems—or, rather, of such portions of them as are to be dealt with—will result, it is estimated, in a saving of about 1,700,000 tons of coal per annum, on the basis of the 1913 volume of traffic alone, and, of course, considerably more in view of the steadily growing mileage run. The saving in expenditure is estimated at about 180,000,000f a year for the three systems. The plans now under consideration provide for the electrification of a total of 8,259 kilometres of railway, of which 3,101 kilometres are on the Paris-Orleans system (representing 40 per cent. of its total length), 2,193 kilometres on the P.L.M. (or 23 per cent. of its length), and 2,965 (or 76 per cent. of the whole system) on the Midi.

There has been some fluctuation on the Bourse during the current week, considerable uneasiness having been felt somewhere about Wednesday last, as a result of Polish situation. Capital was made of this by dealers, who desired to unload, but towards the end of the week there was a tendency in the opposite direction, owing largely to the calm with which the Polish situation was regarded in England and also to the increased firmness of the British pound. French Funds have remained without any appreciable change. Banks have rather dropped from the position they held a week ago, but the decline has been trifling. Crédit Lyonnais, for instance, is at 1,660, as against 1,675, and Union Parisienne at 1,272, as against 1,290. Railways have shown only the slightest variations, but that the tendency has been towards a rise. Nord Sud, for instance, have passed from 154 to 168, Electrical undertakings have shown slight decline, that has not, however, been followed throughout the entire group, because while Thomson Houston is back at 1,140, Radio-Electricité and certain other similar securities have advanced from 315 to 332. Metallurgical descriptions have generally been dull, with a slight tendency to decline. In Mining securities Boleo is worth quoting at 920, as against 955, and Tintos at 1,850, as against 1,900.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows :—

GERMANY.—POLISH WAR—COAL AND FINANCE—EXCHANGE AND BOURSE—EXPORT DUTIES—COST OF LIVING.

(FROM OUR CORRESPONDENT.)

BERLIN, July 22.

THE Polish war, which to-day sees Bolshevik cavalry within two marches of the frontier of East Prussia, has thrown into the background the other matters debated at Spa. The Government this week issued a proclamation of neutrality, and the Foreign Minister followed this up with a declaration that if Entente forces invade German territory on their way to a possible campaign against Russia "no German must accept such a plan silently or help towards its execution." Presumably this means that Germany would not attempt to protect her neutrality forcibly. Dr Simons declared that he was not afraid of Bolshevik cavalry or propaganda, but extreme nervousness prevails in East Prussia, where certain instable elements talk of forming red armies of their own. As East Prussia, as long as it is really neutral territory, provides excellent protection for the Reds' right wing, authorities on military matters here do not believe that a raid in that direction is part of the Soviet plan, but it is held that if Koenigsberg were known to be an intended landing-place for an anti-Soviet expedition, a Bolshevik irruption, with aim of destroying railways and bridges, would be likely. Outside East Prussia no German is much frightened at the prospect. The strong anti-Polish feeling in all classes has almost transformed the Bolsheviks—as long as they stop short at Warsaw—into German heroes.

The Government has presented the Reichsrat with a Bill prolonging the Coal Tax law, which expires on July 31st, for another year. The tax is now the biggest and most reliable item in the Federal finances. It came into force on August 1, 1917, yielding 600,000,000m in the first year. In the current financial year its yield is estimated at 4½ milliards. It is based on an average coal price of 170 marks a ton. The large yield is mainly due to the steady rise in coal prices. The price of the best Ruhr coal, which up to April, 1915, was 13.75m a ton, was 19m when the tax was first levied, 30.15m at close of 1918, 95.20m at close of 1919, and since May 1st has been 238m. A possible further rise is now engaging the coal interests and the manufacturing industries. At beginning of June the Coal Syndicate demanded a rise in view of the increase of wages by 7.50m per shift; but the Government, hoping for a general price-fall, resisted, and settled the matter by burdening the mine-owners with 3 marks, and paying the other 4.50 itself. This is another instance of the practice of meeting all difficulties by State subsidies, which means—by discounting bills and printing Reichsbank notes. The Spa decisions, if carried out, will probably mean a considerable increase in the coal tax yield, but if the subsidy system is continued it will place a further burden on the finances.

The Bourse during the past week was firm, but with the foreign exchanges keeping around their level of the past month there was no all-round big rise in quotations. The relative stability of the mark exchange since the apex of its upward movement late in May was put down to hesitation by the speculative elements while Spa was pending; that it has continued since Spa is perhaps explained by the fact that the same speculative elements are waiting for a lead from the Geneva Conference. To-day's Bourse saw some realisation sales, with passing weakness, but a recovery followed. Early in the week there was a big demand for potash stocks, for chemical stocks, which went up sharply on the 19th, for Siemens and Halske (on basis of American purchases, which seem to have come to an end), and for coal papers, this demand being based partly on the belief that the Spa settlement would force production and partly on expectation of a price-rise. The average price of stocks is now well above the low point touched after the mark exchange recovery, the sum quotations of 15 dividend-bearing banking, shipping, industrial and colonial stocks having been 7,606 on July 10th, as against 7,372 on the 3rd.

The industrial stagnation, which already led the Ministry of Industry to consider municipal organisation

of sale of leather goods, has now led the Ministry to discuss measures for helping the textiles industries. Reports of curtailing of work or discharge of employees by cotton, wool and silk manufacturers are increasing. The condition of textile firms in Saxony is critical. Vast stocks are on hand, and practically the whole population is short of clothing and household textiles, but nobody will buy, this though the heavy reduction of prices expected by the public will not be possible until the old stocks are worked off. The Government proposes to organise sale of clothing through the communes, co-operatives, and associations of consumers. The inability of Germany to export at present prices and exchange has led to a further cutting down of the export duties imposed last May. The export duties on all kinds of paper and cardboard, wallpaper, account books, pens and fine cutlery have been reduced, and are mostly now fixed at 3 per cent. *ad valorem*. The cutlery interests of Solingen have supported earlier petitions by other interests, asking the Government to abolish the duties altogether.

The cost of living (as calculated for Berlin only) has now been going back for two months, being in June 15 per cent. higher than in February, as against 44 per cent. in May. The following tables give figures (in m) of two official authorities :—

	Feb.	March.	April.	May.	June.
Weekly cost of food-ration for 2 adults and 1 child	117.13	128.50	138.37	137.11	135.15
Weekly existence minimum for 2 adults and 2 children	256	321	366	370	295

The great difference between rate of fall in these tables is a sore point for advocates of State regulation. The rationed foods in the first table have kept almost at their maximum price of April, as result of incautious over-buying by State and municipalities when prices were rising, in the belief that no fall was in sight, whereas the second table, being largely composed of non-rationed foods and other freely sold products, shows a sharp fall.

SWITZERLAND.—THE TRADE BALANCE.

(FROM OUR CORRESPONDENT.)

GENEVA, July 26.

IN the first quarter of 1920 Switzerland exported 866.4 million francs worth of goods, and imported 1,050.2 million francs in value. Imports thus exceed exports in value by 184.2 million francs. The Swiss commercial balance is thus in the first normal year after the war and blockade by far more adverse than in 1913, when the quarterly excess of imports over exports came to 146 millions in the average. But in 1913 Switzerland drew from the foreign investments of her citizens at least, after deduction of new investments, an annual income of interests and dividends estimated at 300 million francs. Furthermore, before the war the net income of the country from tourists' traffic and hotel business amounted to at least 180 million francs, and the Swiss railway as transporters of goods from North to South, from West to East of the continent made also a considerable income out of invisible export. Now in 1920 the foreign investments yield only depreciated incomes, two-thirds are in the former central Powers, bringing only in the average one-tenth of their income in Swiss francs. The net income from tourists, even after abolishing vexatious frontier measures, will be very small, so long as the Swiss franc is too expensive for the tourists of each of the four neighbouring countries, who sent before the war 80 per cent. of the guests of Swiss hotels. In the traffic between Italy and the North of Europe the transit over Swiss railways is now avoided as much as possible, since the former Austrian Brenner-Line, in spite of technical disadvantages owing to the tariffs in Austrian Crowns and Italian lire, is by far cheaper, especially for the German exporter and importer. Also the traffic between France and the former Austrian countries, very important for the moment, goes around Switzerland, and prefers the cheaper Bavarian lines.

DENMARK.—IMPROVING TRADE BALANCE—UNSATISFACTORY EXCHANGES—ORIENT STEAMER COMPANY.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, July 24.

THE trade balance of Denmark is improving, although it is still on the wrong side. The improvement as compared with the previous months of the present year is very marked. For May, the last available figures, imports amounted to 181,000,000 kr, and exports to 164,000,000 kr, whilst the deficit in none of the previous months of the present year has been under 100,000,000 kr, and for February it exceeded 150,000,000 kr.

The Kr, however, will not mend its ways, and its position, more especially as regards $, is very unsatisfactory, $ to-day being quoted at 624.00, £ is at 23.48 (and is in Stockholm down at 17.63), and marks have receded a little, now being quoted 14.35. The stock exchange keeps as dull as can be, and steamer companies, more especially, fared badly, the majority receding 10-15 per cent. The Orient steamer, notwithstanding an increase in the dividend just declared from 65 and 75 per cent. for the two preceding years to 80 per cent. for the year 1919-1920, dropped some 16 per cent. the last couple of days. Besides being able to declare a dividend of 80 per cent., the Orient company adds 4,000,000 kr to reserve and renewal fund, and puts 10,000,000 kr aside for taxes and contributions towards the country's imports.

Letters to the Editor.

THE BANK FIGURES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have been long hoping for someone having authority to express publicly, as you have now done, that the banks may be "stretching a point to finance the exploiters" of commodities. I have not doubted it for a long time. Their swollen loans and advances, and reduced cash in hand and money at call seem ample proof. But they have let themselves into heavy commitments supporting speculators and holders up of commodities, and financing rash enterprises, and it is not so easy to get out. Many of the flotations of this year, and the high rates offered in prospectuses for money, indicate frenzied financial expedients to shift the burden from the banks to the public. That is the case undoubtedly in businesses of which my knowledge is intimate. The easy facility with which such businesses have been obtaining money from their bankers has caused those owning them to plunge beyond their depth.

An awakening is not far distant. Having the advantage of being intimately (and officially) connected with several large manufacturing and dealing businesses in various lines, I can assert that at only rare intervals (such as the sudden call for E.P.T.) need there have been any very great shortage of money in most businesses adequately capitalised before the war. No doubt there are exceptions.

Although overturn has enormously increased, it has been neutralised by the ease with which manufacturers and dealers could insist on prompt and even *pre*payments. In the case of engineering work, for instance, prepayment of part cost has had to accompany the order. The world is suffering less from scarcity than from the slow movement of goods between producer and consumer.

The supplies of most commodities have for a long time been most ample in this country. Docks and wharves at all ports are bulging out with goods. But while banks continue to lend, the holders of goods naturally strive to maintain prices. They have the example of the greatest trader of all—the Government—to support them, for as their spokesman has recently said, they cannot allow a break in prices, and a loss of the taxpayers' money. But the taxpayers—the British public—pay all the same—by inflated prices.

There is no competition in the old sense left. The E. P. T. has compelled traders in every branch of in-

dustry to refrain from limiting their own and competitors' profits, and to combine either tacitly or by actual arrangement to put it on the public, in order that they may themselves secure reasonable profits after the Chancellor has drawn his unrighteous "swag."

At the back of the agitation to get quit of the most wicked, and in its incidence, the most unfair tax that was ever invented is the belief that the Government would stand by its engagement, and abolish the iniquity when the war ended, and the fact that many had thereby committed themselves to huge expansions, and are now deprived of money to carry them out. Till the E. P. T. is abolished and income-tax levied uniformly on lawyers, doctors, miners and mechanics, professional and salaried persons who have had incomes increased, as has been the case with merchants and manufacturers, healthy competition and a reduction in the prices of commodities cannot be expected.

A flat tax fairly levied only will bring relief.—I am, Sir, your obedient servant, M.

London, July 27th, 1920.

THE QUESTION OF CREDIT.

TO THE EDITOR OF THE ECONOMIST.

Sir,—Your correspondent, Mr Wallis, is quite in error in assuming that the arguments put forward by Mr Kitson and myself on the above subject are mutually destructive. Mr Kitson says, quite truly, that the sane method of reducing prices is to increase production. I quite agree. Before, however, you can increase production you must have the wherewithal to pay the increased wages that increased production necessitates. By restricting the issue of currency notes to 320 millions, the Government have restricted the source from which wages are obtainable, and consequently the increased production which is necessary for bringing about lower prices is retarded, if not altogether prevented.

I am in absolute accord with Mr Kitson. The Government, in urging, on the one hand, both capital and labour to increase production, whilst, on the other hand, withholding the credit necessary for such increased production, is acting in precisely the same way as did Pharoah of old, when he required the children of Israel to make bricks without straw, and it is certain as night follows day that if they persist in this action the same results will follow.—Yours faithfully, T. B. Johnston.

The Bristol Pottery, Fishponds, Bristol,

NATIONAL DEBT AND HIGH PRICES.

TO THE EDITOR OF THE ECONOMIST.

Sir,—In your issue of to-day, Mr Beaumont comes squarely to grips in reply to my letter in your issue of 10th inst.

First, he considers that the effect of the existing issue of Treasury notes in raising prices is "extremely small," whereas I contend that it is now making all prices about double what they would otherwise be, or than they would be if each gold sovereign withdrawn from circulation had been substituted by only one £1 note instead of, as at present, about £320 million in Treasury notes being substituted for about £120 million in sovereigns.

Secondly, as the price of labour is an item in the aggregate of prices, and as I contend that the existing issue of Treasury notes is doubling all prices, it is beside the question to tell me that "we could never have imported enough gold to meet our present wage bill." My contention is that neither importation of gold nor fresh issues of paper would be called for as the "wage bill" would be about half what it now is, and the wages would probably be worth more to the wage-earners than the high rates they are now receiving.

Thirdly, I am asked if I "really maintain that prices will not appreciably fall until gold takes the place of Bradburys?" In rough reply, I say that will be so under the financial views which now dominate our banking community, but I contend that it need not be so.

To pay off the Bradburys, so as to create a forced demand for gold, would make confusion worse confounded, but at this moment there is a stepping-stone clear by which equitably to withdraw our redundant paper money. That stepping-stone is the old joint standard of gold and silver which was disjointed by Robert Lowe's Currency Act of the year 1870. The present market prices of gold and silver make it easy to arrange for the Bank of England quickly to resume metallic payment of their notes, and an immediate return to that double standard would give an equitable currency basis on which to leave the laws of supply and demand to determine prices.

If the laws of supply and demand bring back the pre-war level of prices on that basis well and good, but the pre-war level ought not to be forced by a forced return to the gold standard.—I am, Sir, your obedient servant,

Wm. Leighton Jordan.

Royal Societies Club, St James's street,

INDIAN CURRENCY POLICY.

TO THE EDITOR OF THE ECONOMIST.

Sir,—The letter published in your issue of 24th inst. from your Bombay correspondent, Mr B. F. Madon, who, if I judge rightly from his name, is a Parsee, appears to me to be, like the recent actions of the Government of India in currency and exchange matters, a curious mixture of right and wrong.

He states that the change of India's standard unit has altered the relation between debtor and creditor, but the change of the unit has not yet taken place, and his fears may therefore be premature. The latest announcement of the Government of India, on June 21st, declared that they proposed to submit a Bill at the next session of the Legislative Council "prescribing" (whatever that may mean) the new ratio of one sovereign = 10 Rs, but such a Bill, if submitted, would probably not be passed, as it would meet with strenuous opposition, not only from responsible Indian opinion, but also from the Chambers of Commerce, as long as, as Mr Madon rightly points out, one sovereign will purchase enough silver to coin into 15 Rs.

Mr Madon again says that the change in the unit "has also added to the resources of the Indian Government," but in this he is at variance with the Currency Committee Report, which stated that the charge would involve the Government of India in losses that could not be made good for some years.

Even if the new ratio of one sovereign = 10 Rs is "prescribed," Mr Madon need not be afraid, as he will be able to export his sovereigns to countries which badly want them, and buy foreign produce with them at prices that will probably still make them really worth 15 Rs.—Yours faithfully, F. W. S.

Books and Publications.

PRE-WAR DEMOGRAPHY.

"Bulletin de l'Institut Internationale de Statistique." Tome XX. 2e Livraison. La Haye: W. P. Van Stockum and Fils. (pp. 1539.)

This massive volume contains the reports and papers laid before the Institut International de Statistique at Vienna in 1913. Many have now only a historical interest; of the rest, we may note Prof. Irving Fisher's suggestion of an international conference on the cost of living, which now comes with added force; Señor Echegaray's attempt to interpret the statistics of the population of Mexico; and M. Neymarck's report on the world's holdings in negotiable securities—850 milliards of francs at the end of 1912. From this last document, filling some 300 pages, much might be picked out of great significance at the present crisis.

BARCLAYS BANK
LIMITED

(with which has lately been amalgamated the **London Provincial and South Western Bank Ltd.**).

Head Office: 54, Lombard Street, London, E.C.3.

This Bank is in close touch with leading Bankers in all parts of the world, and provides facilities for the financing of every description of Overseas business.

Traders interested in the Foreign Markets are invited to correspond with
THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

BOOKS RECEIVED.

Short Papers on (1) A Capital Levy as a Means of Taxation, (2) The Present Unrest in Industry, (3) Capital and Labour, and (4) The Nationalisation of Industry. By W. W. Paine. (London) Effingham Wilson. 2s.

These papers were contributed by Mr Paine, one of the general managers of Lloyds Bank, to its monthly financial report. They discuss important problems in a spirit of highly practical common-sense, which is too rarely applied to economic questions, and are expressed with admirable clearness.

The Real Cost of the War. An Address delivered by Edgar Crammond, F.G.S., to the Institute of Bankers. June 7, 1920. Printed by William Brown, 40 Old Broad street.

An enormous amount of work has been put by Mr Crammond into this paper, which endeavours to arrive at the real cost of the war to the United Kingdom, the British Empire, Europe, and the world as a whole. Conjecture necessarily plays a large part in the process of arriving at conclusions on this enormous question, but Mr Crammond has a gift of marshalling figures in a way that interests, if it does not always convince. Broadly, his conclusion is that the United Kingdom has suffered a moderate decrease in wealth through the war, but that the Empire, as a whole, is richer, that Europe is the great loser, and that America and Japan have been substantially enriched.

The Early English Cotton Industry. With some unpublished letters of Samuel Crompton. By George W. Daniels, M.A. Introductory Chapter by George Unwin, M.A. (London) Longmans, Green and Co. 8s 6d net.

A Philosophy of Social Progress. By E. J. Urwick. (London) Methuen and Co., Limited. 7s 6d.

A revised second edition. The author, starting from the standpoint of modern sociology, passes beyond this to a philosophic analysis of the methods and purposes of social change.

Annuario Statistico Italiano. 1917-1918. (Rome) 5 lire.

This is the official record of the "Central Board of Statistics," a department of the Italian Ministry of Industry, Commerce, and Labour, under the control of the well-known statistician, Prof. A. Aschieri. "Annuario Statistico Italiano" was first published in 1878, and was subsequently issued at intervals till 1911, since when it appeared regularly every year up to 1916. The war created, unfortunately, difficulties in keeping the records up to date. It has only been possible to publish records up to 1918. Previously the Central Board of Statistics have been able to publish in the course of each year the records of the preceding one. It is the most accurate and reliable statistical record in Italy, and deals comprehensively with the whole life of the country. The work consists of 530 pages, closely printed.

Annuaire Statisque de la Belgique et du Congo Belge. 1914 (Brussels) A. Lesigne, Rue de la Charité 27. 10 francs.

Belgium. Chemins de Fer et Service l'Electricité. Operations Pendant l'Année 1913. (Brussels) Ministry of the Interior.

Overseas Trade. Dominion Touring Exhibition. (London) Department of Overseas Trade, 35 Old Queen street, S.W. 1.

It is proposed to exhibit selected samples of British manufactured goods in South Africa, Australia, New Zealand, and Canada. Further particulars can be obtained from the address given above.

Royal Commission on Decimal Coinage. Minutes of Evidence and Appendices. (London) H.M. Stationery Office. 5s net.

Industrial Stability. (Philadelphia) The Annals of the American Academy of Political and Social Science. 36th street and Woodland avenue.

The Egyptian Problem. By Sir Valentine Chirol. (London) Macmillan and Co., Limited. 7s 6d net.

The Industrial League and Council Journal for Employers and Employed. Special Number, Manchester Convention, July, 1920. (London) 82 Victoria street, S.W. 1.

American Capital for a Greater Italy. By Luigi Criscuolo. (New York) Italian Metropolis Club.

Brush—Ljungström. (London) Brush Electrical Engineering Co., 11 Arundel street, W.C. 2.

An interesting illustrated catalogue of steam turbine and turbine generators.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
August 11.	August 12.

It might be supposed, from comments made in the Stock Exchange and in the newspapers at the present time that the existing condition of affairs in markets for securities is abnormal in its quietude and listlessness. In point of fact, and as everybody really knows, this time of year represents the slackest tide in the affairs of the Stock Exchange so far as business is concerned, and that for another month there is likely to be nothing doing of any consequence. This year there are peculiar handicaps pressing upon business, in the way, for instance, of taxation, foreign affairs, the Irish chaos, and industrial unrest. But as every year has its own circumstances which militate against August activity, it may be said that the present idleness on the part of the investor and the speculator is no more than seasonal.

Several new Corporation stocks are promised for next week, although the experience of Coventry, Sheffield, and Middlesbrough 6 per cent. issues is not very stimulating, underwriters of the first named being left with 74 per cent. of their liability, while in the case of the other two the underwriters received 80 per cent. The prices of the various stocks are at a small discount. Various industrial new issues have, however, gone pretty well, and premiums are established on the new 7 per cent. notes offered by Vickers, the Imperial Paper bonds, Rylands' preference, Debenham's preferred, and others. The War Loan continues to be a dull market, nor is there any noticeable strength amongst the Consol group, although the firmness of Funding and Victory is not without significance. The Foreign Bond market continues to be the hunting-ground for those on the look-out for bargain stocks, but movements on the week are narrow, and buyers require to be tempted with low prices before they will take stock.

The pother over railway fares exercised little influence amongst the ordinary stocks of the Home Railway market. The general idea is that the increased fares will not make much difference to travelling on the part of the public, although they may afford a stimulus to motor-competition of a kind which is unlikely to exercise appreciable effect upon the aggregate sum received by the railways. Prices are heavy for choice. The Undergrounds are better, because a rise in fares, however small, may make a vast difference to the companies, which carry such multitudes of passengers. Grand Trunks, Mexicans, and Brazilians lean to the lower side. The Argentine list proved particularly susceptible to a little selling in the absence of support. Canadian Pacifics gave way a dollar or two, because of the labour difficulties on the line, and their possible effect upon the dividend.

Further shrinkage in the price of raw rubber induced heaviness amongst Rubber shares. Exceptional strength is shown by Straits (Settlement) Bertams, which improved on a good report, accompanied by the promise of a new issue of shares which will afford a bonus to proprietors. Nor has the Tea market recovered from the flatness brought about by the condition of affairs in the tea trade itself. Immediate hopes of a recovery in Tea are based upon the somewhat slender foundation of the hope that affairs in Russia may take a turn for the better, which might bring about a renewal of the demand from Russian tea-drinkers. Amongst Oil shares, Shells have been a dull spot on sales by America, and also by those on this side who delayed realisations until the new shares were issued. Mexican Eagles keep tolerably steady, the production figures from Mexico being excellent. A somewhat unpleasant feature in the Oil market is renewed activity in rubbish shares, while the leaders suffer neglect—in comparison, that is, with the activity characterising them six months ago. Among Meat shares Eastmans spurted sharply, on the company's notification that negotiations are afoot with another undertaking, but the rest of this section is still under a cloud. Shipping shares have further fallen, owing to the uncertainties which surround the market for freights. In the Banking list, a few small declines occurred amongst London shares. Various Iron and Steel issues are easier, Cardiff and the West of England bringing mild selling pressure to bear upon a tired market. An unexpected improvement in the Kensington Electric interim dividend had no effect upon the prices of shares in the Electric section, and gas stocks are unchanged, the assumption being that the labour trouble in the trade, although it has reappeared, will be smoothed over. In other sections of the Industrial market, tobacco, catering, wireless, drapery, stores, cable, there is so little doing as to lead prices gently downwards. Gordon Hotels continue flat, on the disappointment felt with the profit

published in respect of the last year. A pleasant feature is the strength of Egyptian shares, the buyers still coming from Cairo and Alexandria.

The Kaffir market talks cheerfully in default of any active business to help prices, which, however, are well held on account of a fresh rise in the price of gold. There was a little selling from this side, counteracted by support from the Cape. Paris has been in a selling mood, and this is reflected in the price of Rio Tintos. Rhodesians flickered up a trifle in the middle of the week, without re-attracting any public attention. The Russian Mining shares gave way after showing some disposition to advance. Mexicans are almost motionless. The Broken Hill strike is said to be on the eve of settlement, but this statement has been made so often on previous occasions that now it is regarded with caution. The feature amongst Tin shares has been the strength of Siamese, other Malayans being more or less ignored, while, in the West African market, Tin Areas continue flat, on the expectation that more money will be required. Burmah Corporations rose to 10, at which price selling limits were uncovered, and the price consequently went back a little, despite publication of reorganisation details. In other Mining sections there has been no special feature. Notwithstanding the fact that this is the dead season of the Stock Exchange year, the price of Nominations has hardened to about 75. The list of new candidates for Stock Exchange membership in respect of the year now current is still 5 short of the round hundred.

NEW ISSUES.

5-15 Year Treasury Bonds, repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. These are still on offer. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

London Housing Bonds.—Registered bonds for £5 each or multiples thereof are obtainable for terms of 5, 10, or 15 years, at applicant's choice. Six per cent. interest and full repayment when due guaranteed by the London County Council on the security of London's rates. Interest payable each September 30th and March 31st. The money will be applied solely for the purpose of housing schemes approved by the Government, and in particular to finance the housing schemes of the Metropolitan Borough Councils. We referred to these bonds in a leader in the *Economist* on June 12th, page 1282.

Amalgamated Paper Mills, Limited. — Authorised capital £900,000, divided into 400,000 8 per cent. cumulative participating preference shares of £1 each, and 500,000 ordinary shares of £1 each, the whole of which are offered for subscription at par. The cumulative preference shares will be entitled to a further 25 per cent. of the undivided profits after 8 per cent. has been paid on the ordinary, and applicants will have the right to subscribe for and be allotted four ordinary shares for every five preference applied for. The company has been formed for the purpose of acquiring the business of Edward Collins and Sons, Kelvindale, Maryhill, Glasgow, and Henry and Leigh Slater, Harter street, Manchester, and Lower Mills, Bollington, near Macclesfield, as going concerns. The company will have assets in land, buildings, fixed plant, stocks, &c., the value of which has been certified as £900,575, and although the two businesses can show a combined record of well over two centuries, no amount is included for goodwill. But profits are given from 1916 only. The statement of affairs as to the purchase price of the company is not clearly set out. The prospectus, however, mentions that "the difference between the price paid by the company to the vendor syndicate and the total of the several sums which have been or are being paid out by the syndicate is £99,748, but the syndicate are handing over to the company accrued profits estimated to amount to at least £75,000 on the basis of the auditors' certificate." High profits are being earned at present, but the ordinary shares are subject to a fairly high degree of industrial risk. The preference shares are moderately attractive.

Bullers, Limited.—Authorised capital £400,000, of which £305,000 is fully paid up. Issue of £250,000 first mortgage 6 per cent. (free of income-tax) "redeemable" debentures (registered). These debentures will be "repayable" on or before August 1, 1946, by annual drawings at 102½ per cent., and they will be secured by a trust deed constituting a first specific charge on the company's land, buildings, and plant, in addition to a floating charge on assets. The works of the company are situated at Tipton, Hanley, and Milton (Staffs), and comprise plant for manufacturing the porcelain and pottery materials used for the construction of telegraph, telephone, and electrical power transmission lines, insulators, &c. The company's balance of assets is stated at £712,009. Profits are given from 1913. This is a good offer in its class.

Hayes, Candy and Co.—Authorised capital £400,000, divided into 20,000 cumulative 5½ per cent. "A" preference shares of £5 each, 100,000 7½ per cent. cum. participating "B" preference, and 200,000 ordinary shares of £1 each. Of the "A" preference £80,000 and of the ordinary shares £120,000 have been issued, and 80,000 of the "B" preference shares are now offered for subscription at par and 20,000 ordinary shares at the price of 22s 6d per share. The participating rights entitles holders of preference shares to receive further dividends, after the ordinary shares have received 10 per cent., of ½ per cent. for every additional 1 per cent. paid on ordinary shares. Subscribers for preference shares are entitled to have one ordinary share allotted to them for cash in respect of every four preference shares allocated. Applications for ordinary shares alone will not be considered. The company was formed in 1900 to acquire the business of Hayes, Candy, and Co., textile warehousemen and merchants. Net assets are valued at £174,658, exclusive of goodwill, and after deducting £80,000 to meet the liabilities of the first preference shares. Profits are given from 1915. The company has capitalised

£40,000 of "undistributed profits." This is a fair offer in its class, the preference shares being well secured, and the ordinary shares a speculative risk.

Commercial Cars, Limited.—Authorised capital £250,000 This is an issue at par of £250,000 10 per cent. (equivalent to 7 per cent. free of tax at 6s in the £ without allowing anything for the premium on redemption) first charge sinking fund debentures repayable at 105 per cent. on January 1, 1936. The prospectus states that "these debentures will be secured by a first charge on the whole of the assets of the company. These, as shown by the auditors' certificate as under, amounted on September 30, 1919, to £578,743, to which has to be added capital additions since September 30, 1919, amounting to at least £28,000, and a further £100,000, the nett proceeds of this issue, after repaying outstanding loans and the expenses of this issue, making a grand total of £706,743, showing the debentures covered more than two and a-half times over." It should be noticed, however, that no mention is made of any specific charge, trust deed, or trustee for debenture holders. The prospectus further states that "charges to the extent of £101,000 have been given to the Minister of Munitions upon the company's property in respect of a loan of that amount to the original company, the undertaking of such liability being further part of the consideration for the purchase of the said undertaking and assets." Is it to be understood that the loan from the Ministry of Munitions ranks after these debentures? Those who subscribe to the issue should remember that a high rate of interest carries with it commensurate risks.

Herrburger, Brooks, Limited.—Authorised capital £250,000, divided into shares of £1 each. This is an issue of 250,000 shares at par, of which 83,300 will be allotted in part payment of purchase price. The remaining 166,700 shares are now offered for subscription. Directors and friends will apply for 66,700 shares. The company has been formed to acquire the entire issued share capital of Brooks, Limited, Camden Town, and the goodwill of the English business of Jean Joseph Herrburger, of Paris. Both businesses undertake the manufacture of pianoforte actions. The purchase price is £150,000, of which £66,700 is payable in cash. Goodwills are valued at £30,000. Surplus assets of Brooks, Limited, are valued at £32,260, exclusive of goodwill. The selling rights acquired from Mr J. J. Herrburger appear to be somewhat highly valued on the information offered in the prospectus, while the assets of Brooks, Limited, appear to be relatively small as compared with purchase price. On the other hand, the names of the directors are sufficient indication that this is an undertaking which has the support of representative men in the piano industry. It is a business which might yield excellent profits, but it is a venture only suitable for the opulent investor.

The Telephone Manufacturing Company (1920), Limited.—Authorised capital £600,000 in ordinary shares of £1 each. Up to date (including the present issue) 410,000 shares have been issued. This is an offer for public subscription of 100,000 shares at par. The company was formed in May, 1920, to take over an "organisation" for the manufacture, installation, and maintenance of a method of intercommunication telephone known as the "New System." The company acquires the assets of the Telephone Manufacturing Company, Limited, and the entire issued share capital of 13 allied installation companies. The purchase price has been fixed at £307,400, payable in shares of the new company. The trend of the business world towards large central institutions may favour a company of this kind if efficiently conducted. Good profits were earned in 1919. We should like, however, a little more information as to the value of the assets of the various installation companies, the shares of which are valued at £185,225. It should be noticed that net assets are valued at £304,668, exclusive of goodwill, but including the proceeds of the present issue, and against this there is a total issued share capital of £410,000.

Coal Saving and Smoke Consuming Company, Limited. Authorised capital £60,000, divided into shares of £1 each. This is an offer for subscription of 45,000 shares at par. The company has been formed for acquiring and taking over, as from May 1, 1920, from the Oldbury Manufacturing Company, Limited, as a going concern, their business carried on at Consumist Works, New Meeting street, Oldbury, and providing capital for the further development of the Thomas Coal Saving and Smoke Consuming Apparatus and Thomas Patent Refuse Destructor, and of dealing with the foreign and colonial patent rights. The purchase consideration is £30,000, payable as to £15,000 in cash and the remainder in shares An optimistic estimate of profits is given, but the issue is too speculative for the cautious investor to share in.

Olives Paper Mill Company, Limited.—Authorised capital £200,000 in ordinary shares of £1 each, all of which have been issued. There are also 8 per cent. debentures for £150,000. This is an offer for sale of 190,000 ordinary shares at par. In the statement of affairs issued, profits of the company are shown before providing for excess profits duty for 1917, 1918, and 1919. Assets (less liabilities) amount to £339,188. The business of Olive Bros., Limited, was established in 1893, but we are given no information concerning its profits as to its history between this date and 1917. The vendors of the shares paid 20s each for them, less a commission of £8,000. But out of this commission expenses in connection with this offer for sale are to be paid. The vendor syndicate appear to be satisfied with a moderate profit on the transaction. We are informed that the issue has been over-subscribed.

Benson and Hedges, Limited.—Authorised capital £220,000, of which £120,000 has been issued, and is fully paid. There are no debentures. This is an issue at par of 60,000 10 per cent. second cumulative preference shares of £1 each. Profits are given from 1911. The prospectus states that "the free assets of the company, as shown by the balance-sheet at December 31, 1919, with the estimated proceeds of the present issue, amount together to £181,000." What exactly is meant by "free assets"? The issue is too speculative to be suitable for the ordinary investor.

Sovereign Shipping Company, Limited.—Authorised capital £90,000, divided into 45,000 ordinary shares of £1 each, and 45,000 10 per cent. tax free cumulative preference shares of £1 each. These preference shares are entitled to rank equally with the ordinary shares in any distribution over 10 per cent. The company owns the s.s. "Cardiff," 4,600 tons d.w., which boat was acquired for £90,000. This is an offer for sale of 20,000 preference shares at par. The statement of this offer is not very informative. No independent valuation of the boat is given. The issue is one which should be left to those with a personal knowledge.

The Issuing and Underwriting Corporation, Limited.—Authorised capital of £20,000, divided into 12,500 12½ per cent. participating preference shares and 7,500 ordinary shares of £1 each. The vendors take the ordinary shares in full settlement, and the preference shares are offered for subscription at par. After the preference shareholders have received 12½ per cent., the ordinary shareholders receive the remainder up to 12½ per cent., any surplus profits to be divided as follows: 40 per cent. to be placed to a reserve fund, 40 per cent. to preference shareholders, and 20 per cent. to ordinary shareholders. The advertised prospectus states that the corporation has been formed to carry on the business incidental to financial corporations throughout the British Empire and abroad, but as to the more detailed intentions of the corporation, is vague. If seeking an investment in an undertaking of this description investors should favour those companies which have (1) capital of sufficient amount to handle any financial proposition which may come along, and (2) a board of directors composed of well-known city financial experts. If an issue does not fulfil these tests, then the shares should be left to those with an intimate knowledge of the directors or promoters.

Rapson Automobile Patents, Limited.—Authorised capital £250,000, divided into 249.300 ordinary shares of £1 each and 700 deferred shares of £1 each. There are now issued 150,000 ordinary shares of £1 each, offered at 21s per share. The ordinary shares are entitled to a dividend of 15 per cent. and to a further one-fourth of profits, the remaining three-fourths going to holders of deferred shares. The price payable to Mr Rapson for his patents is £35,000 in cash and £67,500 in ordinary shares. It is difficult to understand why in addition to paying what may or may not be a fair price for the patents, investors should be asked to pay a premium for shares which, if the company is successful, will be burdened by sums payable to deferred shareholders.

Wilkinsons, Limited.—Authorised capital £50,000, divided into 30,000 10 per cent. participating preference shares of £1 each and 20,000 ordinary shares of £1 each. The preference shares are further entitled to one-tenth of surplus profits after payment of 2½ per cent. commission to directors and a 10 per cent. distribution to ordinary shareholders. Subscriptions are invited for 20,000 preference and 4,000 ordinary shares at par. Every subscriber for five or more preference shares is entitled to apply at par for one ordinary share. The company has been formed to take over Wilkinson Brothers, of Knightsbridge, London, distributors of eggs, butter, poultry, &c. The purchase price is £25,993, payable in shares. Of this sum goodwill represents £16,000. A firm of accountants supply the actual sales of the business for three years, but this cannot be considered a satisfactory substitute for a certificate of profits. Further, we are in the dark as to the value of assets. We cannot recommend the issue.

Frank Sugg, Limited.—Authorised capital £50,000, divided into 7,500 6 per cent. cumulative preference shares of £1 each and 42,500 ordinary shares of £1 each, of which 5,254 preference and 16,972 ordinary shares have been issued. The present offer is of 10,000 ordinary shares at par. The company was formed in 1906 to take over the business of athletic outfitters founded by Messrs Frank and Walter Sugg, the well-known cricketers. The head office is at Liverpool, and branches are established in London, Rotterdam, Antwerp, and elsewhere. Profits are given only from 1918. The prospectus gives no statement of assets or liabilities. On the information offered it is difficult to form an opinion upon the merits of the undertaking. There must be a considerable

amount of goodwill in the name "Sugg," and the fact that the chairman of the Everton Football Club, Limited, is a director is also a favourable point. The careful investor, however, will require further details before subscribing.

Evron, Limited.—Authorised capital £75,000, divided into 65,000 "A" 8 per cent. cumulative participating preference shares of £1 each, 80,000 "B" 8 per cent. cumulative participating preference shares of 2s 6d each. These "A" shares are further entitled to participate in profits to an extent of 30 per cent. According to the advertised prospectus, the company has been formed to acquire the rights in a patent sparking plug for internal combustion engines, and other patents. The purchase price of these patents is £15,000 in cash, but the vendors have agreed to apply for 7,000 "A" and 48,000 "B" shares. It is rather curious that the company should describe all their shares as "preference." The issue is speculative and not suitable for the ordinary investor.

Alliance Glass Works, Limited. — Authorised capital £25,000, divided into 22,000 10 per cent. cumulative preference shares of £1 each and 60,000 ordinary shares of 1s. each. This is an issue of 20,000 preference shares, and a similar number of ordinary shares. Applicants for preference shares will be entitled to apply for an equal number of ordinary shares. No application for ordinary shares only will be entertained. The company has been formed to acquire and develop a glass-works. The works to be acquired are independently valued at £7,200 as a going concern. The purchase price is £6,100. This is a proposition which may develop into a prosperous concern, but it is too speculative for the small investor to interest himself in. Investors should also consider the question of locking up capital in a small concern. In case of any sudden need for cash, investors may find considerable difficulty in realising shares in small companies, owing to the necessarily restricted markets. These last remarks, of course, apply equally to all small companies.

Amalgamated British Trades, Limited.—Authorised capital £150,000, divided into ordinary shares of £1 each, of which 100,000 are now offered for subscription at par. The company has been formed to acquire (a) the business of Noel Bros., Limited, of Cardiff, manufacturing clothiers and general merchants, and (b) the business of Suplyawl, Limited, of London, manufacturers and dealers in automobiles, &c. The purchase price has been fixed at £57,000, being £45,000 for Noel Bros., Limited, and £12,000 for Suplyawl, Limited. These amounts are payable in cash. Assets of Noel Bros., Limited, are valued at £20,000, and those of Suplyawl, Limited, are certified at £7,550. No mention is made of past profits, and we are in the dark as to the financial history of the two companies. Even the statement that directors and friends have agreed to subscribe for 60,000 shares does not, in the absence of such information, inspire us with conviction that the company will have a prosperous future, and we must advise investors to leave the undertaking alone.

Commercial Amalgamations Trust, Limited.—Authorised capital £500,000, divided into 460,000 preferred ordinary shares of £1 each and 800,000 deferred ordinary shares of 1s each, of which 73,140 preferred ordinary and 413,140 deferred ordinary have been issued. This is an issue of 386,860 preferred and a similar number of deferred shares, at par. The directors have been allotted 400,000 deferred and 60,000 preferred shares for cash. The advertised statement informs us that the company has been formed for the purpose of assisting financially sound industrial companies. The above information is extracted from an advertisement. We have endeavoured to obtain a copy of the prospectus, but so far without success. Investors should read our remarks elsewhere in these columns with reference to another company formed for general finance purposes. Without the prospectus in front of us it is difficult to arrive at conclusions, but the facts given in the advertisement are not sufficient to tempt the shrewd investor.

Streatham and District Sports Club, Limited.—Authorised capital £10,000, divided into shares of £1 each. Issue at par of 7,000 shares. The company has been formed to purchase freehold ground in Frant road, Thornton Heath, for the purpose of developing it as a sports ground. The land is independently valued at £6,000, which is the price fixed for the purchase. The issue is one entirely for those with knowledge of local conditions and the capabilities of the directors.

Calcutta Electric Supply Corporation, Limited.—Letters of allotment in respect of the debenture issue have been posted.

ACTIVE SECURITIES.

COMPANY MEETINGS, &c.

NATIONAL BANK, LIMITED.

SATISFACTORY POSITION.

WAGES AWARD.

The half-yearly general meeting of the directors and shareholders of the National Bank, Limited, was held, on the 22nd instant, at 34 College green, Dublin, Sir John Purcell, K.C.B., chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, said :—I think everyone will agree that the position of the bank is very satisfactory. There is no change in the paid-up capital. It remains at £1,500,000. The next item in the balance-sheet is the "Rest." By the addition of £65,000 during the past twelve months, we have raised it to £800,000. The "special reserve" remains at £180,000. As compared with twelve months ago, "Notes in circulation" have gone up by £116,000. The large figure of £4,088,000 which appears under this head must, as I have, on a former occasion, remarked, be regarded as an evidence of Ireland's material prosperity. I believe it to be due to trade conditions in the direction of activity in business—to the fact that gold coin is no longer a medium of barter, and loose cash—in the form of paper—is carried for daily wants, and further to the high prices of commodities and, in a measure, to the large increases of wages now being paid. "Deposit and current accounts" show an increase of £5,256,000. Of this amount £4,840,000 have been provided by our Irish customers. "Acceptances to bankers' drafts" have gone up by £244,000.

Turn now to the assets side of the balance-sheet. Here the first item, "Cash on hand," is increased by £416,000. The next item, "Money at call and at short notice," has decreased by £1,794,000. This is accounted for by the employment of a large amount of money advanced on securities, owing to greater demands for accommodation from the trading community. This is reflected in the increase of £6,398,000 under the head of "Advances."

The "Government securities" show an increase of £122,000, but "Corporation stocks" have decreased by £33,000. The former is due to further investments in War Loans, and the latter to some of our holdings having been paid off at maturity.

"Advances on securities" have gone up by £6,398,000. Of this sum of £3,788,000 has been advanced in our English provincial and Metropolitan branches—pointing to a continued large development in that section of our business. The balance has been lent in Ireland.

"Bills discounted" have increased by £327,000. This is also owing to trade expansion. The item "Bank premises" has gone up by £29,000, due to the opening of new branches. On reference to the "Profit and loss" account, it will be seen that our expenditure has been increased by not less than £72,000; the bulk of this has gone into the pockets of the staff. We pay the usual dividend of 12 per cent. Owing to the recent large addition to staff salaries, allowances, &c., and to the present heavy depreciation in Government stocks, nothing has been carried, on this occasion, to the "Rest." The directors have had to make provision for increased taxation under the Finance Bill, and for contingencies, and a sum of £70,000 has been set aside for the purpose. Full provision has been made for bad and doubtful debts. £28,238 has been carried forward to profit and loss new account. Summarising the totals, it will be seen that our aggregate means stand at £44,530,000, whilst our liquid assets give a proportion of 60 per cent., as against our liabilities payable to the public on demand.

Trade conditions generally may be described as satisfactory.

SALARIES AWARD.

I have now to report that we have carried to completion the terms of the award made as the outcome of the arbitration between the boards of the Irish banks and their staffs, which was held in March last upon the question of salaries, when the Lord Chancellor kindly consented to undertake the office of referee. I submit that the directors engaged upon it and the officers selected to assist them deserve no little gratitude for the care and dispatch with which it was effected.

Under the award, the initial additional charge thrown on the bank's revenue for the current year will run into a sum of not less than £70,000. This increase followed upon increments granted by the directors of their own motion at the close of the year 1919 amounting to a figure of some £40,000 per annum. These large sums, coupled with a pension list of £23,000 per annum, and taking into account the amount of income-tax which is paid by the bank on both salaries and pensions, have advanced our expenditure under the head of establishment charges to nearly £370,000 for the year 1920, or an increase of just over £120,000 compared with corresponding establishment charges for 1919; and it may be safely estimated that the automatic increases resulting from the award will, year by year, for some considerable time entail a further additional charge of approximately £10,000 per annum.

After some discussion and questions, the report and accounts were unanimously adopted, and the usual formal business terminated the proceedings.

BANK OF ROUMANIA, LIMITED.

PROGRESS AND DEVELOPMENT OF ROUMANIA.

The ordinary annual general meeting of the Bank of Roumania, Limited, was held, on the 28th instant, at Winchester House, Old Broad street, London, the Earl of Bessborough, K.P., C.V.O., C.B., presiding.

The secretary (Mr H. Locke) having read the notice convening the meeting and the report of the auditors,

The Chairman said : Gentlemen,—I assume that, as usual, you will take the directors' report and the balance-sheet as read. In moving the adoption of the report and accounts up to the end of December last, I would draw your attention to the considerable growth of the figures in the balance-sheet as compared with those in our previous one. The principal increase, as you will notice, is in the cash in hand. This is due in a large measure to the heavy deposits in Roumanian currency which have been made in Bucharest on behalf of exporters to Roumania, either in payment of goods awaiting a more favourable rate of exchange before being remitted abroad, or in the shape of deposits by the importers as security for payments in foreign currencies to be effected at some future date.

As mentioned at the foot of the balance-sheet, these deposits in lei, and also their counterpart, including cash in hand in Roumania, have been calculated at the rate of 25 lei to the £.

As you will see by the report, the trading accounts for the year, after making provision for bad debts, &c., writing down investments in British Government securities to market value, placing £2,000 to pension fund and valuing the lei profits at the rate ruling on December 31st last, show, after payment of income-tax, a credit balance of £2,673 5s 3d. This sum has been carried to a special reserve account. The abnormal rate of exchange has, of course, adversely affected the result of the year's working.

Since the date of our last meeting the boundaries of Greater Roumania have been fixed by the Peace Conferenc, and the Kingdom of Roumania is now a country of approximately 100,000 square miles, with a population of about 15,000,000. This extension, when conditions more nearly approach the normal, will, no doubt, afford us plenty of scope for development.

RECONSTRUCTION IN ROUMANIA.

During the past year Roumania has, in common with other countries, passed through a difficult period of economic, financial and commercial reconstruction, and I am pleased to say that very great progress has been made during the year, in spite of the fact that the country has been faced with the problem of higher prices and scarcity of labour in an acute degree. As an instance of the progress that has taken place, I may say that the improvement in the organisation of the Roumanian State Railways has been most marked.

In the reconstruction the new provinces of Bessarabia, Transylvania and the Bucovine have each taken their respective parts, Transylvania in particular with her industries contributing to an appreciable extent.

The oil industry, owing to local conditions, has not so far developed to the extent that was anticipated. For the moment the principal resource of the country is the production of cereals.

With regard to the prospects for this year's crop, I may say that the full area is not under cultivation, but that the latest advices as to the prospects of the harvest are excellent. Possibly the favourable expectations of this may be responsible for the recent improvement in the rate of exchange.

I am pleased to inform you that this bank has been appointed an agent for the Board of Trade in connection with its export credits scheme, and I hope the facilities offered by the Board of Trade will play an important part in the rehabilitation of the economic life of Roumania. I may mention that the Ministry of Labour has asked me to refer to the question of the employment of ex-Service men. I may say that we have done all we can in this connection, and a number of them are in our employ. I hope that our example will be followed by other employers. In conclusion, I would like to acknowledge with thanks the admirable manner in which the managers and staff have conducted the busi-

ness of the bank both at home and abroad under very trying circumstances.

Viscount Goschen seconded the resolution.

The Chairman invited questions, but none were asked, and the motion was carried unanimously.

Viscount Goschen moved the re-election of the retiring director, Lord Bessborough.

General the Hon. Sir H. A. Lawrence, K.C.B., seconded the resolution, which was unanimously agreed to.

On the motion of Mr A. Hood, seconded by Mr J. W. Hoskins, Messrs Jackson, Pixley, Browning, Husey and Co. were re-appointed auditors to the company.

Mr J. Rosselli moved a vote of thanks to the chairman, the directors, and the management and staff for their services during the past year.

Mr E. C. Barter seconded the resolution, which was unanimously approved, and the Chairman having briefly responded, the proceedings terminated.

UNION BANK OF AUSTRALIA, LIMITED.

SATISFACTORY RESULTS—INCREASED DIVIDEND.

The annual general meeting of this bank was held on the 26th inst., at 71 Cornhill, London, E.C., Mr Henry P. Sturgis (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the results of the past year's working must have been received by the shareholders with great satisfaction. After providing £20,000 in reduction of bank premises in Australia and New Zealand and adding £60,000 to the reserve fund, which now stood at £2,630,000, the directors were able to declare a dividend for the year at the rate of 15 per cent., free of income-tax, as against 14 per cent., the rate paid for several years past. The figures, compared with those of February, 1919, showed a strength of £7,640,000. The principal increases on the liabilities side were:—Capital, £500,000; reserve, £560,000; bills payable, £724,000; and deposits, £5,705,000. The last-named were chiefly free deposits arising from satisfactory results from various industries, such as farming and grazing, and increasing money in circulation through expenditure of Government loan funds. Deposits, however, were likely to be reduced by payments of customers for Government taxes and subscriptions to the new Commonwealth loan for £25,000,000 about to be issued in Australia. On the assets side there were increases in specie, £372,000; money in London, £535,000; and bills receivable, &c., £8,917,000. The large expansion in the last two items was chiefly due to the heavy disbursements made by the Imperial authorities in London in respect of Australian wool and other produce purchased by the Government, resulting in a large accumulation of funds in London, which were temporarily invested in British Government Treasury bills, &c., pending opportunities for transfer to Australia for employment there. Since the date of the balance-sheet these funds had been considerably lessened by transfers to Australia. A considerable portion of the increase in bills receivable, &c., was represented by the increased trade of Australia and New Zealand, which was a very satisfactory feature. Advances showed a decrease of £2,156,000, due to repayment in Australia of advances to the wheat pools, but since the date of the balance-sheet there had been a satisfactory increase.

The liquid assets amounted to 11s 8d in the £ of the bank's total liabilities to the public, as against 7s 6d a year ago. Expenses in the colonies were some £44,000 higher than a year ago, due chiefly to increase in salaries, £26,000, arising partly from the return of demobilised soldiers, and taxation, £13,000. In Australia great unrest had continued in connection with labour. In New Zealand, although the season had been somewhat unfavourable, there was marked prosperity, and the Dominion had not suffered so much as Australia from labour disturbances. Weather conditions in the Commonwealth were most unfavourable. In the last two months, however, the position had been greatly relieved by beneficial rains, and the pastoral and agricultural outlook had considerably improved.

The Earl of Chichester seconded the motion, which was carried unanimously.

HUDSON'S BAY COMPANY

ANOTHER YEAR OF PROSPERITY.

A general court of the Governor and Company of Adventurers of England trading into Hudson's Bay was held, on the 30th instant, at the City Terminus Hotel, Cannon street, London. Sir Robert M. Kindersley, G.B.E. (Governor of the company), presiding.

The Governor, in moving the adoption of the report and accounts, first of all dealt in detail with the figures in the profit and loss account and the balance-sheet, and, continuing, said that with regard to the fur trade, the company had enjoyed another year of considerable prosperity. During the past few years they had had, perhaps, more severe competition than ever before, but, properly understood, this should only be a spur to greater efficiency, and he saw no reason to be anything but confident of the future prospects of that department. There had been, as shareholders were no doubt aware, a sudden and severe drop in the price of practically all furs. In this connection he must mention that the company's large and organised competitors were subject only to Canadian taxes, while the Hudson's Bay Company were subject to both English and Canadian taxes. Luckily for the Hudson Bay Company, they had a unique and peculiar influence with the native, owing to its long association with, and fair treatment of, him, dating back 250 years. He did not hesitate to say that, but for this wonderful asset they must have been overwhelmed during the last few years. As to the land department, the sales of farm lands declined by 5,952 acres, and by £52,193 in value; on the other hand, their town lot sales increased in value by £6,478. During his stay in Edmonton he visited the company's reserve, and found little, if any, building had been done. At the same time, there was great shortage of houses in the city, and, after consultation with the directors, by cable, it was decided to at once commence building houses for persons of moderate means on the company's unsold lots. This development of their own lands was a new departure on the part of the company, but he was convinced that it was a practice to which they would have to resort increasingly in the future if they were to get the best out of their town lots. The directors were now considering how this development could best be carried out on a large scale, and it was possible that the shareholders might be called together in the near future to put certain proposals before them which were now under the consideration of the board.

FARM LANDS—ENCOURAGING PROSPECTS.

With regard to farm lands, their prospects were certainly encouraging, with the exception of certain portions of Alberta. The farmers were reasonably prosperous, and were increasing the size of their farms. The prospects of a good crop in Alberta, as well as the other two provinces, were very bright, and the board looked for a large demand for the company's lands in the coming year.

Canadian taxation on their land was very heavy, and there was still a certain section of the public who believed—because they were told so by certain politicians in Canada—that the company was holding up its lands for high prices. He (the Governor) need hardly say that nothing was further from the truth; no company that was pursuing such a policy would sell land at the rate of $5,000,000 worth a year as they were doing. They were always willing sellers at a reasonable price to genuine buyers and settlers on the land, but they did not wish to sell to the speculator. The directors believed that both for the good of Canada and for the company, its lands were better in the possession of the company, so that it could be ready to offer a good choice of lands to prospective buyers who were likely to increase their holdings later rather than that those lands should be in the hands of speculators. Last year the board appropriated £13,000 for a special advertising campaign in the United States and Canada, and they now had coming due to them, in instalments on farm lands alone, over the next eight years, the large sum of $17,000,000 without calculating interest, and the character of the purchasing had been such that the directors believed that the great bulk of this might be counted as absolutely good.

TAXATION.

The taxes on farming land amounted this year to £189,825, against £124,758 last year, due to the imposition of surtax and Wild Lands tax. The judgment of the Privy Council on the question of surtax levied by the Province was unfavourable to the company, and they had paid £187,902 out of the reserve of £220,000 set aside on that account, and the balance remaining would be utilised to meet arrears. In his opinion there was no doubt that this tax was so devised as to specially penalise the Hudson's Bay Company, and there was equally, no doubt, in their opinion, that those who drew up the deed of surrender in years gone by specially worded the deed in order to prevent the company from being thus penalised. The wording, however, was not sufficiently well expressed, and they must accept the position as it was. The total disbursements for land taxation for the year 1919-20 were £255,000, in addition to the arrears under the judgment of £187,902, making a total of £442,920. In 1900 the disbursements under that head amounted to £17,839, while in 1910 they had risen to £56,970, while for the year just concluded, the figure was £255,017. He was glad to say, however, that from careful inquiries which he had made in Canada, he believed that so far as the company's farm lands were concerned the apex of taxation had been reached, and they might look for a steady reduction in the total amounts paid in taxes. There seemed to him to be signs, small though they were, of a revival in better-class real

estate, and the company's land department was making a very special effort to create an interest in town property wherever possible. Now that the war was over they had opened a special land office at Edmonton, and the Puget Sound Agricultural Company, the shares of which were almost entirely held by the Hudson's Bay Company, was about to enter upon an active campaign. He had felt it only right to deal fully with the matter of land taxation, but he did not want the shareholders to think he was gloomy about the future—he was not. The $17,000,000 due to the company on land was, he was convinced, a perfectly good asset. They would be paid practically the whole amount, and receive interest at 7 per cent. until it was paid. The company's remaining town sites were valued for assessment to-day at roughly $10,000,000. The terms of sales of farm land for the coming year, with the prospects of a good crop, were, in his estimation, quite good, and the outlook for townsites properties was better than for some years past, but they must not expect a rapid expansion on sales yet.

CONFIDENCE IN THE FUTURE.

While the directors had the utmost confidence in the future, the question of taxation had been causing grave anxiety, and it was because of the obscurity of the future in that respect that the directors thought it wise to deal with the pensions questions at once, so that they might face the coming years with a clean sheet. The position, briefly, was that while the company had its charter from the British Government, and was an English company, its trading was mainly in Canada. The consequence was that the company was taxed in each country. So long as taxation was reasonable, that point was immaterial, but the financial burdens which the war had cast upon the shoulders of belligerents in the Great War made it, he believed, almost impossible for any company to bear the war taxation of two countries about the same time. However, they might be managed, however firmly their roots might be established in their trade, in the end they must be crushed by the two-fold burden; and when hard times came, as come they must, their competitors who were not thus burdened would be able to beat them in the race and put them out of business. He did not want it to be thought that the Hudson's Bay Company was squealing because it had to bear its share of the cost of freeing the world from the greatest menace in history. It was not that; but they were being asked to pay twice over, and they were further penalised because of their age and the consequent large increase in the value of their assets. Their capital had never been inflated. The question of the double income-tax, under which they had suffered, was, apparently, on a fair way towards adjustment; but there was also the business profits tax in Canada. But probably the most important matter, so far as this company was concerned, was the fact that under English law they were not allowed to depreciate buildings at all for paying taxes, while other depreciation allowances were on a scale which, while they might be reasonable in an old-established company, were utterly inadequate in a young country like Canada, where so many buildings were, of necessity, of a comparatively temporary nature. It would, for instance, be impossible for them to attempt to develop their townsites on any scale so long as they were an English company. Force of circumstances was, therefore, driving the directors to examine carefully the possibility of turning some, at least, of their departments into purely Canadian enterprises, with a separate board of directors in Canada, controlling and administering its affairs.

With regard to their 250th anniversary, and their celebrations in Canada, he was glad to be able to tell them that everywhere these celebrations proved to be a complete success, and the public took the keenest interest in them. The celebrations certainly served to cement the good feeling between the company's staff and the directors, and to strengthen the goodwill for the company, which existed among hundreds and thousands of persons throughout Canada to-day. General conditions in Canada had, he believed, seldom been better, and he was immensely struck by the evidence of sound prosperity which one encountered.

Mr Chas. V. Sale (deputy governor) seconded the motion for the above report and accounts, which after discussion was agreed to unanimously.

BRITISH NORTH BORNEO (CHARTERED) COMPANY.

CONDITIONS IN NORTH BORNEO.

The seventy-fifth half-yearly meeting of the British North Borneo (Chartered) Company was held, on the 27th instant, at River Plate House, London, the Right Hon. Sir West Ridgeway, G.C.B., G.C.M.G., K.C.S.I., the president, presiding.

The secretary (Mr Harington G. Forbes) having read the notice and the report of the auditors,

The Chairman said that he had only recently returned from his visit to the territory, and had not been able to prepare the speech usual on these occasions dealing with the administration in 1919. He would therefore ask the secretary to read a report prepared in his absence, which would give the required information on those points. He would afterwards make some further remarks.

The secretary then read a lengthy report on the past year. It stated that the net revenue, amounting to £182,111, showed an increase of £11,118, equal to a good deal more than ½ per cent. on the total capital of the company. With a few unimportant exceptions, there was an increase under all headings of revenue. On the other hand, expenditure showed an increase of £23,278 over 1918. The food difficulty was dealt with by the president on his arrival. The situation had been aggravated by the failure of the Siam rice crop. One bright feature was the satisfactory yield of the native padi crop, which relieved the Governor of anxiety in respect to the food supplies of the native population. The enormous increase in the cost of living had rendered substantial increases in salaries imperatively necessary. The president dealt with it also when in Borneo. The aggregate cost of the concessions would be more than covered by increased railway and Customs rates. It was gratifying that, in spite of drought, food shortage, and high prices, the territory remained free from disturbances. As regarded industrial progress, there was abundant evidence that it was being well maintained. The most welcome feature was the increased value of exports, amounting to as much as 42 per cent., as compared with the previous year. The rapid expansion of the rubber industry was demonstrated by the noteworthy increase in the quantity of rubber exported—namely, 3,000,000 lbs. The area under cultivation had risen from 40,986 acres to 47,739 acres, an increase of over 16 per cent. Confidence in North Borneo as a rubber-producing country had been completely justified. The next important industry was timber, to exploit which a large company had been formed. Messrs Harrisons and Crosfield and the Chartered Co. had put up £225,000 between them, and £75,000 was issued to the public. No time had been lost in getting to work, and they looked forward to important results. Excellent progress continued to be made by the Cowie Harbour Coal Company, in connection with which there had been a reorganisation of capital, Messrs Harrisons and Crosfield subscribing for sufficient shares to enable the 7 per cent. debentures to be redeemed. The prior lien bonds had also been extinguished. The nominal capital had been increased to £500,000, and the Chartered Company and Messrs. Harrisons and Crosfield had an option over 172,000 shares. The other products of the country also showed progress, and the wireless system was working most efficiently.

ENCOURAGING PROSPECTS.

The President then addressed the meeting, and in the course of his remarks said: I think you will agree that the report and accounts before you, and also the report which has just been read, show very satisfactory results during the year 1919. Indeed, the progress has been remarkable. During the last 13 years the revenue has steadily increased year by year. Since 1906 the revenue has more than trebled, having risen from £112,765 to £373,935. The increased revenue during the past year is due to the growing prosperity of the country and the higher standard of life of the native population. Of course, expenditure has also increased, for if there had been no increased expenditure there could have been no increased revenue. There could have been no development, and consequently no progress. Now the war is over, speaking from what I saw on the spot, I can assure you that the prospects are most encouraging. The policy hitherto adopted was for the company to be content with the indirect advantages which flowed from the operations of subsidiary companies, which in most cases were floated by pecuniary assistance in addition to guaranteed interest given by the company. But the Court have now decided on a change of policy, which I trust will be approved by you. We think that instead of helping to float subsidiary companies and contenting ourselves with receiving moderate interest for our advances to different companies and repayment in course of time, we should take an active part in the industrial development of the country, invest our money in sound enterprise and get our share of the profits. The first fruits of this policy are to be seen in the new timber company, which, in co-operation with Messrs Harrisons and Crosfield, we have recently floated. The President concluded by moving the adoption of the report and accounts.

Mr Edward Dent (vice-chairman) seconded the motion, which, after some congratulatory remarks from shareholders, was carried unanimously, and a dividend of 5 per cent. was declared.

GLOUCESTER RAILWAY CARRIAGE AND WAGON COMPANY, LIMITED.

SATISFACTORY RESULT OF THE YEAR'S TRADING.

THE COMPANY'S SHARES IN BALDWIN'S, LIMITED.

The annual meeting of the Gloucester Railway Carriage and Wagon Company, Limited, was held at the company's offices, Bristol road, Gloucester, on Monday, July 26th. Sir Richard V. Vassar-Smith, Bart., chairman of the directors, presided, the other members of the board present being Mr Ernest K. Little, C.B.E.,

Mr M. F. Maclean, Lord Bledisloe, K.B.E., Sir F. Colchester-Wemyss, K.B.E., and Mr John Macgregor, C.B.E. (managing director), with the general manager (Mr A. Glyn Watkins) and the secretary (Mr J. H. Beach). An apology for unavoidable absence was received from Mr E. L. Evan-Thomas (one of the directors).

10 PER CENT. DIVIDEND AND 5 PER CENT. BONUS.

In their report the directors stated that the profit on the year's trading (ending May 31st last), after making the usual provision for depreciation, and carrying £100,000 to reserve, was £92,565 6s 11d, and the disposable balance, after deducting the interim dividend paid February 1st last, amounted to £117,617 10s 7d. The directors recommended the payment of a dividend for the past half-year at the rate of 10 per cent. per annum, less income-tax, making 10 per cent. for the year, and a bonus of 5 per cent., free of income-tax, and that the balance of £65,117 10s 7d be carried forward.

10 PER CENT. DIVIDEND AND 5 PER CENT. BONUS.

The Chairman, in moving the adoption of the report and accounts, first of all referred to what he described as an unusual paragraph in the report in reference to the directors having placed £100,000 to reserve before submitting a proposal to that effect to the shareholders. Their rule, he said, had been to show the disposable balance on the profit and loss account, and then to recommend, when they could, an amount to be placed to reserve. The sum in question was part of the surplus of what was realised by the sale of a portion of the assets of the company—namely, wagons let on hire, and the board thought that it properly belonged to the capital account rather than to revenue. Therefore, he hoped the shareholders would agree that the directors did rightly in placing that sum of £100,000 straight away to reserve.

REVENUE ACCOUNT.

Coming to the revenue account, the Chairman pointed out that the directors' remuneration (£2,000) and the auditors' remuneration (£350) were the same as a year ago. The debenture interest was about £2,000 more this time than last (£22,381, against £20,282), the interest being higher as the amount of the debentures was also higher. Depreciation of buildings, machinery, and of wagons let on hire had been carried out at the usual rates, but the total amount on which it had been calculated was less than in the previous year, resulting in £11,746, as compared with £12,362. Then there was the £100,000 already mentioned as having been carried to reserve; and the balance on that side of the account was £92,565, as against £88,943 a year ago. On the other side of the revenue account, wagon rents and balance of profit and loss account, including surplus on sale of wagons, totalled £186,505, against £93,763 in the previous year. The transfer fees were about the same as a year ago (£428 as compared with £421), but they marked a considerable increase over those paid in 1918 (£65), due to larger dealings in the shares now that they were £1 each instead of £7 as formerly. Interest and dividends on investments were a larger figure than a year ago (£42,110, against £29,753); that arose partly from the interest on War Loan being greater during the past year, and also by reason of the fact that there was a fuller interest on the shares in Baldwin's, Limited, which latter were paid up and carried the full dividend for a year instead of a portion of it, as it did in the previous twelve months.

BALANCE-SHEET ITEMS.

With regard to the balance-sheet, the authorised capital was the same as before, £525,000 (525,000 shares of £1 each, fully-paid). The debenture loans showed an increase (£432,200, as compared with £417,350). Sundry creditors and credit balances figured in the account at £427,270, against £390,121. They owed Lloyds Bank, Limited, £278,327, and £80,000 (the latter item being on the special War Loan account), as compared with £32,730 a year ago, and that arose very much from the necessity for more working capital. Now that the ordinary raw material which the company used was costing so much more, and the wages were so much higher, it naturally required more money to carry on the business than it did previously, and they had, as a temporary measure, been obliged to go to the bank for assistance in that respect. The reserve, including the £100,000 already mentioned, was now £310,000, compared with £200,000 a year ago. Dealing with the assets in the balance-sheet, the Chairman pointed out that to the item under the head of land, buildings, machinery, &c. (which on May 31, 1919, appeared at £437,850), there had been additions during the past year, totalling £30,327, and after making the usual allowances for depreciation, the figure was brought down to £284,657, compared with a net amount of £261,185 a year ago. Wagons let on simple hire (less depreciation) and on deferred purchase appeared in the balance-sheet at £249,132, as compared with £242,067 in the previous year. That item required a little explanation. The company had sold on deferred purchase a number of wagons which were let on hire previously, and, of course, until paid for they remained the property of the company, and continued to be included in its assets. The Chairman remarked in passing that higher rentals than formerly had been obtained for the wagons which were let on ordinary hire. Stock-in-trade and work in progress amounted to £719,188, against £411,189 a year ago, the increase being due largely to the enhanced cost of material; and the amount under the head of sundry debtors had increased from £184,924 to £275,809. The company's investments (including £331,551 War Stock) totalled £641,446, as compared with £579,366 (which latter sum included £231,552 War Stock) in the previous year, the increase being due to some extent to the paying up of instalments due on the War Loan.

BALDWIN'S, LIMITED.

With regard to the question of the investments, of course it was a point whether, when they were wanting money for carrying on the business of the company, they should have as much as £641,000 invested. As a matter of fact, some six months ago they intended to sell some of the shares which they held in Baldwin's, Limited, so as to provide more working capital for the Wagon Company. Then there came that bargain with Sperling and Company, under which the directors of Baldwin's, Limited, agreed to sell the share capital to Sperling and Co. at £3 a share, and if this deal had come off the Wagon Company would have made a considerable profit, which would have helped it very much in the future in augmenting the working capital available, and also for the purpose of extensions which might be necessary from time to time. The bargain had not, however, been carried out, and certain litigation was going on on behalf of Sperling and Co. to rescind the contract, and on behalf of the directors of Baldwin's, Limited, and some of the other shareholders, for the fulfilment of the contract. Without going into details, he (the Chairman) might say there were now negotiations in progress with Sperling and Co., under which it was possible that a portion of the bargain, at all events, might be recommended to the shareholders in Baldwin's, Limited, for acceptance.

A PRUDENT POLICY.

In conclusion, the Chairman said he thought the shareholders would agree that the accounts now submitted were satisfactory, both as regarded the dividend and bonus and the amount carried forward. He was very glad that they were able to carry forward so large an amount, because it was a little difficult to see what might happen in the future. The whole world was full of unrest, although he thought it might be claimed for this country that it was better off than any other. Still, they had troubles looming ahead, it was impossible for anyone to foresee what might be the result of the difficulties which lay ahead, and it was a prudent policy to make provision for the future by adding so substantially to the reserve, in addition to carrying forward the amount recommended.

Mr Ernest K. Little seconded the Chairman's proposition, which was unanimously adopted.

Messrs E. L. Evan-Thomas and E. K. Little were re-elected directors, and the auditors (Messrs Hudson, Smith, Briggs and Co., chartered accountants, Bristol) were also re-appointed.

The Chairman, in acknowledging tributes paid to the directors by Mr Alfred Slater and Mr Alfred A. Bourne, added an expression of appreciation of the loyal and efficient services of the managing director, general manager, secretary, and all the members of the staff.

BRITISH STEAMSHIP INVESTMENT TRUST, LIMITED.

SPLENDID RESULTS FOR THE YEAR.

The thirty-third annual general meeting of the British Steamship Investment Trust, Limited, was held, on the 28th instant, at the Cannon street Hotel, London. Mr J. Wilson Potter (the chairman) presided.

The Chairman, in moving the adoption of the report and accounts, said: It is very gratifying to me to submit for your approval the thirty-third report and accounts of the trust, which are certainly the best of the series so far. Your directors have again been able to increase the capital by means of a transfer from the reserve fund. The deferred stock has been doubled in amount and stands at £1,800,000, against £900,000 a year ago. Considerable realisations of shipping property have been made at good prices. The total investment in shipping appears at about £677,000, or an increase of £127,000 arising from some purchases of shares in the most important of the liner companies. The amount invested in tramp tonnage continues to decrease, and is now only about £290,000.

The trust has since its inception been concerned principally with shipping investments, but a considerable change has been effected during recent years, and in view of the uncertain outlook for shipping your directors have not reinvested the proceeds of realisations in shipping, but have looked for more varied sources of revenue, with the result that the trust now holds only £677,000 in shipping as against about 2½ millions in other securities.

I have referred to the uncertain outlook. I think it is very difficult for anyone to forecast what the course of shipping may be in the next few years. The amount ot tonnage built and building now exceeds pre-war figures. Foreign nations have largely increased their holdings in tonnage. It may be that the volume of our trade will be sufficient to support this immense amount of tonnage, or it may be that we have to look forward shortly to a period of stress and competition. One of the features of the case is the tonnage in American hands. This principally belongs not to American nationals, but to the American Government, and for any loss they may make on their shipping they can go to their taxpayers to make it up. British shipping, on the other hand, is entirely held privately.

The income of the year is the exceptional one of £399,033, and your directors are pleased to be able to recommend the payment of a dividend and bonus aggregating 15 per cent. on the deferred stock, which, with the interim dividend and bonus paid in January, makes a total payment equal to 20 per cent. on the present capital of £1,800,000 deferred stock.

Mr W. Holford Dixon seconded the motion, and it was carried unanimously. The formal business was duly transacted.

BRITISH THOMSON-HOUSTON COMPANY, LIMITED.

THE CHANGE OF SHARES.

RECORD AMOUNT OF ORDERS.

The twenty-fifth ordinary general meeting of the British Thomson-Houston Company, Limited, was held, on the 27th instant, at the offices of the company, 83 Cannon street, London, Mr H. C. Levis (the chairman of the company) presiding.

The assistant secretary read the notice convening the meeting.

The Chairman, having read the auditors' report, said: At the ordinary general meeting last year, I stated that the directors were considering the question of new capital required by the constant growth of the company's business and higher manufacturing costs, and that proposals relative thereto would in due course be laid before the shareholders for consideration. Our share capital has been comparatively small, consisting of £400,000 in 4 per cent. cumulative preference shares and £400,000 in ordinary shares.

Our floating debt, mainly due to the General Electric Company of New York—and afterwards to the International General Electric Company of New York—has been large. No dividends have been paid on the preference shares for a number of years, as the directors, after consultation with the holders of a large majority of these shares, considered it best to conserve our resources for the expansion of the company's business.

CHANGE IN THE SHARES.

Under our articles of association any holder of preference shares had the right to require that his holding should be converted into ordinary shares, and if the holders of a certain percentage should so require, then the company could declare all of the remaining outstanding preference shares to be ordinary, so that the conversion should be complete. Recently the necessary percentage made a formal request to the company to make this conversion, and this has been carried into effect; consequently, we have now no preference shares outstanding, but only an issue of £800,000 of ordinary shares.

At an extraordinary general meeting held on July 12th the necessary resolutions were passed, by which each of our £10 shares was divided into ten £1 shares, and the ordinary shares were increased to £2,000,000, consisting of 2,000,000 shares of the denomition of £1 each. The necessary resolutions were also passed creating 2,000,000 preference shares of the denomination of £1 each, bearing cumulative dividends at the rate of 7 per cent. per annum.

These resolutions have been ratified at a confirmatory meeting; so the authorised capital of the company at this time consists of £2,000,000 in ordinary shares and £2,000,000 in 7 per cent. preference shares—all of the denomination of £1 each.

Subject to confirmation at this meeting, it is proposed to issue to the holders of the old preference shares, in full payment of all accumulated dividends and free of further income-tax, ordinary shares of the par value of five guineas for each £10 preference share held; also to issue £40,000 par value of these ordinary shares as a dividend at the rate of 10 per cent., free of further income-tax, to the holders of the old ordinary shares. These dividends—payable out of the reserve account—will absorb £250,000 of ordinary shares. The remaining ordinary shares and all the preference shares will be issued from time to time as may be necessary for the requirements of the company.

Our debt to the International General Electric Company, Inc.—payable in dollars—has been settled by advances in sterling from our bankers. This involved a loss in exchange, which was dealt with in our last year's accounts. The amount due to our bankers will be liquidated in due course by the proceeds of our share issue.

EXTENSION TO WORKS.

During the year we expended, on additions to factories at Rugby, Coventry and Willesden, £184,660, and we wrote off £59,660, leaving the net book value at £950,000, which, having in mind their cost, is a very conservative figure. In September last we entered into an agreement to purchase some factory buildings and land at Blackheath, near Birmingham. Due to various difficulties that arose in connection with titles we were unable to take possession until June this year. The floor space at present available in the buildings acquired is about 250,000 square feet and the area of the land is over 70 acres. Manufacturing operations will commence as soon as possible. As stated in our report, plans are in hand for further extensions at these works. Considerable additions are being made to our factory at Rugby which will greatly accelerate and increase the output of turbines, large motors and generators, also incandescent lamps. Negotiations have been completed for a considerable area of land in another part of the country, where it is proposed, among other things, to erect a lamp factory, as the facilities at Rugby for the manufacture of lamps cannot advantageously be extended much beyond their present limits.

PROFIT AND LOSS.

Turning to the profit and loss statement, it will be observed that the profits for the year, after deducting all expenses and charges other than interest on debentures and loans, and after making provision for estimated war taxation for 1919, were £412,399, which I think may be considered very satisfactory, particularly as the ascertained loss in exchange to December 31st had been deducted. To this is to be added the amount brought forward from the last financial year, £150,862, making the total amount to deal with £563,262. From this is to be deducted interest on debentures and loans, £134,230; there has been carried to the capital reserve account £6,217; the plant account has been depreciated by £59,660, and £154,723 was set aside to take care of a further possible loss in exchange, leaving to be carried to the balance-sheet the sum of £208,430. This amount is subject to adjustment of the reserves made for munitions levy and excess profits duty for 1917, 1918, and 1919, which adjustments have not yet been finally made.

In view of the fact that the accumulated dividends on the old preference shares will be paid up by the issue of new ordinary shares and that the old ordinary shares are now receiving a dividend of 10 per cent.—likewise payable in new ordinary shares—we have not recommended to the shareholders that any further distribution be made at present. It is hoped that the company can next year resume the payment of dividends on a satisfactory basis.

DEMANDS FOR COMPANY'S GOODS.

The large electric steel-rolling mill equipments, to which I referred last year, have now been in commercial operation for several months, and their performance has been in every way up to our expectations, and has given entire satisfaction to the purchasers. These are among the largest equipments for this class of work which have ever been built here or elsewhere. Last year I stated that, judging from the inquiries which we received after the signing of the Armistice, there was an enormous amount of business in sight; the volume of orders placed with us since then justifies this statement. The orders we received for the first six months of this year are larger than those for the corresponding period of 1919, though 1919 was a record year, and the volume of orders on hand at this time is the largest in the history of the company.

One of the greatest hindrances to our output has been the shortage of castings occasioned by the moulders' strike in the latter part of last year. All branches of engineering have been, and are still, embarrassed by this shortage, and it seems almost impossible to make up for the time lost. It has seriously interfered with our output, in spite of the great efforts we have made to overcome the difficulty.

AGREEMENT WITH INTERNATIONAL GENERAL ELECTRIC COMPANY.

As stated in the report, we have made a contract with the International General Electric Company, Incorporated, of New York, which takes the place of the one previously existing between the General Electric Company of New York and ourselves. This substantially increases the possibilities of the company's business, and is a very valuable asset, having in mind the fact that it confers on us for our territory the patent rights of all the inventions of the General Electric Company of New York, as well as the benefit of its research laboratories, which are undoubtedly the leading electrical research laboratories in the world to-day.

So that we may keep in close contact with business on the Continent of Europe, we have taken a financial interest in the Compagnie Francaise pour l'Exploitation des Procedes Thomson-Houston and the Societe d'Electricite et de Mecanique (Procedes Thomson-Houston and Carels) of Belgium, and, as stated in the report, several of our directors are on the boards of these two companies. This is an important connection, and we expect it will be of material benefit to the company in various directions.

RELATIONS WITH EMPLOYEES.

I do not think it is fully realised how much is done by many

manufacturing companies for the benefit of their employees. Most companies give a good deal of attention to such matters, and this company is no exception to the rule. We have established canteens on a large scale, where good food is supplied at very reasonable prices and under attractive conditions. At Rugby we have purchased a large tract of land, which will be devoted to sports and recreation, and it is our intention in due course to provide similar facilities at other points where we have manufacturing establishments. We also encourage and assist various movements, such as welfare clubs, boy scouts, bands, &c., and particular attention is given to education. Our booklet giving particulars of the company's educational arrangements has attracted much favourable comment, not only here but also abroad. The company has recently established two scholarships, under which two young men will be sent every year to America, free of expense for a year's training in engineering, manufacturing, and commercial work. It is felt that not only will this be a valuable experience to young men who, we expect, will remain in the service of the company, but that it will also be a factor—even though small—in maintaining and developing good relationship between the two countries.

E.P.D.

One of the serious difficulties confronting a great many companies to-day is the excess profits duty, which is unfair both in theory and in practice, in that it penalises most those who are the most progressive. If two companies are making the same amount of profit, and one happens to have a good pre-war standard, that one pays little or no excess profits duty, whereas the other, whose business has increased, has to pay heavily. It was equitable that those companies whose business increased during the war should not profit unduly during that period by reason of such increase, but the business which is being done to-day has nothing to do with the war, and should not be subject to these special war conditions. The only fair tax is one that applies equally to all. It is particularly hard on a progressive company, because progress in itself involves the tying up of capital, while this unfair tax absorbs the greater part of the return from that capital, and thereby actually chills the incentive to progress. Consequently, when new capital is required, it is difficult to obtain it under such conditions.

TRIBUTE TO THE STAFF.

Before closing, it is a great pleasure to be able to state that during the year under review, notwithstanding the many difficulties which have been encountered, the members of our staff have worked hard and loyally. I also take this opportunity to say that we have done all that is possible in the way of reinstating ex-service men, who were formerly in our employ, and, as I have heretofore stated, the company made very substantial contributions towards the maintenance of the families of the men who had joined the Colours.

I now beg to move :—"That the report of the directors produced, together with the annexed statement of the company's accounts at December 31, 1919, duly audited, be now received, approved, and adopted."

The Right Hon. Lord Carmichael seconded the resolution, which was carried unanimously.

On the motion of the Chairman, seconded by Mr A. R. Monks, Messrs C. A. Coffin, E. W. Rice, and Lord Carmichael, the retiring directors, and Messrs Gerard Swope and Walter C. Fish, who had been appointed directors since the last annual general meeting, were re-elected directors of the company.

On the motion of Mr Monks, Messrs Price, Waterhouse and Co., the retiring auditors, were re-elected at the remuneration of £525 per annum and out-of-pocket expenses.

A vote of thanks to the chairman concluded the proceedings.

EDWARD LLOYD, LIMITED.

SATISFACTORY RESULTS.

INCREASE OF CAPITAL.

CAPITALISATION OF RESERVES.

The thirtieth ordinary general meeting of Edward Lloyd, Limited, was held, on the 27th instant, at the head office of the company, 4-7 Salisbury court, Fleet street, London, Mr Frank Lloyd (chairman and governing director of the company) presiding.

DIRECTORS' REPORT.

The report of the directors for the year ended December 31, 1919, states that :—

	£ s d	£ s d
The profits for the year, after allowing for depreciation and making provision for bad and doubtful debts, estimated excess profits duty, income-tax and contingencies, amount to	223,032 11 11	
Making with the balance brought forward from the previous year	52,690 4 11	
A total of		275,722 16 10
Deducting—		
Interest on pension account, directors' and auditors' fees, head office and transfer office expenses		5,121 0 10
		270,601 16 0
Dividend on the preference shares for the year to December 31, 1919	£37,125 0 0	
Amount carried to reserve as per Article 126 of Articles of Association	20,000 0 0	
		57,125 0 0
Leaving as per balance-sheet		213,476 16 0
Deducting interim dividend on the ordinary shares at the rate of one shilling per share (free of income-tax), paid January 26, 1920		30,000 0 0
There remains a balance of		183,476 16 0
The directors now recommend the declaration of a final dividend for the year on the ordinary shares at the rate of one shilling and ninepence per share (free of income-tax), making 13¾ per cent. for the year	£52,500 0 0	
Carrying forward to the next account	130,976 16 0	
		183,476 16 0

The profits for the year show an increase of £45,091 18s 7d over 1918, after making provision for income-tax, which has hitherto been included in company expenses.

CHAIRMAN'S SPEECH.

The secretary (Mr Robert B. Miller) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said :—You will have seen in the report, which has been in your hands for some days, that the profits for the year show an increase of £45,091 18s 7d, as compared with 1918, after making provision for income-tax, hitherto included in company expenses.

Your directors congratulate you on the improved results, and recommend a dividend of 13¾ per cent. on the ordinary shares, carrying forward £130,976 16s, as against £52,690 4s 11d brought in. This will bring the average distribution since the outbreak of war up to 9⅓ per cent. on the nominal capital of £600,000. If however, the real capital employed in the business be taken into account, the average return over the last six years only works out at about 7⅛ per cent. Larger dividends could have been paid, but it has been our policy since the formation of the company to strengthen the business and provide the necessary funds for further expansion by the setting aside of ample reserves and by a very conservative policy in the distribution of dividends.

If the directors' recommendations as to appropriation of profits be approved, the company will then have reserves and undivided profits to the amount of more than £680,000, and the directors intend in September to convene the necessary meetings of the shareholders to approve of the increase of the capital and the capitalisation of £600,000 of these reserves in the form of new ordinary shares, which will give each ordinary shareholder one new ordinary share in respect of each share now held.

PREFERENCE DIVIDEND PROPOSAL.

At the same time the directors will recommend the ordinary shareholders to agree to the increase of the dividend payable on the preference shares from 5½ per cent. per annum, the present rate, to 7 per cent., such increase to take effect as from June 30, 1920, so that the instalment of dividend payable on April 1, 1921, in respect of the half-year ending December 31, 1920, would be paid at the increased rate. In consideration of this increase in their dividend the preference shareholders will be asked to agree to an alteration in the articles of association which will leave it to the discretion of the board to determine the amount of the profits that is to be carried to reserve in each year, and they will also be asked to agree to the issue of additional preference shares ranking *pari passu* with the existing preference shares, provided that the total amount of the preference shares at any one time issued does not exceed the nominal amount of the ordinary shares for the time being issued. At the present moment the amount of the preference shares slightly exceeds the amount of the ordinary shares, but the directors feel satisfied that, inasmuch as goodwill does not figure in the balance-sheet as an asset at all, the capital position of the preference shareholders will be amply protected provided that the amount of those shares outstanding does not exceed the amount of the ordinary shares.

REASONS FOR THE PROPOSAL.

The object of the directors in making these proposals is twofold. At present the company has employed in its business in the

form of reserves and undivided profits a sum of money, considerably exceeding the total amount of the ordinary share capital, on which no dividends or interest have to be paid. These reserves and undivided profits represent accumulations of profits which the ordinary shareholders have left in the business instead of distributing them in dividend. As a result of the use of this large sum of money in the business on these terms, the profits available for dividend on the ordinary shares appear to be very large because they are only distributed over one-half of the actual capital which is used to earn them.

By the capitalisation of £600,000 of these profits the ordinary share capital will be brought into much closer relation with the actual capital now employed in the business, and consequently the profits earned will show a more accurate relation to the capital used to earn them.

The other object which the directors have in view is by increasing the preference dividend to secure for the preference shareholders a fair return on the money which they have invested in the business and at the same time to secure for the company reasonable freedom for expansion in the future.

POSSIBLE NEED FOR MORE CAPITAL.

A business such as ours cannot stand still and, in view of the great increase in working capital required and to the largely increased cost of new buildings and machinery, the directors foresee that it may not be possible in the future as in the past to provide wholly for the requisite expansion out of the undivided profits, and that it may be necessary to raise additional capital. While the directors have no immediate intention of making an issue of additional capital, they think it only prudent to take this opportunity of securing the necessary power so that, if occasion should arise, they may be able to take advantage of any opportunity that occurs without the delay incident to meetings of shareholders and arrangements as between the different classes. I need scarcely add that should a further issue of preference shares have to be made it would be the policy of the directors to afford to the existing shareholders an opportunity of participating in such issue.

INCREASED PRODUCTION.

As regards the working of the past year, production of pulp in Norway and paper at Sittingbourne both showed a remarkable expansion. Owing to the adoption of the three-shift system in August, a sensible slowing down in the growth of production was experienced, with a gradual improvement during the remaining months of the year. The current year will show a still greater improvement, the pre-war standard of production having now been passed, with the prospect of further improvement in the future. The change over to the three-shift system was a serious handicap to production for the time being, but, thanks to the determination of the men, all difficulties have been overcome—a result I ventured to predict at our last annual meeting.

I am anxious to avail myself of this opportunity to acknowledge cordially the admirable services rendered by the staff and employees during a year of great difficulties—greater perhaps than at any period during the war—and to assure them of the directors' warm appreciation of their successful efforts.

Mr Harry Lloyd seconded the motion, which was unanimously adopted, and a final dividend of 1s 9d per share (free of income-tax) was declared on the ordinary shares, making, with the interim dividend already paid, 13¾ per cent. for the year.

The retiring directors, Mr Harry Lloyd and Mr E. H. Raynham, were re-elected, and Messrs Turquand, Youngs and Co. were re-appointed auditors.

The meeting concluded with a vote of thanks to the chairman, directors and staff.

NEW EGYPTIAN COMPANY, LIMITED.

TRANSFER OF CONTROL TO EGYPT.

An extraordinary general meeting of this company was held, on the 28th instant, at Winchester House, Old Broad street, London, E.C., to consider resolutions to transfer the control of the company to Egypt, and to make the necessary alterations in the articles of association. Mr A. A. Baumann, chairman of the company, presided.

The Chairman said: Gentlemen,—At the last general meeting of the shareholders in June I told you that we had received a requisition from the Egyptian shareholders for the transfer of the control of the company to Egypt. The number of shares held in Egypt cannot be accurately ascertained, for the simple reason that we are almost entirely a bearer-warrant company, but we can judge approximately from the payment of the dividend. There can be no doubt that something like half the capital is now held in Egypt, the buying from Egypt during the last twelve months having been continuous and large. That being so, it was, of course, inevitable that some such alteration should be made. It is only natural that people resident in Egypt should object to paying income-tax, excess profits duty, and corporation tax in this country, and that they should seek to alter that by transferring the control to their own country. According to the decision in the Egyptian Hotels Company, I think it can now be taken as settled law, if there be such a thing, that if the control and management is wholly outside the kingdom, then the company is not liable to be taxed either for income-tax or excess profits duty.

Of course, the shareholders resident in England will have to pay their income-tax when their dividends are remitted from Egypt, but the shareholders in Egypt will get off the domestic English taxation altogether.

ADVANTAGES FOR ENGLISH SHAREHOLDERS.

With regard to the English shareholders, who are certainly half, if not more than half, of the total number, they will have the advantage of getting off the excess profits duty, and that is a very considerable advantage, and ought to increase their dividends and the value of their shares. Therefore, considering, as the London board was bound to do, the interests of both the Egyptian and the English shareholders, we thought that the exemption from the excess profits duty was a sufficiently strong advantage to induce us to part with the control of the finance and policy of the company. I do not conceal from you for a moment that I think it is a drawback. I think it is a thing that most large English shareholders would dislike—namely, the parting with the control over the company—but, weighing one thing against the other, I think the balance of advantage is in favour of adopting the scheme.

The result of the resolutions which the secretary has just read out to you will be to give effect to the request of the Egyptian shareholders. The London board will cease to exist, and the Egyptian directors remaining will then become the sole board, and presumably they will elect some more directors—let us hope not too many—to manage the company's affairs in Egypt. We used to have a board of seven, but that was necessary because there were two boards, one in Alexandria and one in London; but now there is only going to be one board in Egypt. We may hope, and, I think, trust to the discretion of the remaining directors, that they will not in future exceed the number of five, because, in my opinion, a board of five directors is quite sufficient.

THE QUESTION OF A LONDON COMMITTEE.

I think, also, it is quite certain that the Egyptian directors, when they get back to Egypt, will consider the question of appointing a London committee to watch over the interests of the large English shareholders. The South African companies have alternate directors in this country, which we could not very well have, because it would defeat the object of our resolution, which is to escape excess profits duty, but we might well have a small London committee, which would communicate with the English shareholders and keep them informed of what is going on. I think that is the more necessary in the case of this company from the fact that it has no large financial firm or house to represent its interests on the London market. I am quite aware that it is part of the scheme that Mr Day, the secretary, should be appointed agent and secretary. Still, with all respect to Mr Day, I do not think his existence as secretary is quite enough. I repeat my hope that the new board in Egypt will consider at their first opportunity the desirability of appointing a London committee.

The three necessary resolutions were then successively put by the chairman, seconded, and carried unanimously and without comment.

The Chairman, when replying to a vote of thanks to the board, said the latest figures from the other side showed a very large increase in the sale of land, even since the last meeting in June. From January 1st to May 31st deeds had been signed for 1,416 feddans for £286,380, or £202 3s 9d per feddan, and the profit on these sales would come into the present year's accounts.

ANGLO-JAVA RUBBER AND PRODUCE COMPANY, LIMITED.

COST OF PRODUCTION LOWERED CONSIDERABLY.

The tenth ordinary general meeting of this company was held, on the 27th instant, at Winchester House, Old Broad street, London, Mr R. F. McNair Scott (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: In the balance-sheet you will notice that the issued share capital is increased from £293,335 to £344,170, and, the new shares having been issued at a premium, there appears in your accounts a share premium account amounting to £63,432. It is hoped that the debentures outstanding will be paid off during the next two years. In accordance with the proposals foreshadowed at the last annual meeting, the estate in Sumatra has been sold. In future it will be represented in the accounts by the 33,765 shares of £1 each fully-paid in the United Rubber and Coffee Plantations, Limited, a company registered in the United Kingdom with an issued capital of £260,000. The total revenue receipts amount to £232,151, against £113,500 for the previous year. The rubber sales for the year give an average price over all grades of 1s 10.10d per lb f.o.b., or approximately 2s o½d per lb, landed terms. The f.o.b. cost of production, which includes managers' bonuses and £7,176 allowance for depreciation, is 11.34d per lb, and, as compared with the previous year, is lower by nearly 3d per lb.

The estimated output for the current year is 2,333,000 lbs, and for the first half of the year 1,277,300 lbs have been harvested. Some disappointment may be felt that the estimate for the current year is lower than the output for 1919. Those of you who have been long interested in rubber companies will have noticed that views as to tapping are becoming more and more conservative. In future years shareholders will reap the benefit of prudence and restraint now. The net profit for the year, after allowing for depreciation, was £95,189. Adding the amount brought forward from last year, there is a total of £134,358, and there remains a balance of £92,749, out of which your directors recommend the payment of a final dividend of 10 per cent., less tax, making a total of 17½ per cent. for the year ended December 31, 1919, which, if passed, leaves to be carried forward £58,332, against £39,168 in the previous year.

We have just been able to secure a valuable estate, which has the great advantage of being quite close to two of the old sections. It has an area of about 1,800 acres, and it increases our total area to over 14,000 acres.

The motion was carried unanimously, and a resolution was passed increasing the remuneration of the directors.

THRELFALL'S BREWERY COMPANY, LIMITED.

BOARD'S CAPITALISATION SCHEME APPROVED.

The thirty-third annual general meeting of Threlfall's Brewery Company, Limited, was held, on the 28th instant, at the Cannon street Hotel, London, Major C. M. Threlfall (the chairman) presiding.

The Secretary (Mr F. Cornwall) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Before going through the accounts of the company for the year ending June 30, 1920, I regret to have to inform you that my father, our late chairman, Mr Charles Threlfall, has been compelled to sever his connection with the company through ill-health, after having had the honour of being a member of the board since the formation, that is for the last 32 years. Owing to the keen attention which must be paid to a business like ours in these strenuous times when reconstruction is taking place everywhere, together with the unforeseen difficulties of the future, he felt that his health would not allow him to do justice to the shareholders by remaining on the board.

We are fortunate, however, in having been able to secure as a director Mr W. G. West.

Proceeding to deal with the report and accounts, he said that since the last meeting they had bought a number of licensed houses, the chief purchases being 21 houses in the Wigan area and 15 in the Chester district. Other properties had been acquired in the Liverpool and Manchester districts. The accounts showed that £20,000 had been placed to the employees' superannuation fund, making a total of £72,110. The directors had also recognised the services of the employees by distributing a bonus of £20,000 amongst them. The net profit was £263,982, showing an increase of £42,337.

BOARD'S NEW CAPITAL PROPOSALS.

A circular had been distributed explaining the board's proposals as to the distribution of reserve and the issue of new shares. The share capital and reserve together amounted to £1,387,500, and it was on that amount of capital invested in the business that the profits were earned. The company had always had prudent directors, whose policy it had been to put aside profits to a reserve account, thus supplying the means to enable the business to expand into the flourishing concern which they saw that day, the properties of which were valued at double the amount standing in the balance-sheet and which returned 30 per cent. per annum on its ordinary shares. In equity the reserve belonged to the ordinary shareholders, but the articles entitled the preference shareholders to share equally with the ordinary shareholders in the distribution of the reserve. The proposal was to distribute it by a payment of 10s per share, the payment to the preference shareholders being in cash and to the ordinary shareholders being in scrip, the ordinary shareholders having also the opportunity of subscribing for new ordinary shares at a price which must be considered cheap in view of dividend prospects.

The proceeds of the new 500,000 ordinary shares to be issued at 25s per share would be utilised by taking advantage of offers of good licensed properties, whilst more working capital was necessary than before the war to cover the increased values of stock and the increase in working expenses.

The report and accounts were adopted, the formal business was transacted, and at a subsequent extraordinary general meeting resolutions increasing the capital to £2,000,000 and authorising the capitalisation of reserves were adopted.

CROWN MINES, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

The twenty-fourth ordinary general meeting of shareholders was held in Johannesburg on June 16, 1920.

The Chairman (Mr Samuel Evans) said: Gentlemen,—You will observe that, compared with 1918, there is an increase of 150,489 in the tons mined, of 32,678 in the number of fine ounces of gold recovered, and of £188,021 in the amount distributed in dividends. The working costs are up by £123,663, or 4d per ton milled, whilst the yield per ton in dwts shows a slight improvement The working profit totalled £750,422 11s 6d, or 7s 8d per ton milled. Of the working profit for last year, £286,308 19s 1d, or 2s 11d per ton, was derived from the premium on the sale of our gold. The gold premium renders it necessary to deal with the year's results somewhat differently to what I have been accustomed to do in the past. Until recently the yield and the costs per ton were the controlling factors. Now the price of gold per fine ounce in South African and British currencies has also become a matter of cardinal importance. Our output last year was :—Gold : 639,303 fine ounces, equal at par value, £4.24773 per fine ounce, to £2,715,586 10s 8d; net premium on sale of gold, £286,308 19s 1d. Silver : 67,915 fine ounces, which were estimated to realise £18,807 10s 8d, or an average of 66.4d per fine ounce; making the total revenue derived from the disposal of the year's output of gold and silver, £3,020,703 0s 5d; to which has to be added—Adjustment on gold produced in previous years, but realised and credited to working revenue during 1919, £20,682 4s 3d; net revenue obtained from clean-up of old mill sites at Bonanza and Crown Reef, £2,039 5s 7d; amount received under Bewaarplaatsen Moneys Application Act, 1917, £22,035 6s 10d; freehold and sundry revenue, £4,908 19s 11d; forfeited dividends, £1,596 5s 5d; sundry interest received, £5,118 15s 3d—£56,380 17s 3d, bringing the total revenue from all sources up to £3,077,083 17s 8d. The expenditure for the year was :—Working costs at the mine and general expenses at the head and London offices, £2,241,781 6s 10d. Other disbursements—Debenture interest, £27,158 13s 4d; redemption of debentures, £84,700; premium on purchase of debentures, £486 8s 9d; annuity in respect of undermining rights, £29,905; capital expenditure, £90,895 12s 10d; taxation, £106,704 17s 9d; contributions to war relief funds, donations, &c., £12,221 5s 9d; depreciation of investments, £1,200; realisation charges, £40,316 6s 11d; making the total disbursements £2,635,369 12s 2d; and leaving a balance of £441,714 5s 6d; deducting dividends paid, £376,042 8s, we have left £65,671 17s 6d; adding the amount unappropriated at the end of 1918, £348,696 15s 3d, there is therefore carried forward to the present year £414,368 12s 9d; the figure in the printed report is £403,464 7s 9d, leaving a difference of £10,904 5s, which is accounted for thus :—At the time the reports were compiled the exact amount to be received on account of the silver produced during the year was not known. We estimated the probable receipts from that source, and it now appears that that estimate was too low by the amount mentioned, £10,904 5s, which has been placed to the credit of the gold realisation suspense account. As you will gather from the directors' report of the balance brought forward, £135,376 14s 9d is in cash and easily realisable investments, and the remainder in stores, sundry debtors and shares and interests in co-operative and other concerns.

The revenue, including premium, is greater this year than in any of the previous periods excepting 1913. The net premium on the gold produced during the past five months is estimated to total £291,804, equal to 21s 1.1d per fine ounce, or about 7s less than the increase in costs per fine ounce since 1913. The total profit, including premium, shows a decrease of 45 per cent. compared with 1913, although it is better than that of any previous year since 1916. The working costs are now considerably higher than they have ever been before, due almost entirely to increases under the headings white wages, stores, and other costs. Head office and London expenses are less this year than in previous years, whilst there is an increase of about 7 per cent. in the expenditure on coloured wages as compared with 1913. This year white wages amounted to £341,686. This includes £13,250, payment on account of 1919 as the result of a retrospective increase effected in February last. The actual expenditure on white wages for work done this year was therefore £328,435, which shows an increase of 69.1 per cent. on the 1915 figure, when 103,000 tons more were milled. The average monthly earnings of our European workers have gone up from £24 6s 10d per month to £40 1s 7d, an increase of 64.6 per cent. As compared with the first five months of 1915 the total cost of stores shows an increase this year of 33.4 per cent.

As I pointed out last year, our working costs are dependent largely on the prices of commodities and the cost of living, which, in turn, are regulated by the currency policies of our own and other Governments. I then referred to the conditions adverse to gold mining arising out of the substitution of paper for gold in the currencies of many of the countries of the world, and showed that, measured in commodities, gold in England had depreciated over 50 per cent. since July, 1914. There has been a further depreciation of some importance since, but that has been compensated for in a measure by the premium which we have been receiving on all gold shipped after July 25th last. The importance of this matter to gold mining companies can hardly be exaggerated. What we have to realise is that the rise in prices, or, in other words, the fall in the commodity value of gold, is due almost entirely to the replacement of gold by paper for currency purposes, and to the embargoes on the free movement of gold which have been necessitated by the war paper currency policies adopted in England and other countries. On the basis of the index numbers of the Board of Trade, the *Economist,* and the *Statist,* it appears that the purchasing power of gold in England has diminished to about two-fifths of what what it was in 1896, and to rather less than one-half of what it was in 1914. The purchasing power of gold in South Africa has not diminished in the same ratio as in England. We started at a different level, as in 1896 prices, rents, and the wages of Europeans here were very high when compared with those prevailing in England at that time. This consideration also applies to a lesser extent to the comparison with the position in 1914. Moreover, the prices of commodities and services here have not moved upward at the same speed as in England owing to increases in local production and the limited needs of Kaffir labourers. However, taking everything into consideration, it is probably not an exaggeration to conclude that had the commodity value of gold remained stable since 1896 the mining companies here would have been working to-day at a cost averaging something well under 12s per ton, as compared with 22s 9d last year and a much higher figure now. I need not enlarge on what that would have meant for the inhabitants of the Witwatersrand and of South Africa.

Last year I ventured to take a somewhat hopeful view of the immediate future, because there was then a consensus of opinion among authorities in England in favour of the early restoration of an effective gold standard. Unfortunately, owing perhaps to the unwillingness of politicians to depart from the line of least resistance, little has been done since June last year to bring England back to sound money. It is true that an effort is being made to keep paper money within bounds in England, as the circulation of Treasury currency notes not covered by gold or Bank of England notes totalled £307,354,000 at the beginning of last month, as compared with £313,810,000 in June last year. That that effort is not enough, and that English paper money is still redundant, is proved by the fact that in the twelve months ended April last there was an increase of over 30 per cent. in the general level of commodity prices. Notwithstanding the example of England and the fact that all the experts agree that if paper money is multiplied more quickly than production is increased prices will go up, the South African banks have been issuing paper money at an accelerating pace. At the time the war commenced the banks had £2,150,000 of notes in circulation in South Africa. During the war they issued an additional £4,000,000 of notes, and since the Armistice they have further added about £3,500,000 to the paper circulation of South Africa. It would be difficult to conceive a more mischievous policy as far as the permanent welfare of the people of South Africa and their industries is concerned. In my opinion, the banks are sowing the seed of much future trouble. It will take many years to repair the injury which is being done. I am afraid that the dangerous character of the action of the banks in this matter is not at all appreciated by the Government and the Parliament of the Union. Instead of taking prompt and effective steps to make an end as quickly as is safely possible to what Dr Vissering, of the Netherlands Bank, describes as "the senseless creation of artificial buying power," it appears from the debates that have recently taken place in the House of Assembly that serious consideration is being given to measures which, if adopted, will almost certainly have the effect of further disordering our currency and plunging South Africa deeper into the paper money bog.

In the first place it appears that it is proposed, as a temporary measure, to provide for the creation of a new kind of paper money, a Government paper money, fully backed by gold, to be called gold certificates, which will be legal tender and inconvertible so long as there is a premium on gold for export purposes. As I understand the proposal, gold certificates will supplement but not necessarily supplant the existing note circulation. It is a measure to relieve the banks of the obligation to supply gold in exchange for their notes, so that anyone applying to them to pay gold for notes can be given gold certificates instead. As gold certificates will have no additional value outside South Africa, the banks will be saved the loss of the premium on the gold which they have to import to replace that which is at present smuggled out of the country, and consequently when gold certificates are available the banks will have less to fear from increases in their own note circulation. It is indeed obvious that such an arrangement will tend to encourage further inflation unless it is accompanied by provisions which will make it to the interests of the banks not only to stop issuing more notes, but also to make every effort

to bring about a reduction of the existing circulation of paper money.

South Africa has reached a critical stage in this discussion; we are on the verge of a precipice, and there is, I fear, a real danger that, in order to give purely temporary relief to the banks, the wool, and other industries, the Government and the Parliament of the Union may adopt a course which must terminate disastrously, however promising it may appear now. It is greatly to be regretted that South Africa ever adopted paper money. Had this country at the outbreak of war been using metallic money only, and had we, as California did during the Civil War, refused to have anything whatever to do with paper money, it is certain that we should have enormously benefited ourselves and would have been of far greater real help to the Empire. Although the immediate outlook in South Africa is menacing, on the whole I am disposed to take a more optimistic view of gold mining than is usually held in these days. Many people, even among leading economists, believe that paper money has come to stay; that in future gold will be held mainly in the reserves of banks, that less of it will be required, and that as a result its value measured in commodities will remain at a permanently lower level than that of 1914. The Committee on Currency and Foreign Exchanges, over which the late Lord Cunliffe presided, stated in their first interim report that they did not "contemplate a resumption of the internal circulation of gold in England." Sooner or later in Russia, and possibly in other countries, pretty much the same thing will happen as happened to France after the French Revolution. No doubt in a great many instances specie payments will be resumed, with a much smaller quantity of gold in the standard coins, as was done in Austria-Hungary in 1892 and in Russia in 1894, but on the whole and in the long run that will be helpful and not harmful to the gold mining industry. The experience of France whilst Napoleon was in power justifies the conclusion that the countries who first completely abandon paper money and return to specie payments will also be the first to recover prosperity, and that their good fortune will force others to do likewise.

The consulting engineer and general manager deal fully with the development accomplished in the course of the year under review. There are, however, a few points regarding which I may usefully supplement the information which they give. The 19th Level Main Haulage has been started with electric storage locomotives, and ore is being drawn from stopes which have been recently opened up between the 16th and 19th levels in the eastern section. A considerable portion of the track in the western section has been laid, and we hope shortly to be stoping the rich ore exposed in the lower levels in that section. The sinking of Shaft No. 15 has been finished, and the crosscut to connect it with the 19th level south is being pushed ahead. The sinking of Shaft No. 5A is also now completed; it is being equipped with rail guides, and we expect to start development from it in about three months' time. The next point to which I propose to direct your attention is that of the position of our ore reserves, which I think under the circumstances I am justified in describing as distinctly encouraging. As you will note, the consulting engineer reports that considerable progress was made during the year with the development in new areas, and that the reef disclosures on the whole were satisfactory. The main reef leader was consistently payable and of good value; the south reef was more patchy with, however, encouraging values in the lower levels west of No. 7 shaft. At the end of last year we had in reserve 8,451,334 tons of ore estimated to contain 6.31 dwts of gold over a stoping width of 63.2 inches, distributed thus :—

	Tons.	Width. Inches.	Value. dwts.
Above the 16th level.....	6,625,652	64.0	6.04
Below the 16th level.....	1,825,682	60.7	7.26

There was a slight fall last year in the tonnage and in the grade of the ore exposed in the Eastern Section, but, on the other hand, there was an all-round improvement in the exposure in the Western Section, as will be seen from the following comparison :—

	Ore developed in the Western Section on December 31st, 1918.	1919.
Tonnage	4,472,008	4,659,534
Width, inches	61.3	61.1
Value, dwts	6.10	6.28

The most reassuring feature of last year's development operations is the high values obtained in our lower levels in the Western Section. The exposures in this area this year have also been excellent. The main reef leader is consistently payable, but only portions of the South Reef can be worked at a profit under existing conditions. The development accomplished during the first four months of this year in this area is also opening up good ground, as the following figures indicate :—460 feet of main reef leader averaging 694 inch dwts and 380 feet of south reef averaging 265 inch dwts. I may explain that 160 feet on the south reef east averages 344 inch dwts, whilst 230 feet on the main reef leader drive

Every Description of Banking Business.

east averages 1,054 inch dwts, or 17.5 dwts over a stoping width of 60 inches, which compares favourably with the best ground we have had in the past. Generally, I consider that the position of our ore reserve and the promising character of recent development justify shareholders in taking a hopeful view of our future prospects.

The motion was passed unanimously, and the usual formal business terminated the proceedings.

CITY DEEP, LIMITED.

INCREASED PROFITS.

(INCORPORATED IN THE TRANSVAAL.)

The nineteenth ordinary general meeting of shareholders was held in Johannesbury on June 18, 1920.

The Chairman (Mr J. R. Leisk, C.M.G.) said: The shortage of native labour which was remarked upon by my predecessor when he addressed you twelve months ago, continued, during 1919, to occasion considerable embarrassment to the management; and the decrease of some 52,000 tons in the amount of ore crushed was due entirely to the insufficiency of native labour on the mine. I am happy to say that since the beginning of the current year there has been a marked improvement in the supply of native labourers which it is hoped will be maintained. The mine, in common with almost all other industrial enterprises throughout the world, had to provide for a substantial increase in working expenditure. According to the statements now before you this additional cost, on balance, amounted for 1919 to no less a sum than £30,000. Expressed in terms of rate per ton, these additional charges occasioned an increase from 24s 8d to 27s 9d in the working costs. Bearing in mind the decrease in tonnage milled—the figures for 1919 and 1918 were 618,000 and 670,000 respectively—it is gratifying to find that the working profits for the year 1919 exceeded those of the preceding twelve months by roughly £10,000. The factor which, notwithstanding these adverse conditions, accounted for this increase of £10,000 was, of course, the premium on gold. Taking gold, for purposes of comparison, at standard price, the yield per ton during 1919, at 38s 3d, was slightly in excess of the yield for the previous year. In point of fact, since the mine started milling, the yield has been unusually consistent. It is true that in the year 1917 the average yield was 39s 6d per ton, but in the chairman's speech two years ago he emphasised the fact that this was a figure somewhat higher than was justified by the ore reserves; and he foreshadowed the return sooner or later to a grade more in keeping with the average value of these reserves. His remarks apply with equal force to-day. It may even be contended, and with considerable force, that a grade of 38s 3d is still slightly higher than is justified by the general conditions of the mine.

DEVELOPMENT WORK.

Turning now to the development footage accomplished during the year 1919, there was, as you will have noticed, a decrease of some 1,500 feet, as compared with the preceding year. This decrease was due, apart from normal fluctuations, to the shortage of native labour already mentioned. The directors are, of course, alive to the fact that on a mine such as the City Deep the development work must be pressed with the utmost vigour, but they do not regard the decrease in footage from 18,780 to 17,267 as of any special significance. Compared with many other mines the City Deep expenditure on development is very high. This is due, as you are aware, to the fact that our principal mining operations are conducted on one narrow and steeply inclined reef—the Main Reef Leader—and in consequence, the amount of costly shaft sinking and other deadweight work is relatively high.

The working profit for the year amounted to £457,686, to which there fell to be added some £5,000, being the balance of sundry receipts over expenses. There was thus carried into the appropriation account a sum of £462,566, which, together with the balance of £214,940 brought forward from the year 1918, and certain minor receipts, gave a total credit in the appropriation account at December 31st last of £677,957. This amount was allocated as follows:—Capital expenditure (less credits), £70,279; taxation, £65,333; dividends No. 14 (10 per cent.) and No. 15 (13¾ per cent.), £296,875; balance unappropriated at December 31, 1919—represented by cash, investments and cash assets (less liabilities), £245,470—£677,957. With practically half of the year 1920 already behind us, the reports and accounts as at December 31st last are apt to be regarded by shareholders as of less immediate interest. What they want to know is the measure of success that has attended our efforts since these reports and accounts were published.

CITY AND SUBURBAN MINE.

On May 1st last the City Deep, Limited—under provisional agreement with the City and Suburban Gold Mining and Estate Company, Limited—took over the working of the City and Suburban Mine. This has involved a fusion of operations to a very considerable extent, and consequently an element of difficulty has been introduced in comparing present day expenditure with the costs of any period prior to May 1st. Taking, however, the results for the period January-April, 1920, we find that the City Deep milled 226,000 tons as compared with 225,000 tons during the preceding period of four months, and with 184,000 tons during the corresponding period of last year. Applying to City Deep profits the same comparison as has just been quoted, we find the following results:—January-April, 1920, £153,117; September-December, 1919, £112,697; January-April, 1919, £100,956. Working costs for the period January to April, 1920, averaged 28s 8d, as compared with 27s 9d for the year 1919. The increase is due almost entirely to higher rates of wages for white and native employees.

The yield per ton of ore milled since the beginning of January last exhibits a fall as compared with 1919, but to this no significance attaches. The fall is due to a curtailment of mining operations in the upper levels, principally in the north-western section, pending construction of the main ore pass, which is already nearly completed.

The conclusions to be drawn, therefore, from the results of the first four months of 1920 are that working costs still show an upward tendency, and that this factor is accentuated by the fall in the gold premium. On the other hand, the native labour position is greatly improved, and there are indications that the improvement will be maintained. If this anticipation prove correct, the effect upon the City Deep output and incidentally upon profits should be very considerable. Development on the whole continues to be quite satisfactory. For the five months ended May 31st last the development footage totalled 6,336 feet, of which the total footage sampled showed an average value of 21.5 dwts. over 17.6 inches. At the end of May the south shaft had been sunk to a depth of 2,085 feet. No difficulties have been encountered in sinking this shaft.

As already mentioned, a provisional agreement has been concluded between this company and the City and Suburban Gold Mining and Estate Company, Limited, for the purchase by us of the whole of the City and Suburban Company's assets with certain minor exceptions. The consideration specified in the agreement, which awaits confirmation by the shareholders of both companies, is 45,000 fully-paid City Deep shares. Your directors are confident that the transaction will prove of benefit to the City Deep.

As regards the dividend for the first half of the current year, your directors have been carefully into the financial position of the company, and they have declared a dividend of 12½ per cent., which compares with 10 per cent. for the corresponding period of last year.

Mr W. Dalrymple seconded the motion, which was carried unanimously.

OHLSSON'S CAPE BREWERIES, LIMITED.

INCREASED PROFIT AND DIVIDEND.

The thirty-first annual ordinary general meeting of Ohlsson's Cape Breweries, Limited, was held, on the 27th inst., at 110 Cannon street, London, Mr Algernon L. Elwes presiding.

The Chairman, in moving the adoption of the report and accounts, said that the result of the year's working enabled the company to show a larger profit than they did a year ago, and also to declare a slightly increased dividend; and he would like to point out, in that connection, that a dividend of 9 per cent., plus tax, was equivalent, in their case, to a dividend of 12 per cent., less tax, or very nearly so. They had again had very high prices of materials to contend with, which, of course, not only increased the cost of production, but meant that a much larger sum than in normal times was required to hold a given quantity of stock—a point which shareholders would appreciate when they compared the figure at which stock-in-trade stood five years ago—namely, £137,961—with that at which it stood in the present accounts—namely, £243,247. He mentioned last year that the Union Government had again increased the excise duty, which was now double what it was in 1914; and they had in South Africa, as here, the growing demands of labour to satisfy. They were therefore compelled again to raise their prices, though the accounts for the past year only benefited thereby to a slight extent.

Since the war they had relied to an increasing extent upon Colonial resources for supplies of barley, and would be only too glad to do so entirely, but climatic conditions were very variable in South Africa, and supplies uncertain in consequence. In the year under review they were not able to obtain sufficient barley in the country, and had to import to a considerable extent. He had been to South Africa with his colleague, Mr W. D. Buxton, and had made a tour of those parts of the Union in which the

company was chiefly interested. Various arrangements they then made, in consultation with the managers, would, he hoped, show to advantage in succeeding years' accounts. They had disposed of the company's offices in Cape Town, and would conduct the entire business in future from the brewery. That would result, they anticipated, in reductions in working costs. He was satisfied, as a result of his visit, that the conduct of their business was in safe hands, and that the beers were good and generally appreciated.

Mr Gerald Buxton seconded the resolution, and it was unanimously adopted.

INTERNATIONAL TEA COMPANY'S STORES, LIMITED.

INCREASED PROFITS.

The twenty-fifth annual general meeting of this company was held at Winchester House, Old Broad street, London, E.C., on the 29th instant, Mr G. A. Tonge (governing director and chairman) presiding.

The secretary (Mr E. Davies) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen,—I hope you will consider the result of our past year's trading a very satisfactory one. I take it that you have all read the balance-sheet and report for the year. The profit—the enhancement of which is entirely due to an increased turnover during the period covered by the accounts—amounts, with the sum of £42,000 brought forward from the last account, to £315,729, and this is amply sufficient to pay the various small sums of directors' and other fees, to place £20,000 to reserve, £20,000 to depreciation, to pay the preference dividends, to pay 12 per cent. on the £850,000 of ordinary capital, and to carry forward £78,927, this latter being subject to corporation tax and excess profits tax.

Turning to the balance-sheet, you will note that the new issue of ordinary shares has brought that capital more into line with the preference, which certainly was desirable, and the issue of £250,000 of preference capital has enabled us more easily to carry the larger stock which at certain periods of the year our business requires. The stock, you will note, amounts to £822,000. Your freehold properties now reach nearly £500,000, and I cannot but feel what a great asset this is, the bulk of them bought years ago, when bricks, mortar, and labour were at a very different price to what they are to-day. It is always difficult to predict what any one year may bring forth, but with the extension of our factories and business generally, I am confident that our profits must in the future, as they always have in the past, trend upwards. In conclusion, might I once more tender the thanks of myself and my colleagues to the entire staff for their continued loyalty and unfailing energy in the discharge of their various duties?

The motion was put to the meeting and carried unanimously.

On the proposition of Mr B. Chase, seconded by Mr W. Frogley, Messrs Deloitte, Plender, Griffiths and Co. were reappointed auditors.

The proceedings then terminated.

MOND NICKEL COMPANY, LIMITED.

INCREASE OF CAPITAL IN THE NEAR FUTURE.

The sixth annual general meeting of the Mond Nickel Company, Limited, was held, on the 28th inst., at the Caxton Hall, Westminster, London, Sir Robert Mond, J.P., chairman of the company, presiding.

The secretary (Mr D. Owen Evans) having read the notice convening the meeting and the report of the auditors,

The Chairman said that the capital now stood at £3,400,000, all of which had been issued, and additional capital would be required for the natural development of the company. Every large industrial concern required at least three times the amount of working capital which it had required before the war. The directors had had under consideration for some time the question of increasing the capital, and they had decided that in the near future they would ask the approval of the shareholders to an increase in the nominal capital of the company, and to make an issue at some time and in such form as would be convenient.

Proceeding to deal with general matters, he said: We know the chaotic condition of trade and industry on the continent of Europe, which is one of the most important markets for all our products. Our customers on the Continent have been afraid to buy freely, and we ourselves in all transactions have had to be very careful to cover ourselves against loss on exchange.

I think, in view of these difficulties, that the result of the past year's trading gives cause for considerable satisfaction, and that the company is in a strong position to face the future. With regard to labour, during the year our relations with our workmen, both here and in Canada, have been satisfactory. You will appreciate that, when we were compelled to close down a portion of our works at Clydach, thus necessitating the discharge of a large number of men, the situation required very careful handling. Now that we are on the up grade again we are gradually engaging more men. During the year we have established a joint work's council at the Clydach works under the Whitley scheme, the membership of which consists of eight representatives of the workpeople elected by ballot, and an equal number of representatives of the company. The duties of this council involve the consideration of the welfare of the workpeople, to investigate grievances among them, to promote a closer understanding between the management and the workpeople and to report on such questions and make recommendations thereon to the directors.

The report and accounts were adopted.

UNION CORPORATION, LIMITED.

INCREASED PROFITS.

The annual general meeting of the Union Corporation, Limited, was held at Johannesburg on June 25th, Mr H. Newhouse presiding.

The Chairman said that the forecast made at the previous annual meeting that the profits would continue to progress had been fulfilled, and the net profit for 1919 was £237,917, as compared with £145,380 for 1918, or an advance of 63 per cent. The directors had placed £50,000 to reserve account, as against £20,000 last year; had paid a dividend of 2s 6d per share, or £175,000, as compared with 1s 6d per share, or £105,000, for 1918, and £58,281 was carried forward, as against £45,364 brought into the accounts. Unfortunately the value to the mines of the gold premium had been greatly impaired by the recent serious rise in working costs.

At the end of last month the Modderfontein Deep Levels Company had crushed during the current year a total of 209,400 tons, the yield obtained from which, taken at the standard price of gold, had averaged 45s 3d per ton crushed, or an advance of 1s 6d per ton over the 1919 average. On the other hand, working costs had averaged 22s for the five months, as against 18s 5d for last year. The working profit for the five months is £243,722, at the standard price of gold, which it is estimated the premium (less realisation charges) and sundry revenue will increase to approximately £335,000. The Geduld Proprietary Mines Company's operations during the first five months of the current year showed but little variation—except that working costs had risen to an average of 23s 6d.

The Coroporation has secured new mining interests in Mexico by options to purchase and denouncements of claims which were of considerable promise, though it was too early yet to judge of their value with accuracy. On completing their examination at the end of April, the American group which, as mentioned in the report, had made a conditional offer for the assets of the La Fe Mining Company, stated that they were not prepared to deal on the terms and basis laid down by the company. Operations by the San Francisco Mines of Mexico had continued on an increasing scale, and with satisfactory profits, having regard to the present small scale of work. With the larger plant the prospective profits, if the company could work without interruption, were very considerable.

The report and accounts were adopted.

TRANSVAAL GOLD MINING ESTATES, LIMITED.

IMPROVED RESULTS—INCREASED DIVIDENDS.

A meeting of shareholders of the Transvaal Gold Mining Estates, Limited, was held, on the 29th instant, at Winchester House, London, Sir Bartle A. Frere, Bart., presiding.

The Chairman expressed regret that Mr Matthew Brown, who was to have taken the chair, was prevented from being present owing to illness. The year, he said had been a very difficult one, but, all things considered, by no means unsatisfactory. They had crushed 190,000 tons of ore—a quantity exceeded only once in the history of the company. Gold was produced to the value of £355,600, at a total cost of £276,700, giving them a working profit of £78,900. To that had to be added general revenue, which, after allowing for debenture interest, amounted to £8,600, giving a total profit of £87,450. That enabled the directors to declare dividends amounting to 11¼ per cent., against 2½ per cent. for the previous year, and 8¾ per cent. for the year before that. They had been able to crush so large a tonnage of ore because of the increase in their labour forces.

After the influenza epidemic there had been a gradual improvement until towards the end of the year. The ore crushed was slightly less rich in gold than that treated during the previous twelve months, the yield, at the standard price of gold, falling by 6d per ton. On the other hand, the working costs fell by 1s 6d per ton. The net result, still calculating on the standard price of gold, was an increase of 1s per ton in the mine working profit, which amounted to £55,882. The estimate of the effect of freeing the market for gold which he made last year had been far exceeded, the actual revenue from the gold premium being £55,318, or just about equal to the mine working profit. Only £4,000 of the debenture debt was now outstanding.

Since the close of the financial year the declared working profits had been as follows:—April, £896; May, £4,524; June, £6,352. The decreased profit for April was chiefly due to a falling off in the yield at the Central Mines. With regard to the ore reserves, as compared with the previous year there were increases of 92,519 tons (or about 22½ per cent.) at the Central Mines, of 3,400 tons at Elandsdrift and 36,221 tons (or about 71 per cent.) at Vaalhoek. The position of the two outside mines was satisfactory.

After a few questions had been answered the proceedings terminated.

† Rates lowered ½% on Jan. 2, 1918, and lowered ½% on Feb. 14, 1918, but raised ½% on Oct. 6, 1919, and ¼% on Nov. 6, 1919, and 1% to 5% on April 15, 1920.
‖ Lowered from 3¼% to 3% on June 5, 1918, but was raised to 3½% on July 31, 1919, to 3¾% on Oct. 6, 1919, to 4¼% on Nov. 6, 1919, and 5¼% on April 15, 1920.
* Changed from 4¾% to 4% on Dec. 27, 1917, and from 4% to 3½% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3⅜% (July 14 to August 15, 1919, period of daily sales); three months, 3½%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4½%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4½% to 5¼%, and the six months' rate from 5% to 5½%. On March 19, 1920, daily sales of six months' Treasury bills at 5½% were replaced by twelve months' Treasury bills at 5½%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5¼% to 6½%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

		Bombay via other ports	183,842
		Other countries	220
Total value of imports of gold	1,868,206	Total declared value of exports registered in the week	1,772,406

Messrs Samuel Montagu and Co. write, on July 29th, as follows:—Gold: The Bank of England gold reserve against its note issue is £121,473,630, a slight increase of £3,620 as compared with that of last week. A large amount of gold came into the market, and was taken for the United States of America and India. The export of gold has been prohibited from Canada except under licence. The keen demand for gold from the Indian bazaars suggests some interesting reflections. First, if it continue with the same energy, a time might arrive when there might not be much, if any, to spare for discharging in gold our debts to the United States of America; second, the Scandinavian countries are now feeling the effects of the policy pursued by them during the war of declining to receive gold when it was available. Now that their balance of trade has become adverse, gold cannot be spared to finance imports. The objection to accepting gold was not the fear of inflation, but lest the State banks would be compelled under their charter to hold large accounts of gold without obtaining corresponding profit. Silver: The Indian bazaars seemed to have been seized with a metallic fever, for, beside the inquiry for gold, orders have been received this week for silver irrespective of such remittances being of a paying character at the Indian rates current. As a consequence prices here have been jumpy, even though, at the higher figures quoted, some American supplies have come on offer. The Continent has sold of late but sparingly. According to the Tientsin *Evening News*, rich silver mines have been discovered in the Province of Kirin, between Tienpaoshan and the River Tumen. The construction of a light railway for the conveyance of the ores is proposed. The preference of the public for metallic money, not necessarily gold or silver, is exemplified by the fact that the new nickel money issued in France disappears as soon as it is issued.

NOTICES.

The directors of the London Joint City and Midland Bank, Limited announce with regret, which will be shared by all Mr Darling's many friends, that in consequence of his health not permitting him to continue his duties as joint managing director, Mr J. F. Darling has retired from that position. Mr Darling retains his seat on the board, Mr E. W. Wooley, one of the joint general managers of the bank, has been appointed joint managing director.

It is announced that Sir George John Marjoribanks, K.C.V.O., the Right Hon. Lord Avebury, Mr Ronald Malcolm, and Mr John Robarts have been elected directors of the National Provincial and Union Bank of England, Limited.

The Bank of Nova Scotia will open a branch in London, at 55 Old Broad street, E.C., on August 3, 1920. It is the second oldest bank in the Dominion of Canada, having been incorporated in 1832, and it now ranks as one of the largest, being in possession of total assets exceeding $230,000,000. The authorised capital is $15,000,000, of which $9,700,000 is paid up, and the reserve fund is $18,000,000. The bank has now over 260 branches between the Atlantic and Pacific coasts of Canada, in addition to which there is an extensive chain of branches in Newfoundland and in Jamaica. It is also established in Cuba and Porto Rico, also at Boston, New York, and Chicago, and at the present time offices are being opened in Santo Domingo.

The Canadian Bank of Commerce announces that branches of the bank have been opened at Dover Centre; Princes and Clergy streets, Kingston, Ontario; Stafford street and Grosvenor avenue, Winnipeg; St James, Winnipeg, Manitoba. The branches at Port Greville, Nova Scotia, and Cedar Springs, Ontario, have been closed.

The Standard Bank of South Africa, Limited, announce the opening of a sub-branch to Prieska branch at Niekerkshope, Cape Province.

Branches of the Merchants' Bank of Canada have been opened at the following points:—London, Market Branch, Ontaria Unionville, Ontario.

The New York office of the Banco Nacional Ultramarino was opened for business at 91-93 Liberty street, New York, on Monday, July 26th.

(a) Increased capital.

GREAT CENTRAL RAILWAY.—The interim revenue statement for the half-year ending June 30, 1920, states that it is resolved to pay the dividends for the half-year on all preference stocks down to and including the 4 per cent. preference stock 1889. The payment of such dividends will be made: South Yorkshire rent charge stocks, on August 16th; other stocks on August 26th.

Reports and Notices.

We are informed that Mr John Critchley Rimmer, sub-manager of the Liverpool and London and Globe Insurance Company, has tendered his resignation, as from September 30th next, after nearly 48 years' service with the company, which the directors have accepted with very great regret. Consequent upon the resignation of Mr Rimmer, the directors have made the following appointments, as from October 1st next:—Mr Hugh Lewis, at present London manager, to be deputy general manager of the company. Mr F. Reddrop, at present assistant London manager, to be sub-manager of the company. Mr W. R. Macready, at present an assistant secretary at the head office, to be London manager in succession to Mr Hugh Lewis. Mr Alfred George Dent, the secretary and general manager, has asked to be relieved of his duties as from December 31st next, to which the directors have agreed with very great regret. To succeed Mr Dent, as from January 1st next, the directors have appointed Mr Hugh Lewis to be secretary and general manager. These changes will involve Mr Lewis' migration to Liverpool, which will be greatly regretted by all those with whom he has come in contact in the course of his distinguished career.

Sir Arthur Fell, M.P., has been appointed chairman of the African City Properties Trust, Limited, in place of the late Mr Alexander Davidson.

Sir Halford J. Mackinder, M.P., chairman of Electro Bleach and By-Products, Limited, and Mr E. G. Cubitt, J.P., have retired from the board of that company, the exchange of shares with Messrs Brunner, Mond and Co., Limited, having now been carried through.

Messrs Price, Waterhouse and Co. announce that the firm of Messrs Monkhouse, Goddard, and Co., chartered accountants, of Newcastle-upon-Tyne (including Messrs Armstrong, Harrison, Swan, and Co., of London), has recently been amalgamated with theirs, and that the offices of the two firms at London and Newcastle have become merged. Mr William F. King, O.B.E., A.C.A., and Mr T. P. Parmeter, F.C.A., who have been associated with Messrs Price, Waterhouse, and Co. for a number of years, will join the firm at Newcastle.

We are officially informed that a contract has been entered into by Messrs Joshua Hoyle and Sons, Limited, for the purchase of the whole of the share capital of Messrs Peter Todd and Co., Limited, Victoria Mills, Wheelton, near Chorley. The mills contain 30,000 spindles engaged on fine counts and 1,140 looms making fine cambrics, brocades, and other special cloths. The purchase carries with it practically the whole of the village of Wheelton, including over 100 cottages, shops, school, and other public buildings.

THE DOMINION BANK.—The London branch reports the profit of the institution for the half-year ending June 30th last to have been $566,229, as against $553,698 for the same period last year.

MISCELLANEOUS.

ASSOCIATED PROVINCIAL PICTURE HOUSES.—The report for the year ended May 31, 1920, states that trading shows a profit of £43,438, which together with £975 brought forward makes available £44,413. The directors have placed to reserve for depreciation of properties £1,814, to reserve for depreciation of plant and fixtures £2,020, to preference share dividend £551, leaving £40,027. The directors recommend a dividend at the rate of 7½ per cent. for year on the ordinary shares, which with £625, the participation payable to the debenture holders, makes a total of £9,598, leaving £30,429 to be carried forward.

MANCHESTER SHIP CANAL.—The directors are glad to be able to announce that the result for the half-year to June 30, 1920, shows a substantial increase in net revenue over the result of the corresponding half-year in 1919. The improvement is due to increased traffic.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Unsettled weather, together with further rains and a generally low temperature, again prevailed over a greater part of the United Kingdom during the past week. In Southern localities, where climatic conditions appear slightly better, harvesting is already in progress, but otherwise operations will be somewhat delayed. The excellent prospect previously entertained is now lessened, cereal crops being badly beaten down by storms and heavy rains of the past few weeks. The balance of the hay crop left out has greatly depreciated in quality, and although large quantities were stacked during fine intervals, a good deal still awaits the opportunity to carry in. Root crops are also suffering from excessive moisture, and blight is noticeable amongst potatoes, especially in Lincolnshire, where the disease is reported to be rapidly spreading. A spell of warmth and sunshine is urgently needed to ripen the corn and hasten harvest operations. Native wheat remains more or less nominal, nothing being offered on this market, and only very small supplies were available at some of the provincial centres. Liberal supplies of imported, however, continue to be released, comprising Australian, Plate, and North American grades. Although shipments were on a lighter scale, prospects of future supplies are satisfactory, any adverse effects occasioned by inclement weather here and in Western Europe being more than counterbalanced in the favourable reports from the great exporting countries. In the United States the yield of winter wheat is exceeding previous forecasts and a large outturn is assured. Spring sowings show signs of rust, though the damage is not severe, and latest estimates show an increase on last Government forecast. Canadian prospects hold good, with beneficial rains in the Western belt. The wheat situation in Argentina has improved by recent rains, while reports from Australia and India point to the general crop outlook as favourable. The flour trade remains quiet respecting G.R. grade, but imported is being released more freely, and bakers are now fairly well stocked. Low-grade flour meets a quiet sale at late rates. English G.R. quoted 63s 6d ex mill, and imported 65s 9d per sack of 280 lbs, ex store. Maize continues in quiet demand on the spot, but prices ruled firm owing to reduced offerings and higher c.i.f. rates, occasioned by dearer freights, moderate shipments, and small arrivals from Argentina. Towards the close of the week, however, values gave way in view of cheaper tonnage offers. Plate, ex ship, quoted 66s, and ditto landed 77s 6d to 78s per 480 lbs. African maize meal, landed, £18 per ton. In the forward market, Plate parcels afloat, sold, 65s; August-September, 64s, 65s 7½d, 62s 6d, 63s 3d, and 60s 6d per 480 lbs. Barley ruled firm on the spot for grinding sorts, malting being nominal. No. 4 Canada Western, ex ship, 74s; ditto, landed, 81s 6d; American feed, landed, 73s 6d; Canadian feed, 74s 6d; American malting, 82s; Morocco, 78s, all landed. On c.i.f. terms a sailer 10,000 qrs Plate, prompt shipment, changed hands at 73s 6d per 400 lbs. Oats ruled firm, but generally quiet. English white quoted 72s 6d-77s 6d; new grey winter, 62s 6d per 336 lbs. Scottish, 75s to 80s; Plate, 61s 6d to 62s, landed. On c.i.f. terms, prices were somewhat irregular, and sales occurred in River Plate, f.a.q., June-July, at 52s 3d; July-August, 49s 3d, 49s 9d, 48s; August-September, 47s 9d, 47s per 320 lbs. Beans dull. English spring, 100s-105s; new winter, 92s 6d-95s per 532 lbs. Peas rather steadier. English blues, 105s-125s; duns, 90s-95s; maples, 130s-135s per 504 lbs. Japanese marrowfats, 25s cwt. English rye on rail, 86s to 88s per 504 lbs. Oatmeal, Scottish, £40 to £44; American, £34 to £36 per ton. Homeward grain freights showed more activity from the River Plate, and several charters were concluded, Rosario to U.K. maize, September loading, at 100s; though later 90s was the indicated value. Clipped oats from Bahia Blanca, home, paid, 107s 6d, and unclipped oats 117s 6d. America and

Canada fairly steady, with moderate chartering at 12s to 12s 6d Gulf to U.K., 11s 6d Montreal, and 10s 6d American Northern Range ports. Bombay and Karachi paid 80s two ports on dead weight, with 135s from Manchuria for wheat and beans. Australia nominal. From the Danube steamers have been placed at 57s 6d to 62s 6d U.K/Continent and 47s 6d Genoa. Time charter dull, and rates weak, especially for large steamers.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1919-20, contrasted with 1918-19, 1917-18, and 1916-17.—(Particulars of imports of wheat and flour temporarily discontinued):—

	1919-1920.	1918-1919.	1917-1918.	1916-1917.
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.

THE IRON AND COAL TRADES.

Our Glasgow correspondent writes:—It was arranged a fortnight ago that, after the holidays, work should be resumed in the various industrial districts in the West of Scotland on Tuesday forenoon of this week, but a very poor beginning was made. Blast furnaces have been running throughout, and some accumulations of raw material have been effected. This should help things in the steel works (at the rolling mills) and ease the shortage in manufactured supplies, so keenly felt just before the interregnum. Makers in all departments report that over the holiday period a very strong demand has been in evidence for Scotch pig-iron and steel (in all their sections) from both home and export buyers anxious to cover requirements on to the end of the year. No great effort has been made to meet this inquiry, especially as applicable to foreign shipments, for the main reason that producers are already almost wholly committed in respect of outputs for months to come, and as regards deliveries are (practically without exception) seriously behind. Probably a corresponding period was never entered on with books so full as they are at present—all that is wanting to assure intense prosperity being, it is said, liberal supplies of material and labour peace. The highest prices of the year are more readily commanded than was the case lately, and there is less talk of proposals for cancellation of contracts. Boiler plates are strong at £30 10s, ship plates £26 to £33, angles £25 10s, rounds and squares £30, forging slabs £27 15s, black sheets from £38 10s to £44. Black sheets ranged from £20 to £21 a ton seven months since. Supplies of steel scrap are more plentiful. Ores are the turn easier. The coal trade has not settled down to business, though the miners began to go down the pits on Monday. Where they can, large consumers are aiming at laying down stocks. A fleet of steamers is laid up at the local ports waiting on cargoes.

Our Sheffield correspondent writes:—The paucity of new buying in the steel trade continues, and with the holidays at hand this feature is more pronounced. The works are still busy on old orders, and some have plenty on their books to last very long periods, while early delivery of a number of running sizes is as difficult to obtain as ever. At the same time the pressure on works is somewhat easier, and makers are getting anxious about the future. There is a general lack of confidence in the situation, although some people look for a revival of buying in the autumn. Expectations of a drop in prices have not been realised, as on the whole quotations for iron and steel remain at the high level of the past. The reaction is being experienced in both the home and overseas markets. The iron market is still very strong, as the make of pig-iron is insufficient for either the steel or iron trades, and users are compelled to go abroad for basic pig. Hematite iron is also in short supply. The crucible steel is suffering badly from a lack of orders and shortage of work as well. The unsatisfactory state of the automobile industry is reacting upon a number of local steel houses who specialise on steel suitable for motor construction. "Tightness" of money is another awkward feature of the trade situation. The drastic reduction of bank overdrafts is embarrassing even firms of good financial standing, and it is feared that the policy will check the production of work for stock. The coal market is unchanged. Firms are putting cobbles and small fuels into stock so as to be prepared for contingencies, the reduction of exports having improved the supply. Orders for house coal are steadily increasing. Consumers who had held back their orders in the hope of the Government renewing the rebate are now buying. Prices current at pits are:—Best South Yorkshire hards, 33s 2d to 33s 8d; ditto Derbyshire, 32s 8d to 33s 2d; Tyne steams, 150s for export; steam cobbles and nuts, 31s 8d to 32s 2d; hard slacks, 28s 5d to 28s 11d; small slacks, 23s 2d to 24s 2d; branch, 37s 2d to 37s 8d; Silkstone, 33s 8d to 34s 8d.

Our Middlesbro' correspondent's report, dated July 29th, is as follows:—Pig-iron.—Market firm and supplies of Cleveland foundry iron scarce. Output slightly increased by the blowing in of one blast furnace. There is still no Cleveland iron available for export. Good demand for hematite pig-iron, the output of which is practically sold for this year. Prices are unchanged at 217s 6d per ton for Cleveland No. 3 and No. 4 Foundry G.M.B., and 260s per ton for mixed numbers East Coast hematite. Manufactured iron and steel.—Plenty of home demands for steel. Rails £2 dearer, otherwise prices unchanged. Steel ship plates, home, £23 10s; steel ship angles, £23; iron ship angles, £30 15s; iron bars, £30; steel rails, £25 net. Iron ore.—Business very quiet. Consumers have not yet come on again.

CUMBERLAND IRON.

(FROM OUR CORRESPONDENT.)

There is an easiness in the Cumberland and North Lancashire hematite pig-iron market which has been absent since Government control ceased. There has apparently been reached the point beyond which users believe values cannot soar if they are to pursue remuneratively their own activities at a later stage. Whatever buying is taking place, therefore, is on a conservative scale, and the business passing is not of a large extent. Makers, for their part, are equally resolved on cautious commitments, and feel themselves still in such a strong position that they accept nothing short of the official quotation of £14 15s. per ton at works for Bessemer mixed numbers, and attach the usual reservations that have been in force in contracts since 1919. The important point to remember is that whereas during the war the capacity of the steelworks plants was enormously increased, that of the ironworks remained at a standstill, and the number of furnaces for which blowing power is available is the same to-day as it was in 1914. Any slackness in the steel trade, therefore, cannot very well be reflected in the iron trade for another eighteen months to come, and it will be surprising if much, if any, diminution in production becomes necessary before the expiration of the period. As a matter of fact, at the present time the demand is substantially in excess of the supply, high-class steel manufacturers in South Wales, Scotland, and the Midlands absorbing the bulk of the low phosphorus iron, and the local steelworks the greater part of the make of ordinary iron, though now and again there is a small shipment of metal to the Continent. The number of furnaces blowing between Workington and Carnforth is still twenty-seven. There is a steady inquiry for manganese alloys at the officially quoted prices. Prospects are rather poorer in the steel trade. There has been a falling off in the requirements of tube and strip steel, and those of railway material will not suffice to keep the mills in full employment. Inquiries are numerous enough, but little business results, and it looks as though there may be some curtailment of operations before the winter is at an end. The drop in freights has not so far affected prices in the local hematite iron ore trade, but owners have been pressed to make a reduction corresponding to the decrease in Spanish ore prices. The whole of the production at the pits in the Cleator, Egremont, and Hodbarrow district is being taken by the Cumberland and North Lancashire furnaces, and none can be spared for the East Coast. There has been an improvement in coal production, but even so the output is inadequate to meet needs, and Northumberland and Durham coal has still to be imported, the shipments of Cumberland coal to Ireland rarely rising above 7,000 tons per month. Almost the entire make of the 390 by-product ovens is going to the furnaces on ordinary iron. None is being shipped to the Continent, but about 1,500 tons per week are going to Lancashire. By-products are in firm demand, and the make is insufficient to cope with requirements. The chemical works are busy. The scrap iron trade is duller and prices show a tendency to sag.

THE COTTON TRADE.

MANCHESTER, July 29.

The market this week has been quieter. Buyers have been less disposed to place orders freely, the change of attitude being largely due to the easier movement in raw cotton rates and the distrust of current prices for manufactured articles. Some merchants are of opinion that there is little probability of a healthy trade being done on the present level of values, but it is hard to see how any definite fall in the near future is to be brought about. A considerable inquiry has again been experienced in cloth for India, and a fair turnover has taken place in bleaching and printing descriptions, but grey staples remain slow. There has been an absence of demand for China, and only odd lots have been put through for Java. A fairly encouraging turnover has been reported for South America. Most shippers to the Near East have looked on. There continues wide variation in the quotations of manufacturers. Less activity has shown itself in American yarns for home use, but prices all round have been fairly steady. Export yarns for India and the Continent have been in moderate request, but not much business has been done. Irregular operations have occurred in Egyptian spinnings.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says: The market remains very quiet, and prices are irregular. Some small weights of tops are being bought, but in many cases forced sales are made on account of financial stringency, and prices cannot be taken as a fair guide to market values. Good average 64's tops are still quoted around 7s to 7s 6d, but all quotations are more or less nominal. Really superior combing merinos are scarce, and it is worthy of note that at the Government sale in Liverpool yesterday the best merinos and fine crossbreds were selling on a par with closing values at the last series of auctions in London. There is a little more inquiry for yarns, and spinners are inclined to meet the market when actual business is offered. Two-fold 48's out of 64's tops may be quoted around 14s 6d. A good deal of interest is being taken in the negotiations which are being conducted in this country and abroad with the object of rehabilitating the Continental textile industry. Several firms interested in cotton, wool, and flax are endeavouring to arrange for raw materials to be supplied to the mills in Central Europe and in other countries where the need is great, but purchasing power is restricted, and as the scheme is based on gold currency, it is hoped that the financial difficulties will be overcome. A conference was held at The Hague last week, at which financial houses of standing in this country, the United States, France, Holland, Germany, Austria, Szecho-Slovakia, Spain, and Belgium, were represented, and further conferences are being arranged in this country and on the Continent.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

There still seems to be a fair amount of rain about over considerable areas in Australia, all of which should help to improve the clip which will shortly begin to be shorn in very good earnest. Over large areas it is expected that the clip will be tender and mushy, and devoid of spinning quality, drought always leaving a distinctly evil mark upon the staple.

I understand that already Bradford importing topmakers are to some extent gambling on the future, and 64's tops have already been offered on a basis of 6s for January delivery. This is adopting pre-war speculating tactics, a line of operation with which the trade was familiar before August, 1914. Some firms are prepared to take what appears to be a reasonable risk, and unless there is a radical change in the demand for the raw material, I think that 64's will be made at that price. It is common knowledge that Australian growers are quite prepared to sell their new clip at the appraisement prices of the past three years, and if this is the case, 64's can be delivered in Bradford at the price named. What concerns a large number of topmakers is the class of raw material that will be available, the majority fearing a deficient clip, in which case length and soundness of staple will no doubt be at a premium. Last week I called attention to the large quantities of weak stapled wools which have been catalogued during the past two series, and which even Continental buyers are averse to purchasing. Some distinction should be made in outlining market conditions in speaking of these wools, the belief being general that for really good sound merinos the future will see to-day's prices ruling. One cannot consider London sales' values at the recent autcions for warp merinos and observe the prices being accepted on Bradford exchange to-day without being convinced that there is a "screw loose" somewhere when such a pronounced disparity obtains between the two centres. It is a fact that 64's tops were costing anywhere between 8s and 9s 6d last series, and yet we heard of 64's tops being offered as low as 6s 6d. There must be some important financial consideration entering into such offers, and yet even these low quotations do not call forth any serious sales. Bradford somehow is at present experiencing an unprofitable time, and it is a rather good thing that the majority of firms will be able to make up their present losses out of E.P.D.

An important conference has taken place at the Hague at which large representative firms from Bradford, France, Germany, Austria, Czecho-Slovakia, and even Russia were present. I am able to say that even important firms in London are determined, if humanly possible, to bridge the present gulf which is preventing profitable trade being done with Central Europe. That area to-day is in dire need of wool, and it is to be hoped that in a few weeks arrangements will have been made to supply both German and Austrian mills with raw material, which should be for the good of the entire trade. What is wanted to-day is a broader basis of competition and Central Europe can supply it.

GOVERNMENT COLONIAL WOOL SALES—AUGUST-SEPTEMBER (P) SERIES, 1920.

The following are the approximate quantities to be offered in London on inspection during the "P" series commencing on August 24th :—

	Bales.
Australian—Greasy merino combing	41,000
Do clothing	500
Do carbonising	900
Do carbonising (lambs)	500
Scoured merino combing	3,500
Do clothing	4,000
Do carbonising	600
Greasy crossbred combing	18,000
Scoured crossbred combing	2,400
Do lambs	200
Do carbonising	400
New Zealand—Greasy crossbred	10,000
Scoured do	4,000
Slipe do	4,000
	90,000

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

At the time of writing, ox and heifers and cow hides have not been sold at the public auction of hides and skins held to-day in Bermondsey, owing to the poor demand. In regard to those classes that were disposed of, prices had a tendency to be erratic, bulls and kips being slightly firmer, while calf skins were slightly lower as compared with last week's figures. Pelts made from 2d to 3d per skin more, while lambs changed hands at last week's prices. There has been a slightly better inquiry for foreign hides, although the fall in market hides retarded business. A sale of 4,000 frigorific Smithfields is reported on a basis of 17d c.i.f., February-March kill, and 3,000 May-March kill at 16d; 18¼d has also been made for 3,000 Liebig Colons, March-April kill. The Continent is also again inquiring for hides in store, whilst at this week's Paris hide sales the downward ten-

dency was checked, and orders for calf from England were not executed owing to price limits.

Little has been done in leather this week owing to the proximity of the holidays. Filling-up lines of good-class bends have been the chief inquiry, but tanners seem very anxious to unload large blocks of common bends made from dry hides at reductions in price. Upper leather is quiet, and dressers, as a rule, are not forcing sales, although here and there are weak holders who at times slaughter prices.

Shoe factories will be all closed next week as stocks are still large, and manufacturers short of ready money in consequence. The holiday demand has not been very good, and little is expected in the way of improvement until the autumn.

Walsall and Birmingham report slack trade in saddlery, harness, travelling, and fancy goods, and unemployment is increasing.

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

Though prices later have been inclined to irregularity, linseed oil has shown some strength, spot oil being about £2 10s per ton dearer on the week at Hull. This has been contributed to by the comparative scarcity of raw oil on spot or offered for early delivery, coupled with a fair consumptive demand. On the other hand, the September-December position has shown weakness, owing to bearish influences, as low as £71 15s having been accepted, since when, however, a better feeling has prevailed, helped, no doubt, by the continued firmness in the raw material. Cotton oils exhibit a steadier tendency, crude being about £1 and refined £2 per ton dearer on the week. A somewhat better inquiry for crude rape oil is reported, but little is doing in other directions. Castor oil is quoted lower by Hull makers, with first pressure offered at £76, and second ditto at £71 (barrels included), ex Hull mill.

Very little is doing in the seed market. Plate linseed retains its firmness, but quotations are considered too high; hence crushers are holding aloof. Indian linseed is also dear, and prohibitive of trade. Cottonseed is in better demand, and prices of both Egyptian and Bombay have advanced from the low level reported last week. Though arrivals of oilseeds just now are not heavy, a fair quantity is on passage to the U.K., viz., linseed 26,200 tons, and cottonseed 22,100 tons; to the Continent, linseed 19,600 tons; and to the U.K. and Continent rapeseed 22,100 tons.

BY-PRODUCT TRADE.

(FROM OUR CORRESPONDENT.)

TAR PRODUCTS.—There is very little alteration in these products since my last report. The strength of pitch is still maintained, and quotations are now £9 10s per ton London and East Coast f.o.b., £9 5s. per ton West Coast, and £10 per ton in South Wales. Naphthalenes are scarce, and the coming demand from the firelighter industry will probably carry prices several pounds per ton higher, espectially in the case of crudes, which now sell at from £14 to £22; refined sells at £50, although there are reports of £60 having been paid; this probably refers to ball naphthalene. Solvent naphtha is slack on a lessened demand from the rubber manufacturing trade, and now makes only 3s 1d per gallon; heavy naphtha, on the other hand, is not plentiful, and the price remains about 3s 6d per gallon. Carbolic acid remains at 4s 6d per gallon for crude and 1s 3d per lb for crystals, and cresylic acid at 5s 3d per gallon for pale 97/99 per cent. quality, and 4s 9d for dark 95/97 per cent. material. Creosote remains firm at 1s 2d per gallon. Benzol at 3s for 90 per cent. and pure at 3s 4d per gall. Pyridine at 22s 6d per gall. The market in intermediate products is not quite so active, but most works are fully occupied. Aniline oil and salts continue in demand at 1s 10d and 2s per lb respectively, but salicylic acid (technical grade) is rather cheaper at 2s 8d per lb. SULPHATE OF AMMONIA.—Home orders are flowing in satisfactorily at the fixed prices of £24 for August delivery, and the demand for export remains stationary, with prices up to £50 per ton.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, July 30.

There was no new striking feature to record in most directions during the week, actual trading being restricted to a moderate compass, while the near approach of the August holidays exercised a baneful influence. Apart from this consideration, however, the markets are by no means cheerful, as financial stringency is felt, and which reflects upon export requirements.

SUGAR.—Market unchanged, with fair allotments made to the various sections. As regards free parcels, affairs have developed something resembling a deadlock, and quotations are nominal meantime. Some 2,000 tons cane, jaggery, sold, July-September, 49s; January-March, 48s; and March-May, 47s, c.f. and i. terms, London. American syrup, and also honey, only selling in retail quantities.

COFFEE.—A firm tone predominated with regard to qualities suitable for the home trade, which continue to receive chief favour. Export lots, however, still meet a slow sale. In auction, fine bold blue Costa Rica, sold, 160s. For future delivery, a dull tone ensued.

COCOA.—Only a meagre amount of business again resulted, and the general position remains nominal.

TEA.—During the week 32,900 packages Indian and 17,500 packages Ceylon were catalogued in auction, and while all the more attractive parcels met a good inquiry at full rates, demand for common proved less active at easy quotations.

RICE.—Market steady, and without new feature. Rangoon bran idle.

SPICE.—Pepper in better demand, and market firm. Fair black Singapore, spot, sold, 6d; ditto, August-October, 6⅝d to 6½d; Aleppy, spot, sold, 7d to 7¼d; Tellicherry, 7½d to 7⅝d; white Singapore, 11¼d to 11½d; Muntok, up to 1s. Cloves quiet, and Zanzibar, spot, sold, 1s 2d. Pimento nominally 4d. Tapioca steadier. Fair flake, spot, sold, 2¼d to 2⅜d; ditto, August-October steamer, 23s; fair Penang, seed pearl, spot, sold, 23s medium; ordinary Penang, 28s; fair from 36s to 40s. Small sago, spot, done 32s 6d to 36s, as to sample. Sago flour, August-October, sold, 21s. Farina, spot, 28s; August-October, 27s to 27s 6d. Desiccated coconut, fine cut, spot, sold, 65s; and medium, 70s to 71s. Broken Cassia sold, 50s to 55s.

JUTE.—Market very quiet, but rates steady in the absence of any undue pressure to sell. Native first marks, old crop subs, July-August, sold, £39 10s; new crop, actuals, August-September, £45 15s to £47. Hessians in demand to the River Plate, but U.K. market dull. 10 ounce, August-September, Plate, sold, 54s 6d to 54s; 9 ounce, ditto, 44s 6d. Twills neglected.

HEMP.—Manila quiet and easier. J grade, August-October, sold, £64 10s to £64; K ditto, £53 10s; and L at £52 10s. New Zealand idle. Italian nominal.

SHELLAC.—Market irregular. Spot trade was of only moderate extent. T.N., October, sold, 580s to 605s and 555s; August, 630s.

COPRA dearer under reserved offers and increased buying orders. F.M.S. Straits, August-October, London, sold, £48 10s to £50 10s and £49 5s; September-November, at £50 10s; Ceylon, August-October, £49 15s to £50 10s. Palm kernels irregular. August-October, sold, £34 to £35, and £33 15s.

MENTHOL.—Kob-Suz, spot, sold, 32s 6d; peppermint oil, ditto, 8s 9d; aniseed, 3s 10½d; slab camphor, 7s per lb.

EGG PRODUCTS better supported. Liquid yolk, old season's, spot, sold, 75s to 80s; August-October, 95s; liquid whole egg, spot, 85s per cwt. Dried yolk, spot, 9d to 10d; native dried whole egg, 1s; albumen, 4s 4d per lb.

RUBBER.—Market eased as buyers remain indifferent. Plantation crepe, spot, sold, 1s 9¼d; August, 1s 9½d; October-December, 1s 10¾d; January-June, 2s 0½d; sheet, spot, sold, 1s 8d; October-December, 1s 9¾d. Fine hard Para, spot, 1s 10d.

OILS.—Linseed firmer. Spot, net, naked, 78s; July-August, 76s 6d; September-December, 74s. Rape dull. Crude, spot, 70s; refined, 80s. Cotton firmer. Crude Egyptian, 62s; Bombay, 52s; refined edible, 85s. China wood easier. Hankow, spot (barrels), sold 105s; July-August, 90s; and Hong Kong, spot, 100s. Palm kernel firm. Crushed, spot, 71s; extracted, 70s. Palm firmer. Softs, July-August, 54s 6d; Lagos, 56s 6d. Coconut dearer. Ceylon, spot, 79s; July-August, 77s; Cochin, ditto, 86s. Soya firm. Oriental, afloat and July-August, 68s; deodorised, 88s. Japan fish slow, July-August (cases), at 40s. Cod liver steady. English, spot, sold, 50s. Ground nut quiet. English crushed, naked, spot, 75s; deodorised (barrels), 95s. Turpentine irregular and easier. American, spot, 160s; August, 156s; September-December, 143s.; January-April, 143s. Rosin slow. American, grade B, 45s; F, 56s; G, 56s; K, 57s; M, 57s 6d; WW, 59s; French, F/G, 53s; H, 53s; WW, 54s; extra pale, 55s; Spanish, c.i.f., London, grade F, 43s; extra WW, 47s per cwt. Petroleum steady, quiet. American, spot, 2s 1¾d; and water white, 2s 2¾d per gallon.

OILSEEDS.—Linseed market firmer, but quiet. Calcutta, July-August and August-September, sold, £37 10s to £37 15s; Bombay, July-August, quoted £38 10s. Plate afloat, Hull, sold, £33 10s to £34; July-August, £34; August-September, £33 10s. Rapeseed firm. Toria, July-August, Hull, sellers, £31 10s; real bold Ferozepore, £30; brown Cawnpore, £29. Cottonseed firmer. London Egyptian f.a.q., spot, quoted £17; July-August, £16 15s to £17 10s paid; Bombay, spot, old, Hull, sold, £12 5s; ditto, new, £12 15s to £13 5s; July-August, £13 10s. Castor seed inactive. Bombay, July-August, Hull, sellers, £28. Gingelly firm. Chinese, July-August, to Continent, sellers, £41. Groundnuts slow. Chinese, dry decorticated, June-July, £35 per ton.

METALS.—Tin continued in good demand at the week's commencement, being rather firmer, while cash fluctuated to £272 10s, end of September £275, and three months to £277, but an easier tendency prevailed at Tuesday's session, with dealings on a small scale, cash

GIRARD TRUST COMPANY

Capital and Surplus - $10,000,000.

Member of Federal Reserve System.

relapsing to £266—finally recovering to £267—and three months to £271. During the middle of the week, after an easier opening, active support led to an improvement, cash being closed at £267 to £267 10s, September dates moving to £269, and three months' to £271 10s. Thursday's market exhibited irregularity, with less doing at an easier range. Early August changed hands at £265, and three months' from £271 10s to £270. The tendency was firmer at Friday's session, while good buying prevailed throughout, cash advancing to £268 5s, and three months' to £273 10s. English ingots, £267 to £268. Copper: The standard market, though quiet, manifested a steadier tone until Tuesday, cash reaching £92 5s and three months' £94 10s; but a decline followed until Thursday on fairly liberal offers, cash moving down to £91, early September to £92, and three months' to £93 5s. Friday's market tended dearer, cash being done up to £92 5s, and three months' to £94 10s. Electros, £110 to £116; best selected, £107 to £109; strong sheets, £164. Lead firmer at £37 5s to £37 10s. Spelter steady at £41 to £42 15s. Antimony: Regulus, English, ordinary to best, £60 to £63. Wire bars dearer at £113 to £116.

TALLOW. — Messrs Colchesters and Woolner write on July 28th as follows:—The tallow market has been more active during the week, with prices fully maintained. The shipments from Australasia in June amounted to 4,000 tons. There will be no auctions next week. Quotations are:—Australian mutton: Fine, 65s; good to fair, 64s to 59s; dull to dark, 54s to 52s; hard, 64s. Australian beef: Fine, 60s; good to fair, 58s to 55s; dull to dark, 54s to 50s; sweet, 68s. Present shipment from Australasia: Mutton, fair coloured, 48 degs., none; and mixed, 43½, c.i.f., London, 58s. The market letter is unchanged. Town tallow, 59s per cwt. Rough fat per 8 lbs, 4½d to 1s 0½d; melted stuff, 42s per cwt. Quotations are:—Town: 54s net cash, naked, ex works. Country: Frail casks, 55s; home melted, shipping casks, net f.o.b., good coloured, none; fair to dull, 56s to 53s. Bone fat: White, none; pale, 51s; benzine, 45s; melted stuff, 45s, f.o.b.

THE MONEY MARKET.

THIS week's Bank return and currency note return show a situation which, in view of the time of year and the state of the American exchange, calls for serious consideration. Expansions of over a million in the Bank's note issue and of $4\frac{3}{4}$ millions in the currency note issue, combined with an increase of over 16 millions in the Government securities, and a consequent addition of over 14 millions to the total deposits, show clearly that inflation has been very far from checked. Special causes, such as holiday time expansion, have no doubt been at work, and it may be that the expansion is to some extent temporary.
